I wouldn't suppose it would be impossible to do. If you're listening to someone go into their voice mail, you can hear the tones they use for their password. Once you're in, you can do anything you want. I'm not an expert, but that's how I think it would work.

Can anyone post the public safety frequencies for Canoga Park, CA? I am not sure if they have their own police agency and do their own dispatching or are dispatched by a sheriff's department.

I appreciate any information.

Yeah, then the next thing that would happen is that the HAM bands would become a CB wasteland. Most CB'rs know enough to pass the tests, and when they do...The bands will be just like another CB band.

I agree with your comments. I had read about this person in a past issue of Monitoring Times. Fortunately, 20/20 didn't seize the opportunity to generalize about the hobby, as they so often do. They did make an error in the end of the show saying "older phones can be listened to by a scanner..." What the didn't mention (didn't know), is most new phones can also be listened to. Unless it is digital/spred spectrum, it is just as easy to listen to the 900 MHz phones. They also didn't mention how easy it was to modify the PRO-34 (shown on TV) for cellular monitoring. Probably just as well they didn't mention these other things...

The guy definitely had a mental problem and needed to be locked up. As a closing comment, 20/20 said he applied for a job with the phone company when he was released! Oh wonderful!

I'd be glad (as the author of MultiMode) to help get MultiMode running on PC's under Mac emulation.

Does it report any error messages when it starts up? Select About MultiMode... from the Apple menu, and click on the large icon - you'll get a screen with information about the sound input setup, and sound input capabilities of your particular machine.

Chris

Sorry Donna, what you see, hear, and read in the media is not always accurate - hell, sometimes it's not close.

We had a police stand-off with a kidnap victim very near my house 2 years ago and I happened to be at home where I could see the coverage and listen to the police TAC freqs....

The media gave the 2 million people in the metro area information that was completely untrue. I won't say it was a lie (damn close), but it was certainly
based on their impression of the situation - and way off the mark.

Thanks to the media we all saw what was happening, but I was listening to the authorities - and the pictures without the radio transmission was very
deceiving.

Myself and anyone who listening on their scanner were the only people outside
the authorities that really knew what was going on. And I was able to calm several
people in the neighborhood down who were very upset

I'm an Ex-EMT and based on the news coverage I should have been down there working triage and sorting out bodies. Fact of the matter is, the situation was
covered as well as could be expected and instead of getting praise, the police
and EMT/Fire responders caught alot of flack and people were hysterical at level
that was unnecessary... I'd say monitoring that situation worked out pretty good
all around.

I'm trying to find an old friend who's a truck driver, I've lost contact with him, but I need to talk to him urgently about something
very important, he's name is Victor Sanchez, he's original from Colombia, 38 years old, about 5 or 6 feet tall and around 160 pounds
of weight, he's Hispanic.
Is there anyway that someone here could send a message using a radio with the same frequency or whatever the truck drivers use to help me find this guy?
The last time I heard from him, he was living in Texas, I believe somewhere around Galveston, but I'm not sure. It could be anywhere on Texas. His personal car is a 92,93 or 94
Geo Storm, light blue color, hatchback type. The only thing I have left are some pictures that I can e-mail on request, in two of them he's standing up right next to a black Kenworth truck, with the name MC Van Kampen Trucking Inc. on it, and truck number 559, Michigan license plate RM 2957. If you know Victor, please e-mail me with information on how to get back in touch with him, my e-mail is as follows: aplaza@superlink.net
Your cooperation regarding this matter is greatly appreciated, it is really important that I find him as soon as possible.
Thanks,
A. Plaza

I am one of the people that enjoy working cw. However, I have to agree that it is an outdated mode of communication. The military does not even use the mode any longer.
The way I see it, either get rid of the requirement or limit the highest speed to around 10 wpm. Then make the written more technical. Get into circuit design. Don't just tell us what a diode does. Have the test reflect why it is in the circuit. I'm not saying have someone design a radio. After all, why would we build a radio when we can go down and buy an ADI rig for $150. But we do need to understand, for instance, why an antenna for one band is a particular length. Or what a compressor is used for in a SSB radio AND how to use it correctly. Or how about how to select the proper feedline for your antenna and why? These are things that are touched on but the test material does not really go into depth into why things are done the way that they are.
If people think that cw is a way to keep out the yahoo's, go down to 80 meters and listen around. It didn't work. I doubt that anything that the FCC would do to change the testing will keep poor operators off of the air. But if we are going to drop the cw requirement, we need to add something to the written portion of the test to take it's place. Perhaps even a higher percent pass requirement? 95%? Just a thought.

Cecil,

DOS isn't really an "operating system" ... it's more like
a non-reentrant interrrupt handling virus :-)

(Of course Win 9x isn't *much* better)

A few years ago, i was having dinner and ther was an incident at LAX involving US-AIR and Skywest. naturally, i had my scanner with me like I always do.

There was activity on the TV and radio news frequencies, Airline company frequencies, air traffic control, airport operations, airport fire/safety, city fire/ems, and city police

now, I often have two scanners with me...this way I can monitor different sets of frequencies. In cases like air disasters, two come in handy.

Saw it. It wasn't nice. Very little was said about how easy it is to monitor the phones. All they did was to show a portable scanner monitoring a cordless phone. Now the general public is scared of anyone with a scanner. They had one brief (ten second) clip of a reasonable use of a scanner and the rest of the 20 minute story was all about some idiot who was convicted of harassing his neighbors using a scanner.

This is why our rights as radio listeners are being flushed away by the likes of CTIA, Congress, and ABC news.

KS/MO Column 06-99

Open up some space on your hard drive, 'cause this one is a biggie. Of course, I yak a bunch at the startï¿½but it still has lots of good information for both sides of the state line. I had more to put in the column this month, but I simply had to stop somewhere. I guess that way the July column has a head start.

1. Storm frequencies for Wyandotte/Johnson Counties, KS
2. DEA is on the air
3. A REAL list of talkgroups for KCMO, Overland Park, and Prairie Village Ericsson systems
4. Overland Park on 866.5125 Mutual Aid this morning
5. KHP centralized dispatch taking more dispatch shifts
6. Quick lesson on trunking, simulcasting and multicasting
7. Some Fed stuff for the east part of KS, west part of MO
8. The find of the year! Shawnee Mission Baseball radio on local trunked system! ï¿½yawn
9. KHP Wichita question
10. Missouri Water Patrol question

My CE-232 computer interface blew up a few months ago. A CE-232 is a product offered by Commtronics Engineering (Bill Cheek.) Lois, my wife, got tired of me plodding around the house bearing a look of eternal gloom, and let me buy another kit. Just like my first one, it fired up the first time I lit it. But much to my dismay, after a couple of days my NEW interface crapped out! The curse words uttered by me immediately faded the paint on the walls and denuded all of my wife's house plants. I apparently destroyed a second unit.

After repainting the walls and buying new houseplants and poking blindly around the innards of the dead interfaces, I uninstalled the software, reinstalled it, and tried it again. Lo and behold, it worked! I hooked up the first CE-232ï¿½and IT worked as well! After talking with the application developers, it was determined that I have a unique software conflict within my computer system. It'll be easy to fix.

I told that whole story so I could plug the CE-232 and the ProTurbo software to all of you. I have NO personal or financial interest in either outfit. Simply, both products impressed me and I think everyone should be equally impressed.

The CE-232 works only with the PRO-2004,5,6 line of scanners. The thing obviously controls the scanner - autoprograming, unlimited number of frequency lists - a neat screen, etc., like all the other interfaces, so I won't go into details on that. What it does have that is unique is a very powerful "scripting" feature that allows one to write little programs for it. Scripts are very good for performing routine, redundant tasks like locking out all channels with a frequency of "zero"

or any other function requiring several zillion keystrokes...but that is just the beginning.
Imagine you are sitting by your scanner when a special frequency becomes active. Desperately, you begin burrowing through your very neat and orderly pile of lists in order to program a bank with related frequencies. Time is tickingï¿½good things are being missed on the radio. Once you get the correct list you still have to enter it. Beepï¿½beepï¿½beepï¿½beep. Minutes go by, and once you get the stuff entered (and lots of good traffic has past) you fumble for the recorder. "Where is that blankety-blank cord?!?!" More time passes. At last you get the recorder hooked up just as you hear the dispatcher say, "Officers advising everything is 10-4, clearing the air for normal radio traffic." Ever happen to you?
I wrote a script that does all of the above for you. It takes about 30 seconds for the script to go through its paces, and it is smart enough to do it WHILE YOU ARE GONE! You tell the interface which frequency will the be target, which list to enter when it becomes active, to start recording (which can be done digitallyï¿½no nasty old cassette machineï¿½see below,) and when to undo all of it and go back to normal scanning. It isn't restricted to one target frequency or frequency list. You can put in as many as you like.
The software I prefer is called ProTurbo. It is a Windows application, and works great. It has two features that stand out above all. The first is the digital recorder. Once a simple patch cord is run from the scanner to the computer's sound card, you can record traffic on the hard drive. Not all frequencies must be recorded, though. You have the option to select which frequencies are recorded, and which ones are not. Pro-Turbo creates a log of recorded frequencies and allows you to play back the whole recording session, or you can opt to listen to traffic from a particlular frequency. It is very agile system, and you can imagine the possibilties for it.
The second unique feature are the eight A/D (analog to digital) converters on board, which are essentially little voltmeters. They can measure a voltage from 0 to 5 volts with a resolution of 0-255ï¿½0 being no voltage and 255 being 5 volts. My old signal strength meter had 10 LEDs on itï¿½meaning a resolution of only 10. I prefer 255. The meters are cool little analog dials on the screen. Seven more converters exist for whatever you could desire to measure. The readings from all A/D converters can be logged to a file so you can check them out later.
The Pro-Turbo/CE-232 combination has gobs of other features. I suggest you check them out at the following web sites:
http://www.comtronics.net/
http://www.iaw.on.ca/~jabba/pro-turbo.htm
Pro-Turbo costs about $50, and a kit for a CE-232 runs about $99. The CE-232 kit has the parts to build the basic interface. You need to buy a box, wire, a handfull of computer cables/connectors, some miscellaneous things and stuff. I suppose you might have to put out about $40-50 dollars more if you have to get it all. The CE-232 installation is not for the faint of heartï¿½you essentially take the whole dang thing apart, solder a number of wires here and there, and put

it all back together again. The manual is extremely detailed, and every conceivable step in the process is included. With proper tools and patience, anyone could do it. You can ship your radio to Bill Cheek to have him install one, but it gets rather expensive that way. You decide. I love mine, and wouldn't be without it.

Last month I mentioned that anyone with frequencies for storm spotters and related agencies should send them in for this month's column since there was surely enough spring and summer left for bad weather. Within a day or two of mentioning that, tornadoes hammered parts of Oklahoma and Kansas. I'm sure glad I didn't ask for frequencies for volcano or earthquake activity!

All kidding aside, here are some freqs that Chuck sent in for the Wyandotte/Johnson County area.

1. 155.895 Wyandotte County
158.820 MERS (Metropolitan Emergency Radio System)
147.210 Wyandotte County RACES
145.470 Johnson County RACES (?)
"On 442.55 we have a 2 meter/440 remote base that we use to track the storms from the west. The rptr is on the Gibbs Water Tower at 51/ Gibbs Road in KCK. The BPU Amateur Radio Society sponsors it. Hence the call WR0BPU."

Thanks, Chuck.

I swiped the following list from Dr. Sm0ke's web site, but I think Dr. Sm0ke swiped it from one of the columns last years, so we are even. ;-)

County Frequency

Kansas

Johnson 145.470 -
Leavenworth 147.000 +
Jefferson 147.060 -(100.0) & 146.835 - zone 14 ARES
Jefferson 158.820 (100.0) Firecom, repeated
155.685 (100.0) E P, simplex (new listing)
Linn 147.285 +
Miami 147.360 +
Wyandotte 147.210 + 442.550 + (186.2)
Shawnee Radio Club 145.210 -

Missouri

County Frequency
Buchanan 146.850 -
Carroll 146.655 -
Cass 147.120 +
Chillicoth 147.225 + ...(Reception within 16 Co. area centered on Chillicothe)
Clay 146.790 -
Henry 147.195 +
Western Jackson 146.970 -

Eastern Jackso 146.700 -
Johnson 146.880 -
Lafayette 146.775 -
Macon 146.805 - ...Macon, Linn, Randolph, Adair, Knox, and Shelby
Counties
Platte 147.330 +
Pettis / Sedalia EM 154.100
Ra 147.375 +
City of Independence 145.310 -
City of Raytown 145.170 -
City of Belton 147.015 +
City of Belton 155.145 (EP)

For the Kansas City area on the Kansas side the list is as follows:

Johnson County EP 153.995 (151.4) repeated
Wyandotte County EP 155.895 (131.8) repeated
Miami County EP 39.640 simplex
Leavenworth County EP 155.820 (d114n) repeated
Douglas County EP 155.805 (107.2)repeated
Douglas County Skywarn 155.760 (107.2) Simplex
Douglas County Skywarn 155.160 (107.2) Simplex
Franklin County EP 155.835 (136.5) Repeated
Franklin County EOC 453.250 (94.8) Repeated (The EP freq is the primary
since they don't have
many UHF portables yet.)
Jefferson County EP 158.820 (100.0) repeated
Jefferson County EP 155.685 (100.0) simplex (new listing)
Civil Air Patrol 148.150 repeated
M.E.R.S. 158.820 (151.4) repeated

-
2. Bill checks in with a tidbit for you Fed listeners. "The DEA
repeater on 418.9000 - 156.7Hz (PL tone) is in use in the clear quite a
bit lately. I'm finally hearing more Fed communications. KC is talking
to 'St. Louis Base' on it. I wonder were that repeater is actually
located?"
I don't know either, Bill. Anyone out there have any ideas:

-
3. John sent an e-mail to me about last month's column and the listing
for KCMO EDACS system. My list was less than complete, due mainly to an
"operator assisted computer crash." I had been using ETrunker for a
long time, and had a respectable database of groups and IDs. In the
midst of re-installing Windows I failed to properly back up some of my
files. (Do you folks ever get tired of hearing that excuse? I get
tired of having to use it! You'd think I would eventually learn not to
mess with the computer till I cause it to crash.) Guess what file was
in that group. ETrunker files! Luckily I had an older archive, which
you saw last month.
To sum it up, John gave his complete list to me. Not only does it

include KCMO, but it has Overland Park and Prairie Village, too.
Thanks for the list, John.

John added, "This is an EDACS 3-4-4 architecture -- 3 bits for the agency and 4 for the fleet and talk groups. This means it has 8 Agencies with 16 Fleets each, having 16 talk groups per fleet. OP and PV are identical, and the talk group number assignments are identical (this is a city-wide talk group assignment plan so mutual aid is easier to program.)"
"EDACS could have other architectures, and I have seen different schemes programmed into radios that were shipped to us for repair. The only limitation is there are 11 bits to divide up among agency, fleet and talk groups. The 3-4-4 seems popular, but I remember 2-4-5 systems that allowed 32 talk groups in a fleet, but only four agencies. Refresh your binary number counting scheme and you can see how the A-F-G 11- bit schemes work."

4. This morning, 05-23-99, I am hearing Overland Park dispatch on the
conventional mutual aid frequency of 866.5125. They were carrying on

with business as usual. Must have had a system crash on their Ericsson trunked system. Maybe they have someone like me over thereï¿½a guy who messes with the computer till it crashes!

---

5. We got a note from Dale, the KHP/KDOT guru, with a schedule for Salina dispatch to take over more shifts from dispatch centers elsewhere. Here it goes:

" This is central dispatch info as of 5-4-99. At present central dispatch has the Olathe, Chanute, Garden City, and Norton from 22:00 to 06:00 daily. (For what it is worth, I heard Salina take over Olathe at 2100 last week. Andy) They also have all shifts on the weekends for Norton and Chanute and do all dispatching for troop C."

"The following dates and actions will be taken by central dispatch."

6-5-99 weekend shifts at Troop A Olathe.
8-1-99 take over Troop D all shift 24/7
8-16-99 take 22:00 to 06:00 at Troop B Topeka.
9-4-99 take over troop H all shifts 24/7.
9-27-99 take over troop A Olathe all shifts 24/7.
10-18-99 take the 22:00 to 06:00 shift at troop F Wichita.
11-12-99 take troop E Garden City all shifts 24/7.
12-17-99 take troop B Topeka all shifts 24/7.
1-10-00 take troop F all shifts 24/7.

"Getting people hired at Salina will be the key to holding to these dates. The goal is to take over all operations by 1-1-00."

"On GPS (global positioning,) the little status buttons are not used for 10-44 (traffic stops.) This will be done by voice. The GPS will be used only for locating cars and showing where accidents are. GPS will move next to Troop H."

"If you are in western Ks. and want to monitor weather modification aircraft and radar ops try these:"

155.100/122.925 in sw ks
156.000/122.850 in nw ks.

"The new Garden City 800 system now has a phone patch on it."

"There is a new tower going up near Troy to fill a dead spot in that area for KDOT and KHP and a repeater will be added for EMS. I dont have any freq info for this though."

Great stuff, Dale. Keep it coming.

---

6. Bill wrote the following which should clarify some questions about multicasting an simulcasting. I'll quote his comments here:

"In Motorola words.....Simulcasting in trunking is multiple transmitter sites transmitting simulteanously. Linking two or more talkgroups is either patching - each group can hear each other - or multiselecting - the dispatcher transmitting on several talk groups at once. In multiselecting, each of the multiselected talk groups don't hear each other. When the PD is short of dispatchers they patch the West end with the Bonner Springs talkgroups. "

"By the way.....the KCK/BPU system is a 3 site simulcast system. The

receivers at each site vote the best audio and send it to the three transmitter sites at the same time. The audio amplitude and phasing is precisely matched and launched from each site at exactly the correct moment to reduce the distortion caused by multiple transmitters. Under some conditions the audio may sound distorted due to propagation or your location in relation to each site. This is called simulcast distortion and is the down side of simulcasting."
As usual, Bill has the good poop for us. Thanks, Bill.

---

7. This comes from Bob, who listens to about everythingï¿½including the Feds. Here is what he has discovered as of late:
"The EPA (Environmental Protection Agency) repeater on 165.4125 seems to be pretty active today. Normally it is either dead or I can't hear it out here in Hooterville."
"ATF (Alcohol, Tobacco and Firearms) on 165.2875 was active this a.m. with a couple of agents carping about how lousy their radio system was. The repeater was beset with almost constant squawks of intermod, just as it is every time it's keyed up. They obviously need a new system. Somehow the intermod even breaks through the 100.0 Hz. c.t.c.s.s."

---

8. I was listening to a local Motorola trunked system the middle of May, and heard an interview between what sounded like a radio announcer and a baseball player or official. At the end of the interview, the announcer ended with "You are listening to Shawnee Mission Baseball on 'SMT Radio.' " I've never heard of SMT Radio, have you? It must be some sort of link from an on-site announcer to the studio.
The trunked system ,designated 1FE7 by the Trunker program, uses the following frequencies, and has lots of business type users on it.
851.0125, 851.2625, 852.2625, 852.3125, 853.0125, 853.8375, 855.3625, 855.6375, 855.8125, 857.6875, 858.7625, 859.6875, 861.0625, 862.0625, 862.8125, 863.0625, 864.0625, 865.0625,
865.9375
The talkgroup used was decimal 17476/hex 4444.

---

9. Mike lives near Winfield KS, and has a question about KHP in Wichita. Perhaps some of you out that way can help him out. Here is what he had to say:
"I HAVE BEEN TRYING TO FIND A FREQUENCY TO NO AVAIL. I LIVE IN THE WINFIELD AREA. I CAN HEAR THE WICHITA STATE DISPATCHERS TALKING TO THE TROOPERS IN MY AREA BUT CANNOT HEAR THE TROOPERS TALKING TO WICHITA STATE DISPATCHERS UNLESS THE TR0OPERS ARE VERY CLOSE TO MY HOUSE. I HAVE BEEN TOLD THAT WHEN THE TROOPERS TALK IT IS ON LOW BAND FREQUENCY AND THEN IT GOES TO A TOWER WHICH CONVERTS IT TO HIGH BAND AND THAT SENDS IT TO WHICITA STATE. IN ANY EVENT I WANT TO HEAR TROOPERS CONVERSING WITH WICHITA DISPATCHERS... THANK -YOU."

---

10. Another question from a reader. David needs the frequencies and channel numbers for the Missouri Water Patrol. Apparently they have a "private" channel they call "KC." Anyone out there have the answer for that?

That's it this month. I am sure this column set a record! My fingers are worn to the bone!

As long as you're not driving a Corvette or other fiberglass vehicle, it should cause you no problems at all...it's no doubt grounded thru the magnet mount to the body anyway -- or, thru the coax to the radio's ground (though THAT's a tenuous connection).

I've never had a problem in 30+ years with mag mounts.

This is probably considered off topic, but I'll post my proverbial pennies publicly incase anyone else was wondering as well. The Seti@Home software is a little package that analyzes data received by radio telescopes (I think Seta@Home uses signals "just" from the massive radio telescope at Arecibo, Puerto Rico) in the hope of finding radio signals emitted by inhabitants of other planets.. Right now that is our best hope for finding intelligent life elsewhere.. the thinking being that since we emit (and have been for over 50 years) strong radio signals, other advanced civilizations are or have done the same.. The program itself is fairly small, and you can set it to run only when you're not currently using your computer.. It downloads about 350k of data and analyzes it looking for something that just would not belong in a certain range the radio spectrum. It takes me (on a p166) about 75 hours to analyze one data packet, so it's not something overly exciting to sit down and watch, but it is interesting to think of the possibilities.. Right now there are about 500,000 users analyzing data, and they have already done a total of 50988730 hours 02 minutes 19.4 seconds (5820.63 years) worth of CPU time.
The software and much more information than I can provide (and probably more accurate, too.) can be found at
http://setiathome.ssl.berkeley.edu/index.html
Give it a shot if you haven't already.. Who knows.. it could be your system that finds something.. :)

>purchased a "baby wipes heater". I am not joking.

In the first place, what in hades is a BABY WIPES HEATER????? Are you sure THAT is the name of the device? Anyway, any type of device that incorrectly generates RF energy, is subject to FCC scrutiny. I bet if you wrote a letter to the manufacturer of that thing, and told them your TV/RADIO reception is being destroyed by it, they might offer you a suggestion. (Although I'm not sure what it would be, lol). This might not help, but it couldn't hurt. Find out where your neighbor got that contraption, and try to get their address, or better yet, their Email address. If all else fails, you could take them to Civil Court with a nuisance suit! ... Good luck!

Can any one explain to me what it is ,and if it's worth to download it
Here is small description of the program.

The search for EXTRATERRESTRIAL INTELLIGENCE

SETI@home actually consists of two parts: an "application"
and a "screensaver". The application does all the work: it
downloads blocks of data from through the Internet, performs
the number crunching on that data (looking for orderly
patterns that might be artificial), returns the results, and
gets another block of data. The application is represented
by a green radio telescope icon in the System Tray (normally
at the lower right of your screen). You can open the appli-
cation window by double-clicking on this icon.

>this can happen???
>Thanks
>
>Robert

The probable reason for what you described, is that when you are using NFM, you receive the signals ON that frequency. However, when you switch to WFM, you are probably receiving an ADJACENT signal, which is STRONGER than the one you are tuned to. And because of FM's CAPTURE EFFECT, it GRABS your receiver...Joey

I think you missed the point, Bryan -

I agree completely with the other Stephen. Listening to police scanners for accident or emergency details is downright sick, in my estimation. I see no difference between your actions and those of the soulless video junkies that tape car accidents etc. Not only is it sick and of no use to those who need help, it's also an incredible violation of privacy for those hurt in the situation.

From what I read, the other poster's point was that rather than standing there and gawking, you either find a way to help, or get out of the way, and give survivors and victim's families some privacy to work through the shock and grief involved.

I have to let you off easy to some degree though - I'd say you learned well from the media sharks. They set quite an example.

As for the purpose of this newsgroup, we're here to learn and share, not chase ambulances.

You are not at risk with using a metal antenna such as a Watson or any other telescopic type. I have found, though, that when using a non-duckie or non-duckie antenna, clipping a 5ft hunk of wire onto the bnc or base portion of the antenna greatly improves the reception. Specifically on or below the insulator of the antenna shaft for frequencies below 100mhz and just above the insulator for frequencies above 100mhz. It is perhaps most dramatic when trying to monitor the 30-50mhz region and also the 118-136 aero band. Try this and I think you will be amazed. I have a setup of a 5ft wire and a large alligator clip that I take with me on the road. The next best thing to a roof antenna. Also for what it's worth, after trying nearly every BNC and SMA antenna out there, the Watson 881 SuperGainer antenna wins hands down. Several DB better gain than any Comet, Diamond, Premier or others I tried from 100-1000mhz across the board. The only thing is that from 30-50mhz the Radio Shack 20-006 center coiled telescopic antenna still rules. The trick is to collapse the entire area below the coil and extend all but the very top section above the coil for best results in that region. Good luck.

All sorts of "harmless" information can also be gathered which at the time
seems insignificant but can all be pieced together to give the whole
picture. People should be aware that such information as listed above
broadcast in the nieghborhood could make someone a target of crime.

That's why my cordless phone is a 900 MHZ digital spread-spectrum phone.
It is completely secure as far as scanner listeners are concerned.

Download the demo version of the ARDI mac emulator from

http://www.ardi.com/download.html

then get the Multimode demo version from

http://www.blackcatsystems.com/software/multimode.html

This took me 30 minutes altogether, the programs are running,
but Multimode does not recognize my Soundblaster Live under Windows.
Have not yet installed the DOS drivers,
because the SB Live DOS drivers are a pain in the ass.

Please would you all try this out and report the results here?
Does Multimode work on *your* PC?

good luck,

W.

Donna, a few points to add...

First: It is human nature for people to be attracted to accidents or disasters and to want to get information about them. How often have you been caught in a traffic jam because people are "rubbernecking" an auto accident on a road or parkway? And when you finally get up to the accident, you mean to tell me that you *never* look at the accident scene?

As long as a person with a scanner does not use the information he receives from it to obtain personal gain, it is perfectly legal for him to use it. And the names of victims are *never* stated over emergency radios, so there is no privacy problem present at the accident scene.

I am a paid EMT in the New York City EMS system, and a volunteer firefighter on Long Island for seven years. While it is quite normal for people to be attratcted to accident scenes, *not* everyone can be an emergency responder. Not everyone is able to handle the stress of the incident, or even desires to have the skills to perform in such incidents.

Rob

Donna,
I glad we live in the USA where we can all have our own opinions and have the right to disagree with each other. And I am going to disagree with you.

I have had a scanner operating in my home for nearly 30 years non-stop. Am I a morbid person seeking thrills from others suffering? NO! Am I downright sick (your words) to listen in on police and fire radio traffic. NO I'm not. I have the right to monitor the professional people our tax dollars pay. I have the right to get my information on current events from a source other than a newspaper or TV news program that will tell me what they think I should know. In the area I live in a fatal car accident often makes the paper in about 3 or 4 days. The information is seldom accurate and never complete. The TV news programs around here are more interested in crap programming like "A New Tree Was Planted At The Senior Citizens Building" film at 11. If you want to know what that thick black cloud of smoke was to the east don't look in the paper or watch TV, get a scanner.

Frankly, your remark about listening to scanner traffic being "sick and of no use to those who need help" makes little sense to me. I'm at home after working 10 hours at my job and I hear about an accident across town. What am I supposed to do? Run out and see if I can help? You have made a very crucial error in assuming that I'm running to the scene and getting in the way. I'm not standing there gawking!!!!! I'm listening from my home! What part of this don't you understand. Find a way to help??????? Incredible violation of privacy ? I'll remember that the next time I happen across an accident scene and there are injured people who could benefit from my 10 years as a fireman with EMS training. I won't stop and help, as that might violate their privacy.

As for the purpose of this NG, I believe that the majority of us in this group are
here to learn and share information on how to do what you find so objectionable,
BETTER.

I can't stop an airplane from crashing in the field behind my house, I don't want
an airplane to crash behind my house, but, if an airplane crashes behind my house,
I'm going to hear how it was handled by the professionals I pay to handle it.

Your remark about "you learned well from the media sharks" is about as far off the
mark as you could get. I distrust the media as much as anyone. The media does
not think for me. That is why I do not rely on the media for my information. I can't
tell you how far off the reporting is from what actually happened. (if it's covered at
all) Who thinks for you??? You may want to consider a replacement! Why do I
get the feeling you use a bible for a mouse pad?

Donna, you may want to subscribe to a news group like
bleeding.heart.liberal.crybabies.news

Goto industry canada's website(www.ic.gc.ca) and search for freq a
list for ontairo. I can't rember where I found the copy that I have
but it includes all stations freq, airports, private, cell, just about
all licenced stationed(it dosen't include RCMP, Miltary and I'm not
sure about provincal police)
At the airshow they should be using the airports freq's.

Actually, the "competency" line is just a smoke screen.

In actuality, CW is a high-tech form of HAZING - a painful rite of
initiation. The reason they don't do away with it is because current
"Ham clique" members figure "hey, *I* had to do it, so I'm gonna make
the newbies go though it, too!" Accroding to the TV news show I saw,
this is the main reason why hazing still exists in the military, even
though officially it is aginst regulations.

For aviation-related scanning in Canada, I highly recommend
http://www.interlog.com/~rollers/ Of course, of all the web sites
mentioned, none will have air show-specific frequencies. Common practice is
to "run" the air show over existing ATC frequencies [the airport's tower
will almost always retain jurisdiction over any flying at the field,
including a show] and then to add one or two discretionary frequencies for
air-to-ground comms (ie to pipe over the PA system or to co-ordinate
performers) -- the latter will not be in any official frequency guide but
may be repeated from year to year and therefore show up on a frequency
guide. And on top of that, performers (teams, especially, due to the need
to communicate amongst themselves) will pick one or more frequencies to use
during their shows. These are easier to find. For Hamilton, you'll want the
Thunderbirds and Snowbirds. Many online lists have their common frequencies
listed. Snowbirds were on 272.100 at almost all shows last year and at
Ottawa this year. The Thunderbirds use several.

Maybe they should unblock our scanners and just make it illegal to listen
to wireless phone conversations.
I for one feel violated when I get a shiny news scanner and some commision
has already made the manufacturer black out big blocks of frequencies because
the cell phone people complained that they couldn't deal their drugs without us listening
to them and turning them in.

3795. E-Trax Review

Newsgroup: rec.radio.scanner
Date: 1999-06-03 00:00:00 UTC
From: n9jig@theramp.net
Message-ID: <n9jig-0306990026080001@k56-ip-82.theramp.net>
Source record: 116565

E-Trax, by Joseph Cardani, is a DOS based utility for the OptoCom receiver that allows tracking of the popular EDACS trunking systems often used by Public Safety and business operations in the US. While not as numerous as the Motorola trunking systems, EDACS is a major player in the field. In the Chicago area the Illinois State Police and Will County operate EDACS systems, and Lake County will be installing one soon.

E-Trax currently operates only OptoCom receivers, but support for other radios such as the OS456 and Icoms are in the works. E-Trax requires regular DOS, not a DOS Window within Windows. It suggests a 486 or better. No modification to your radio is required. The Bit Banger feature now included on OptoComs is not required, although E-Trax should work with it with no problem.

I have been running E-Trax on a variety of computers, including:

IBM Pentium II, 233 MHz desktop (32 MB RAM)
Compaq Pentium 120 MHz laptop (32 MB RAM)
Compaq 486 DX4/100 tower (8MB RAM)
Winbook 486/100 laptop. (8MB RAM)

It ran well on each of these with no problems.

E-Trax, at first glance, seems complicated. Once you read the instructions and view the files, it becomes clearer and after using it for a couple days it all becomes clear, and I realized that it really is a simple and easy to use program. The instructions are easy to read and complete. An MS Word version is available on the E-Trax web page (Address listed below).

The program has several parts. The first is the actual program itself. This is less than 200K in size.

The second part is the Config file. This tells the computer what kind of radio and what com port is used. Other information is present here, and the manual tells you exactly how to edit this for proper operation.

The third part is the system file. This is the file that you edit to tell the radio the frequencies and other information on the system you are going to listen to. Several sample systems are available of you don't have the information needed for the systems you wish to listen to. Info on many EDACS systems are available on the E-Trax web page.

One of the system files included is the "Initial" file. This is used to figure out the correct Channel Order used by your system. This is important to have correct, since an incorrect order will provide false groups ID's. The manual tells you how to edit this with the frequencies

used by your system. The freqs can be found in Police Call, or on various web sites. You then run the program with the Initial file, and follow the instructions to decipher the correct channel order. A second scanner is used to verify the correct channel order. Most, but not all, EDACS systems use the freqs in ascending or descending order.

Once you have the correct channel order you can start listening to the system. The program shows you Group ID's (GID's) as they become active. By careful monitoring you can figure out what is what. Many times a unit will identify the group he is using ("22 to 44 on Car West"). If you are lucky enough t monitor a system during it's installation and testing phase the techs will often test each group and identify it for you. Once you figure out the use you can add a title to the Group, called a Tag.

A recent excursion to the Joliet area this week allowed me to identify 6 groups in a few minutes. On a busier day I could have done a lot more, but since this was Sunday, the only active groups were the Sheriff's Department's.

As you identify group ID's, write down the use, and you can edit the system file and add up to 1000 GID tags. This should keep you busy for a while. Once you identify the various groups you can add them to a scan list by editing the same file. You can keep several versions of the same system file with different scan lists to allow for different scanning strategies. Just be sure to name them differently. Being DOS, be sure to keep the names to 8 characters or less, and do not use a file extension (no ".txt" for example)

The program delivers a lot of information on the EDACS system you are listening to. The active frequency , talk group, the name of the group, type of group or conversation, what the control channel is, and status of the program. Talk groups that have not yet been identified are shown as such, so you will know to listen carefully and figure out the use.

The program allows you to monitor a system in several ways. One is to "Search" this is similar to searching on a regular scanner in that it will display any active group or call, and display the ID and Tag (if known). You can chose to track a single group or call, scan a pre-selected list with or without a scan delay, follow groups only, again with or without delay, or even individual calls only.

After a couple weeks of operation I found the program to be a reliable and efficient way to monitor an EDACS system. In fact it is the only way to track an EDACS system with a single radio, at least until the Uniden BC245 is available. While monitoring the Illinois State Police system I was able to track individual groups when an interesting call came out, and searched out new groups. I already had a majority of the most active groups ID's, and as new ones were found I tracked them until I figured out what it was used for. When I had several new groups identified I stopped the program and added them to the list of Group tags.

The only problems I had with the program were relatively minor, and are probably more preferences than complaints. I would prefer for the program to be able to run in a DOS Window so that other Windows programs could run at the same time. I would also like to see the "F-Key" functions on the screen to make it easier to select options. I found that the default yellow and blue on black screen was hard to see in bright sunlight in my van, an inverted screen color would make it easier to read.

There is no way to edit the system file with the program running, nor are there some advanced features such as hit counts or priority. Since the program was intended to be as simple as possible and use as little computer resources as possible, I do not consider these major deficiencies. Some of these features may be included in future versions. Also, some of these ideas may not be practical for a program of this nature.

I liked the overall layout of the display and the operation of the program. It was easy to edit the group tags and to switch between modes.

Other programs are believed to be available in the near future that will track EDACS systems. New versions of Scan-Star are rumored to allow simultaneous tracking of both EDACS and Motorola systems. Since E-Trax is limited to EDACS systems only it can be optimized for them and disregard any bloat needed for additional protocols.

E-Trax is a valuable resource for serious scanner users. If you have an EDACS system near you and an OptoCom, then E-Trax is worth the price. When this program supports some of the other radios such as the OS456 and PCR1000 then it will become even more desirable.

More information, including screen shots, is available on the E-Trax Information Page at:

http://www.erols.com/jcardani/e-trax.htm

E-Trax is available for about $89.95 from:

Rather than point out the "dangers" of scanners, they should have presented it
as an example of the dangers of using unencrypted cordless phones for "private"
communications.

That's how the media operates. You see even worse when they talk about the
Internet.

I have a Pro-2042 I'd like to sell. It's about 6 months old and in good condition.

Some specs:

1000 channels
tunes from 25 MHz to 1.3 GHz
Very "flexible" radio, with a lot of great features and extras. If you're familiar with this scanner,
you'll know that, if not, and you're interested just fire me off an email.

I've used it for the "typical" stuff, plus I've successfully received MIR packet and SSTV [Slow Scan TV] downlinks, AO-27 Amateur Radio satellite downlinks, etc. It also tends to receive AirTouch analog phones - it hasn't been modified though.

Foreign visitors to England should be made aware that the authorities responsible for directional signs on our highways are a bunch of dickheads. I usually write down my route whilst consulting a road map and have the list on the dashboard, so I can keep a check that I am following the correct road numbers.
So yesterday we drove from Emsworth in Hampshire, following a route which would link us to the A34 and onto Oxford. Now at Oxford I wanted to leave the A34 and get onto the A423 ring road to link up with the A40(E). I was pretty sure which exit to take but confusion reigned as the sign off the exit ramp said it would lead onto the A4144. There was no mention of the A423 at all on the sign, though the A423 is one of the exits off the roundabout at the top of the ramp! Nearly to the top of the ramp some joker had painted on the road surface a directional turn for the A423. So why is there no mention of the A423 on the actual road sign preceeding the exit ramp?

Sorry Pappy, but yes, you should be restricted from using the main part of the HF range, because current rules, (including International agreement), require it. You already have a PIECE of 10 meters, more than you ever had before. And this was GIVEN to you! I am a General Class operator, and I took my 13 WPM code test in the presence of an FCC Engineer, and passed it. You have it EASY compared to to that! Be honest...How much REAL effort have you actually put into learning the Morse Code? I venture to say that the main reason you have not upgraded your license in all these years, is because you use 2 meters, and have probably never shot ONE dit or dah on the NOVICE segments you are allowed to use. Am I right? If so, why the complaining? I started out in 1975 as a Technician. (5 wpm code then). In 1979 I upgraded to General, because after 4900 cw contacts on the Novice segments, I KNEW MORSE CODE! Oh yes, I'm in my 40s. It does not take a great deal of intelligence to learn CW, just the WILL to do it....Joey P.S. I will delete without reading, any Email sent to me, as I am sure it would only be flames...

Cordless phone users mostly talk about buying groceries, coming over to visit their parents, what they are going to do for the holiday's, make drug deal, break up and argue with
their boyfriend/girlfriend, gossip about other neighboards etc.
A bunch of boring stuff which makes tuning the dial into that range not worth the effort.

I just went through this with my 3000XLT. I bought my batteries from
Digikey. http://www.digikey.com/A.DKS $2.78 X 5 = $13.90 + shipping.
They are rated at 1.2 volts 600 mah.

Cheers,
Tom

Maybe not as this is a very small signal. If you hook an audio
amplifier
to that tap you should hear audio similar to the unsquelched radio
speaker. It may sound somewhat distorted as this audio has not
processed. That is the reason of going to the tap in the first
place.

LASO Dispatches Carson "16--" units on F9 484.1625 when you hear "beeping" on the frequency it means a car is transmitting...they don't usually have the repeater mode functioning except during pursuits and some emergency calls.

Carson units also use "L-Tac 5" for car-to-car, on 483.4625 or "A-Tac 4" on 487.1125

That's right. Don't get the idea that I support morse as a
qualification for HF access, but that treaty obligation
remains until 2003, which is the earliest date at which
it can be discussed.

In the meantime a compromise speed of 5WPM has been reached
which should ease the pain somewhat until 2003.

As you say 'a knowledge of morse' - the ability to write
down the dot and dashes for A-Z and 0-9 would probably
satisfy that requirement!

That is what is being done here. The speed has been set
at 5 WPM, and details of what should be included in a
technical exam to replace morse is under discussion.

The FCC will probably do much the same thing soon.

The PRO-25 is a dual conversion unit, right?

If so, then an amp is probably a bad idea. Your best bet is mount the
antenna like this: | not like this: ----0----
| |
0--- |
| |
| |
|
and use a rotator to angle it towards your target.

Say Joey, just what is it about CBer's that bothers you so much? I'm not talking about the FEW jerko's that run around on their 1000 watt amplifiers pissing off truckers and inviting them to the nearest Circle K to get the "beating of their life", as I so often hear on my CB.

Do you think that EVERYONE who uses a CB is stupid? I beg to differ. I use mine when driving between AZ and California regularly to keep up on road conditions and swap jokes with the truck drivers. I'm a computer programmer, fluent in about a dozen or so programming languages, so I don't consider myself to be stupid. Am I missing something?

Granted, there are a few on CB who like to curse and insult people just for fun, as there are people who like to pick fights on usenet regularly. But they make up only about 10% of all CBer's by my estimation, the rest of us are decent folks who earn a decent living and KNOW how to communicate with others without using profanity or excessive power.

Should I desire to go out and get an amateur license, I doubt that it would be all that difficult for me to learn what I need to know. However, right at this moment, I see no need to go learn it - I have enough to remember already.

I do know that if insulting otherwise intelligent people just because they have chosen NOT to pursue their Tech license because they can't learn code is part of ham radio, then you can count me out. Alot of people say code will kill ham, alot of people say no code will kill ham. You want to know what will really kill ham? Hams that act like this, bickering and squabbling and carrying on like a bunch of juvenile boys pumped up on testosterone and ego. Hams who think that their license is membership to some elitist organization that shuns outsiders. That is what will kill ham. Be a little more open minded. If a CBer gets his no code license, congratulate him, don't put him down. Maybe he'll learn by your example how a ham is supposed to act and take the time to learn CW and radio theory, instead of hogging the airwaves (hee hee, and dare I say it? Usenet bandwidth?) with childish insults and horsecrap.

That's my story and I'm sticking to it. Flames will not be replied to, just laughed at and ignored.

>
It will certainly cut down on intermod and image reception. Trouble with most CTCSS capable scanners on the market is that they don't search for the CTCSS tones in use - you have to know what they are already. That's one of the many things I like about the BC895xlt.. the tone search function is great. I use it whenever I enter new frequencies, even if the tone is listed, as they are usually listed incorrectly. I'd make sure the Relm has CTCSS search before buying one.

>Satellite that covers North America - Thanks
>
from
http://www.iridium.com/english/tech/i_tech.html

The Iridium system will employ a combination of Frequency Division Multiple Access and Time Division Multiple Access (FDMA/TDMA) signals multiplexing to make the most efficient use of limited spectrum. The L-Band (1616-1626.5 MHz), serves as the link between the satellite and Iridium subscriber equipment. The Ka-Band (19.4-19.6 GHz for downlinks; 29.1-29.3 GHz for uplinks) serves as the link between the satellite and the gateways and earth terminals.

Based on this there won't be any "channels"...it'll be constantly changing.....

Phil... In the first place, I'm not going to flame you. CB radio, and it's users don't BOTHER me, because for one thing, I don't ever listen to it anymore. Yes, at one time, I TRIED to use this SERVICE to actually carry on personal communications with members of my family. I never involved myself with the nonsense that plagued each and every channel. After about 4 years, and many cursings, filthy talk to my family members, threats, etc., I threw all the equipment in the waste can. I really TRIED to use it, but I could not escape the GARBAGE HEADS that occupy this frequency range, (and plenty above and below, too)...I'm sure you are right that there are many GOOD, and SMART people on CB. I guess I was just unfortunate to try to use it in an area were the BAD ones greatly outnumber the good ones. Also, I don't expect, or want for that matter, EVERYONE to try for a Ham license. This would not be in the best interest of Ham radio. But I do not agree with you that their are only a FEW crummy CBer's...You very well know that it is an undisciplined, raucous bunch of people that seem to take pleasure in causing confusion, and animosity to everyone else. As I have said before, albeit maybe slightly acidic in tone, this is a very good example of what happens when everything is just GIVEN AWAY! The FCC could not afford to monitor this uncontrolable mob, so it just threw it to the wind. And look what happened to it after that. It just got 10 times worse, making it practically unusuable except for those engaged in all the havoc. This is why I am so against GIVING AWAY Ham tickets, with hardly any examination. If someone has to put forth some effort to get something, he/she sees it's value, and has more respect for the accomplishment. Morse Code is perceived by many to be a stumbling block for otherwise qualified individuals. And to SOME extent, it may have that effect. But at the same time, it shows how SERIOUS the person is about what he is attempting to do, and how that person will USE the privileges he is trying to EARN. It is the same old story. IF something is given away, it loses it's value. There...No Flames, Just FACT!...Joey

Morse code is just an abstract mode that can only be seen and heard. It
cannot help you

build a HF rig, act courteous on the air, or shows how serious a person is
in getting into a

particular hobby such as this. Indeed, the code test does not test whether
a person is a bad

apple or not.

Source record: 116317

Both in excellent condition. Pro-2005 has the cellular, scan speed increase, and beep delete mods performed. Backlight is fully bright. R71A shortwave receiver has the PBT function and works perfectly. Later production model. Not a scratch on it! Very quiet with low noise figure. With box and manual. Both work perfectly in all functions.

Price is $750 plus shipping for both.

yes national electronics is taking pre-orders for $209.95 + $9.00 s+h.

you can contact them at:

sales@national-electronics.com

I bought my 235 from them last christmas and I was impressed with the service and quick delivery. I am moving to a non-trunked area and will be selling my 235 with all of the original stuff, box, vehicle cord and glove leather case for $160.00 plus shipping from VA. if anyone is interested. Thanks

Why would "normal" people even _want_ to be hams?

Now stop your infernal whining and go get your ticket if you really want
one, rather than whining about your betters. It's probably easier to
get a ham license these days than it is to get a driver's license in
many states.

I live in the same town as Dad#1, and I've heard the packet bursts
he describes. It's definitely not Bell 202. He sent me his WAV file and
as far as I can tell, it's QPSK with a 2400 Hz carrier. I'm not 100% sure
of this, but when you zoom in on the waveform it certainly looks like it,
and it sounds like PSK, too. There might be an AM component as well,
making it more like trellis-coded modulation. I'm going to digitize the
output of my scanner's discriminator and sample it at a higher sampling
rate and see if that sheds any light on the situation.

Well since you were the one to push the wrong button let me quote directly from FCC Regs part 90.425 Station Identification so we can clear this situation up once and for all:

90.425 Station Identification.

Stations licensed under this part shall transmit identification in accordance with the following provisions:

(a) IDENTIFICATION PROCEDURE. Except as provided for in paragraph (d) of this section, each station or system shall be identified by the transmission of the assigned call sign during each transmission or exchange of transmissions, or once every 15 minutes (30 minutes in the Public Safety and Special Emergency Radio Services) during periods of continuous operation. The call sign shall be transmitted by voice in the English language or by International Morse Code in accordance with paragraph (b) of this section.

I do believe we do operate in the Public Safety and/or Special Emergency Radio Service.

It is also required by FCC Regs that each station have their own copy of FCC Part 90 Regs. So where is yours? Get it and read it sometime.

Should be comparable. Perhaps a slight edge to the Uniden due to
the larger and more efficient antenna.

I think the bigger concern might be that on the Uniden you can
opt for a different antenna. No such option on the Electra.

Actually, it does "scan" radio freqs. It just doesn't do it real
time.
You can get it at http://setiathome.ssl.berkley.edu

Ummm, if I remember, all they really had to do is pick up a mic.
I think the morse thing was just a plug from some HAM coding freak.

OK, I'll transmit the letter "E", and receive that by ear.

Satisfied? The requirements are.

And if it really was by ear, how would any deaf operators every qualify
for the treaty?

No, not replace it, just don't RELY on it. You're right, CW is just another form
of communication. Why should that one form carry more weight than all others? Offer a technical test and a CHOICE of practical test, one of which
being CW.

Well, I have an old Pro-37 rubber duck that had ALL of its rubber coating chewed off by the previous owner of the scanner (nervous habit, I guess). I had to resolder the connection at the base of the antenna several times because it would break due to excessive flex in the antenna. Obviously, the rubber coating stiffens the antenna a lot. I have never broken a ducky that was wearing its rubber :-).

I doubt that you have anything to worry about when it comes to front-end damage from using a metal antenna. Radio Shack sells a metal telescoping antenna that works great on low-band. I live in Sacramento, CA and I once heard a Stockton CHP mobile on 42.720 with this antenna on a Pro-62. I also noticed better reception with that old Pro-37 antenna when I compared it to an identical, undamaged rubber duck. Strange.

Yep,
It sure seems like they want scanners to go the way of firearms in this nation. A three day wait on scanners and a NICS check. Some true dyed in the wool ignoramous of a "public official " will probably endorse such legislation and the truly ignorant public will buy into it lock stock and barrel. Ever noticed that television is nothing but a propaganda machine for a certain political agenda ? What exactly gives the media the right to portray themselves as knowledgeable on things they obviously know nothing about ? It is truly unfortunate that public stupidity has taken the place of personal responsibility in our society.

Off of my soapbox now thanks for reading,
Tom

All of us in the radio hobby weather it be a scanner, Ham Radio, CB Radio, etc.should start using our radios to help police,
I know I have read a few posts from police officers and or firemen that enjoy scanning. If you listen while in your car copy down that plte number the local police might be looking for and call if you see it. then ask the officers to post it in the paper
that a scanner was used for good instead of just listening to cellular or cordless phones. Just an Idea Post replies to the group.

BAYCITVIDGRP (myway@ix.netcom.com) wrote:

: so the PRESS people are sick people who listen
: to scanners for all sorts of stuff going
: down daily.

Oh no! When I was commuting, I used a scanner to listen to the
PRESS! What does that make me? :-)

Actually, I found that scanning the frequencies the traffic reporters
used gives you a *much* better take on the commute situation. It's
amazing what the on-air reports leave out.

For student pilots, using a scanner on ATC can give invaluable
insight into radio procedure.

As far as police & fire, well it is an accepted subset of the hobby,
but not one to my taste. If I hear a lot of activity in my neighborhood,
I might tune in briefly to make sure that there isn't a toxic cloud
blowing my way, but otherwise I don't bother.

I've been trained in disaster relief by the city and my company which
is why I stay out of the way and let the pros do the work. If they
need me, I'll know it.

If you want to know what's *really* sick, you should pick up a scanner
magazine someday. They actually discuss the best way to monitor
fast food outlets! Also not to my 'taste' heh.

Cheers,

Rick

>Would like to test first before asking the ARDI people.

I think it is the Executor emulator which prevents Multimode
from running: looks as if it supports only mono audio, not stereo.
Multimode requires a stereo card. Maybe a receive-only version
would do it.
Think have to wait for the next version of Executor.

Other MAC emulators require legit ownership of Mac ROM and
Mac Operating System, only Mac owners have it.
If you own a Mac, you may use those emulators on a PC.
To look for Mac emulators, see
http:/www.sysopt.com/reviews/macemu/index2.html

There's probably something wrong with the unit. Mine generates no noise whatsoever - I generally run 2 PC's and 4 scanners at once, no interference on any of them.

She probably doesn't have one. Nor do I. I came across this thread
in rec.travel.air, where I suspect MOST people don't have scanners.

I'm not disagreeing with you regarding your use of scanners; I really
don't care how you use them.

My point is that a lot of you have been assuming that she's reading
the newsgroup rec.radio.scanner, and are naturally confused when she
says things that are "anti-scanner". I think she, like myself, is
reading rec.travel.air, which is an entirely different audience.

>Please , can you give me the GSM and DCS phone mobile frequencies in Europe.

GSM900: Exact Frequencies can vary between different countries,
depending on earlier analog systems in use. The limits are soft, so
when the use of analog decreases, GSM gets more bandwith.

In Sweden:
890.0000 - 899.0000 NMT /GSM Telia
899.1000 - 903.9000 GSM Telia
904.1000 - 908.9000 GSM Comviq
909.1000 - 913.9000 GSM Europolitan

935.0000 - 960.0000 NMT/GSM Base ->Mobile
944.1000 - 948.9000 GSM Telia
949.1000 - 953.9000 GSM Comviq

DCS/(GSM1800) is on 1800MHz But I don't know the exact frequencies.

/Marcus

The point is that there is no "THE CODE", the algorithm is known, but
the key is changed individually for every subscriber at every call
setup. So it will probably be quite a while, yes. The datastream in
itself is also quite complex, time division with frequency hopping to
add. Probably have to take a phone and disassemble and change the sw,
rather than using a conventional radio.

I agree, it is very worthwhile. I have the program working at home and at work, and it doesn't get in the way at all, and it's nice to have the computer doing something productive when I'm not using it.

How absolutely ironic... the ABC station here in Phoenix uses a whole fleet of scanners, including 5 BC895xlt's. They know damn well why people want to listen....

Maybe it's so they can produce their own version of the "news" unhindered by those of us who know better.

I had one of these....

Dual conversion, 100 channels I believe.

Stopped working one week after I bought it. Sent it in for service, then 1 year later it crapped again. Tossed in the junkpile, then later sold at garage sale for $5, as is.

It was OK, but no BC235, to be sure. I hunted around for mods back then and didn't find any.

Probably not what you wanted to hear, but at least now you know.

Well, I don't know about that... My 895 sounds a bit distorted if I play the discriminator audio thru the PC speakers, but the source lets the PC decode MDT and Flex like a champ! I have a 2026 that I also have tapped, and it is nowhere near as good as the 895.

Yeah, alot of trash out there on the HAM bands.
HAM used to be honorable, now it's just a bunch of freq's dominated by a bunch
of elitist trailer trash assholes who forget that the FCC controls them and the freq's they are on.
From the old HAM's perspective, they invented and own all the freq's between DC and light
and damnit, they will make sure that all those freq's are completely empty before considering
letting normal, modern people on.

Here in Phoenix, it is broadcast via voice by the dispatcher usually
whenever clearing an incident from one of the Chase channels:

"Channel 3 will be clear of the traffic at 1234 AnyStreet back to channel 5
at 14:39, KOA789"

But you're right, it's not EVERY transmission.

Exactly - no scanner here. Actually, I'm an airline employee and trained volunteer. In the case of an air accident, I am ready to go within 2 hours to assist families and survivors. Part of the training discusses how media, lawyers etc. go too far with invading the privacy of the families, as well as giving premature conclusions on the issues. And no - I don't read the scanner newsgroup. In fact, I didn't even notice that it was a cross post. Now I understand the avalanche of flame mail and nasty responses.

Thank you Ed! :)

This is exactly the point. A scanner listener is far better informed than those who rely upon the media to find out what is going on. In my opinion the mass media in general are the sickos who get off on disaster and human suffering. During the L.A. riots, they even took a more pro-active role in the mayhem by broadcasting every bit of it live, turning common thugs and criminals into freakin' celebrities. That is truly disgusting in my opinion. I can just imagine what'll happen when the "Big One" hits L.A. Two weeks solid of so-called "scientific analysis" and rehashing the "Oh my God, this is so great - er um, I mean terrible" shock videos for three weeks straight.

Most of us listen to the scanner not so much to be at the scene of an incident (unless that is our job, as an EMT, freelance video journalist, etc.) but to know what places to avoid. Mine is invaluable in the time saved by avoiding accidents and the subsequent rubber-neckers during my daily commute.

>And no - I don't read the

As for the flame mail and nasty responses, most of it probably came from the usual bunch of retards that seem to frequent this group only to pick a fight. You can pay it no mind, most likely - just consider the source, as I often do.

While I sympathise with you problem - You are coming from the position of the UK having, in general, excellent road signs. Try to compare it to other countries some of which only number Motorways, not B and C roads, some only use local names and some don't bother at all. I spent a lot of time in NSW Australia and believe me the UK system is a dream. Some of their Motorways change number three or four times without any warning. If it were not for the fact that there are not so many roads one could get horribly lost - and out there if you miss a turning it may be 100Km before a) you realise it and b) you can get round your mistake!!

This has nothing to do with this NG. If you want to use your computer to chrunch numbers for someone else for nothing, go for it.

It depends on what is written on the CD or accompanying documents that indicate a copyright. Normally any and all government documents or data are public domain since tax money was used to purchase it and title 17 USC decrees it so, however if there was a contractor involved as the middle man then there could be a copyright involved. Just like Percom does on their disk, you can't legally copy it because of the copyright and their extraction program and software is copyrighted but the actual frequency data is not copyrightable since it's source is the federal government FCC database. Check out title 17 USC and you'll find that the government documents (works) are not copyrightable:
TITLE 17 - COPYRIGHTS
CHAPTER 1 - SUBJECT MATTER AND SCOPE OF COPYRIGHT

Sec. 105. Subject matter of copyright: United States Government works

Copyright protection under this title is not available for any work of the United States Government, but the United States Government is not precluded from receiving and holding copyrights transferred to it by assignment, bequest, or otherwise.

so since the FCC is the one that compiles the frequency database, the information contained in that database is not copyrightable by the government and anyone buying that database also cannot copyright it since it is not their original work to copyright, although the software they create to search, display and print it CAN be copyrightable........enjoy.....

I've never had a known static problem and I've worked the world with
various mag mounts. The key to mobile installations is grounding. If
you achieve a "good" ground then all is well. If not, then you will
have problems with transmitting (and watch that computer in the car!!).
If you are just receiving then no problem and the car roof makes a
great groundplane.

Yep, cellular is boring and will hold your attention for about 10
minutes. There are 4 main types of conversations. The first is kids
asking parents for money, then wives/husbands lieing to each other. I
heard a few drug exchanges once but that was years ago and haven't been
back since. It's not going to matter much longer anyway-you are
already missing the digital half of cellular and when they go voice
encryption then it all goes..... www.leeselect.com new radio retailer

Try 450.650. Richard Thomas, who flies the plane and reports, works
for Metro Networks, so there may be some other frequencies he uses.
The 450.650 is the WSM air frequency.

Simply record the tones and play them back down the phone at the
appropriate prompt - relatively easy - of course you need to know
which neighbor you have the password for... the same method can also
be used to access phone banking services - I have a keyring that has
the appropriate sequence on it to call MY voicemail, enter the login
password and playback any waiting messages, rather than entering it
all in on the phone one digit at a time... in much the same way my
mobile phone will dial either home or it's voicemail, wait for a
second or two, and then enter the sequence to access the mail,
automatically...

The contact manager software I use can send tones too - just hit a
button while holding the handset next to the speaker, and it dials out
for me... just makes life a little easier...

I just thought of something that might get the coders to advance into the "modern" age.
We can give them some Commadore VIC20's and a 300baud modem to transmit over radio.
It will be just as effective as morse code but more modern and more useful. ;)

Cool! I have knowlege of CW!
I KNOW that CW is worthless, outdated and that a bunch of old arrogant farts still like to do it as picking up a mic is too easy and they like pain.

Some details:
Install the emulator first, all automatic.
Then run it and make a new folder.. file/newfolder name it eg.
Multimode.
then grab the downloaded multimode.hqx file and copy it
into that new folder
then start 'Stuffit' in the emulator which will expand the hqx file.
Thats all, folks. The program runs!

I think, the emulator needs the DOS soundcard drivers,
to check if they work use any DOS game, eg Commander Keen,
or other jump-and-run game.
With my SB Live there is no sound input to Multimode,
but I do not have the DOS drivers installed. Will try my old SB16.
ARDI says, the sound drivers in the emulator are rather basic.

You might want to have your neighbor check for a safety
recall on his unit.

In the "product recalls" section of the latest Consumer
Digest Reports yearly compendium, there is a recall listed
for one brand of these baby wipes heaters, evidently the
gadget overheats, melts its controller, and either catches
fire or becomes a electric shock hazard.

If you are interested, I can go to the library Monday and get
the specific brand and model info for you.

>>

Still trying....

Commander Keen works now, that means, DOS drivers are ok.
Installed Executor Win95/98 version and Executor Win31/DOS version,
both versions do not record sound with Multimode on my system.
Sound output from Multimode is ok, can hear the keyclick
when clicking the buttons, speaker sysbeep also works.
Multimode gives an error message:

"Unfortunately your Macintosh is lacking some essential
hardware or software and can't run Multimode properly
Does not support stereo
Transmit mode disabled"
When clicking the Apple menu, only the startup splash opens,
saying 'not registered'. No icon/info about system components.
Clicking on that window terminates the program with an error.

To sort out whether it's Executor or Multimode,
I would need a small MAC program for sound recording,
can you recommend one, with URL to download?
Or mail it to me.
Would like to test first before asking the ARDI people.

W.

>particular hobby such as this.

Who said anything about BUILDING RIGS? That takes technical expertise that has NOTHING to do with MORSE CODE, OR VOICE..
But Morse Code most certainly DOES show if a person is SERIOUS about getting into the Amateur Radio hobby, because if he/she were not, would they put themselves through that kind of TORMENT? Lol...See? But I will agree with the last part of your statement, that it does not show if the person will be a good operator. But, if someone puts THAT much effort into it, (learning Morse), they are not as likely to do anything to cause them to lose what they worked so hard to get! Right? Does that make sense to you?....Joey

Yeah there is alot of that yellow stretchy glue. Carefully & slowly pry the case open until you can slip something to hold it open like a small screwdriver. Then use a knife carefully (!) to slowly slice through the stretched glue. As you cut more & more of the glue, the case will open up more.

I used some batt's from DigiKey p/n P235T, 2/3 AF, 600mah. Cheaper than shelling out to Uniden & fun too! Also converted another case to use AAA cells. You have probably seen that in the Emails here on the newsgroup.

But with the memory drain problem, I don't use the BC2500 much as you can't trust the battery pack if it has been sitting around for awhile.

Do you read the details of accidents or emergencies in the newspaper, or watch them on TV? If so, what's the difference? If not, how does this make the scanner listener any different than the millions who do read or watch the news, other than the time factor?

Supposedly MDT is only restricted when it is encrypted. Just because the signal is "digital" doesn't mean it is encrypted. Obviously one shouldn't repeat/post or whatever what they "hear".

I want to know why that Bozo back east posted 92 pages of his local PD MDT traffic. Like graffitti, the point or meaning is lost on everyone else not involved!

Well since you were the one to push the wrong button let me quote directly from FCC Regs part 90.425 Station Identification so we can clear this situation up once and for all:

90.425 Station Identification.

Stations licensed under this part shall transmit identification in accordance with the following provisions:

(a) IDENTIFICATION PROCEDURE. Except as provided for in paragraph (d) of this section, each station or system shall be identified by the transmission of the assigned call sign during each transmission or exchange of transmissions, or once every 15 minutes (30 minutes in the Public Safety and Special Emergency Radio Services) during periods of continuous operation. The call sign shall be transmitted by voice in the English language or by International Morse Code in accordance with paragraph (b) of this section.

I do believe we do operate in the Public Safety and/or Special Emergency Radio Service.

It is also required by FCC Regs that each station have their own copy of FCC Part 90 Regs. So where is yours? Get it and read it sometime.

I am the webmaster for popular-communications.com and I would like to respond to this gentleman's comments. First, as you can see from the URL,which begins with https, it is an address on a secure webserver. If you go to the order page, you'll notice that your web browser does display the lock symbol (Netscape) or the key symbol (IE) indicating a secure connection.

The gentleman who posted above is corrected that the store software e-mails your order, but the e-mail box is on the same physical server as the secure webserver. No one on the internet has access to that mail box. The mail never actually leaves the machine on which the secure webserver runs.

When there are orders in that mail box, they are dumped to a printer that is connected to the 'pocono' server and faxed to Hicksville for processing.

I hope this information is helpful.

Well it would be pretty easy to buy one of the metal stick on units. They have an adhesive that holds forever, but I personally hate to "stick" anything on my radios. I found a thin nylon cell phone pouch at Meijers for $7.00 made by Samsonite. It fits pretty good and holds the unit securely. I would imagine you could find an appropriate sized "Pouch" at AES as well.

Regards .. Larry

It is not a filter or a holding pen, morse code is just what is says it is "The Code invented by S. Morse" as in Morse's Code! If Groucho Marx had invented it we would be argue about Marx Code!

And is it a filter? "NO" because stupid jerks and MENSA members can both learn code and pass the test!

What we need instead of Morse Code testing is an intelligence test, in other words Are you smart enough to use a Radio on the Ham bands using a little commen sense? If not no license! Come to think of it that wouldn't be such a bad idea for New Reader Programs either! Mmmm.........

-- The problem with "mag mounts" is they have no ground except what they get
with the magnet! An old ham (who is actually younger than I am) said run a
ground wire from the frame of the car to the pl-259 connector after it's
connected to the radio using a heater hose clamp to attach the wire. I have
used this method and it also has the added benefit of less noise and a better
receive.

Bull! If it WAS made, It was an IMmature, NO guts, IRresponsible, STUPID
decision...

One more entity bowing to BIG BROTHER. Why should private businesses watch out for BIG BROTHER'S interests? Is this company, or any other, getting PAID to do this? I don't think so! I find it strange that all this crap about modifying scanners being so illegal, and yet, you can still find PLENTY of information on how to do it on AMATEUR RADIO PACKET BULLETIN BOARDS...If all this is SO ILLEGAL, why do AMATEUR'S, and their ORGANIZATIONS (including ARRL) publish this info? Some Americans are unique in that they seem to enjoy having their freedoms REMOVED. Well, listen up..They ARE being removed piecemeal...Enjoy!

4011. Antennas @ NASCAR race

Newsgroup: rec.radio.scanner
Date: 1999-06-05 00:00:00 UTC
From: JA Moran <john@analon.com>
Message-ID: <375970D2.9AEB10F0@analon.com>
Source record: 116245
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Whenever I go to a race at PIR (Phoenix International Raceway) nea Goodyear, I take several antennas. In addition to a flexible rubber duck that works good over most frequencies, I also take a high gain telescopic antenna that's good for bringing in the weak signals. In additon to the car frequencies, I monitor the TV production frequencies, Track control, security, and also the local Police and Sheriff frequencies.

track control and race operations usually are on the same 464mhz frequencies. The TV and radio operations usually are on 450 or 455mhz frequencies. The Sheriff uses 460mhz frequencies.

JOHN

After the race, I did not believe what I heard on an 870mhz frequency. Someone ws making airline reservations and gave their name, address, and credit card number right over the air. I will not give out any sensitive informaiton on a radiotelephone of any kind... I call back using a land line!

>

I'm not sure if you mean about the information that can be gathered or
about my cordless phone. As far as the information that can be gathered, I
think it goes without saying that the general public don't think of their
cordless phones as radios which are transmitting their conversation all
over the nieghborhood. Therefore, conversations can be quite candid.

As far as the security of my digital spread-spectrum phone, I am completely
convinced of its security as far as scanners are concerned. I have
listened to the signal on my scanners and it sounds like a steady stream of
static. The signal is also very weak, due to it being spread-spectrum,
that without the squelch almost all the way open my scanner will miss it.
The phone, however, has a range of about a couple hundered yards or so. So
as far as the common scanner user is concerned, the phone is 100% secure.
I wouldn't use it otherwise.

SETI is Search for ExtraTerrestrial Intelligence. They have been
searching
the radio spectrum for signals from outer space which might indicate
intelligent
life elsewhere in the universe. They have been doing this since the late
'50s I
believe. I think the movie 'contact' was based on them. By downloading
the program you help them analyze their data on your pc when your are not
using it.
Neat screen saver shows 3d graph of program running. check it out.

Uniden should have the listing available on thier website or you can look on the back of the scanner where the adapter plugs in. there should be a voltage rating probably 12V and a polarity indicator showing weather the tip needs to be a positive or negative.

4038. AR8200 Software ?

Newsgroup: rec.radio.scanner
Date: 1999-06-05 00:00:00 UTC
From: Chuck Bird <bird@whouse.com>
Message-ID: <7ja1db$ql7$1@news.casema.net>
Source record: 116337

Hi,

I just got my 8200 with interface. I downloaded AOR software latest version but is not very good software.

Any suggestions for other software ?

I found Radiomanager, ARC8200, scancat but did not have time to give them a good review myself.

I'm looking for good software to setup/organize the 1000 channels and maybe some remote scan control but setup is important because 8200 will be in my car most of the time.

Hopefully some of you already have an opinion about these packages or other suggestions?

Tnx,

Chuck, CA

I have to agree with the "low life" portraial of scanner owners. I think the NEWS sharks "play-up" to the GOV'T & FCC's desire to squelch ALL receivers NOT restricted as THEY think they should be. The gov't LIKES absoulte control. I like to know where the cops are! (you'll know where the best donut shops are!!) NO, seriously, you do have the right to listen to ANY frequency unless the gov't forgot about the FCC COMMUNICATIONS ACT of 1934 ! I know dozens of "upstanding" people monitoring with scanners who HELP POLICE and FRIE DEPARTMENTS!

Some years ago, I monitored a shooting at a salvage yard, was in my car and knew the area, the sheriff and deputies. They were short of "lookouts" to watch the approx. 10 roads and rail-road tracks leaving the area. I offered to help and was promptly deputized AND given a small 38, since the suspect had shot the yard owner and was considered "armed & dangerous"! It turned out there were 2 guys doing the shooting and one we helped "nab" that night. (the canine dogs were with us too!)

I used to help the cops QUITE often, since they don't know the "ins and outs" of alot of areas. I was 16 - 18 yrs old then. When with the fire department (volunteer), scanners in vehicles and at home were the ONLY way to get the fire fighters to the scene at that time! And the costs of the scanners and accessories were proudly borne by the owners!!

I was in the FD for another 10 years (about 1985) and scanners were STILL
preferred by alot or personnel over the Plectrons, Federal & Motorola pagers.

As with anything, there will be a few XXXX types that abuse the right, so lets go after THEM with "gusto", instead of blaming the "general public" and making ALL suffer!!

>the ECPA was being drafted and discussed?
>
> - Clint Bradford, ATTENTION to Details

If you would pay attention to the details of how ECPA was passed into law, and how its successor TDDRA was also passed, and how scanner hobbyists have been consitently railroaded by congresspersons who are bought and paid for by cellular industry campaign contributions, and how the cellular industry promised Congress that they would soon provide encryption for their customers (a lie - they haven't done it yet and it's been 13 years), you wouldn't make the above statement or ask the above question.

Citizens had no say in the law. And yes, we do disrespect laws that violate our rights to equal representation. The Constitution guarantees that (the 14th Amendment) and it is supposed to be the supreme law of the land (Article VI). ECPA was not passed in a Constitutional manner, it is unenforceable, and deserves disrespect.

I couldn't agree more!!!

If people were really conserned about having their cell phone calls private,
then why in the hell do people talk on their phones in public?!?

It ticks me off everytime in a restraunt when the persons phone next to you
rings and they spend the next 30 minutes talking on it. Come on, if he really
were conserned with having a private conversation he wouldn't be talking in
public! What next, do we have to turn our ears off everytime we see a person
talking on a cell phone??? You wait, that'll be next!

I've written an editorial on eBay and cell phones on RadiosOnLine,
http://www.flash.net/~av8tor/radios Scroll to the bottom of the editorials.

RadiosOnLine <-- The only radio website with a copy of the Constitution,
please read it before King Klinton bans it too!

When I was 14 - 16, I had to
spend 5 hrs a day on subways
and buses commuting to the
Bronx (NYC) for H.S. As I
studied / dozed, I was fully
convinced that every motorman
and driver was a ham... The
air-brakes were constantly
singing CW. (As were the steam
pipes at home, the passing auto
horns, sparrows, etc. It was a
grand time!)

From: Daines Plantagenet Hornsby <plantagenet@my-deja.com>
Message-ID: <7je1iuvfh1@nnrp1.deja.com>
Source record: 116100

A June 6th article in the Talladega Daily Home stated:

"Talladega County Association of Volunteer Fire Departments is not happy because the Emergency Management Agency has only provided 50 percent of VFD members with the digital, state-of-the-art 800 MHz radios that other emergency responders have been given to use."

"On May 25, the Talladega and Sylacauga police departments gave up primary use of the radios,which were funded through the Chemical Stockpile Emergency Preparedness Program. That leaves the VFD Association members wondering where the radios are and why they can't use them."

What's going on here? Is Talladega county converting to a digital system for police and fire?

The FBI *did* use lowband during the "Freeman Standoff" in Montana a few years(1995?) back. I have access to HOURS of the standoff footage...Low band! 30mhz to 50mhz.

This was because of mutual aid reasons with the military and local agencies. It only take a phone call to DC and a truck full of various radios soon arrives.

Ever see a the WHCA Ryder truck on a Presidential visit?

A ridiculous statement. You need to review what the law is - and just exactly what the FCC's involvement is in the situation.

For sale this excellent scanner from Yupiteru which has Full coverage from
530KHz - 2039MHz.
overall condition of the radio is good. on the scale I give it 8.5 of 10.
8.5 due to the fact of small scratches on the radio. I am very picky
though, to you you may not even notice the small blemishes. Radio has Never
been dropped. For what I spent on it believe I would never want to.
this is not the M3 model
it is the 2 generation of the 9000 the one's which have the better
shielding.
included are the nicad batteries
carrying strap
original box
scanner of course
rubber antenna
any anything else that came with the radio but forgot of it
I will even throw in the ac adapter that I bought
and I will toss in a professional built data slicer also known as a hamcom
interface with jvfax/hamcom software that I purchased through the internet
from mfj enterprises

this is an excellent radio that is great but need the cash to drop in an
integra engine to my civic =)
and my local police went digital =(so what use is it now???

remember I am located in U.S. therefor no customs checks and no tax verses
if you were to buy it from out of the country.

this scanner is about 3 months old

I will take the best offer that I receive via email.
serious inquiries only please.

please visit pages below for more info or email me if you have any
questions.

With one VERY SIGNIFICANT improvement - it's 32 bit. And that can make
a difference - especially when the application itself is written for
32 bit environment.

Ted,
Maybe you should take the time and read through some of the
info that Rich Wells has taken the time to post to these newsgroups
and to set up on his website. I value Rich's information and opinions
over most articles in national publications because I know who it is
coming from and it is free of any corporation influence. If many of
these newbies would take the time to read these articles and figure
out how to use www.deja.com and Boolean searches on the internet, many
of their answers would already be available to them.

Wiggie:

As a casual scanner user, I once held Rich Wells in high regard
for the effort he made on his website and thought of him as
free from corporate influence, until I offered an opinion on
the high number of AOR8200s for sale on newsgroups and
auction sites. Rich Wells made it a point to use his website
to attack me personally, even after admitting the AOR8200
might have performance problems and not very user friendly,
Rich Wells is just another corporate goon!

don't bother...was not all that
informative. The guy is
selling booklets and he's using
this as a tease....

info he's putting out is
basic common sense: get
alongside a big rig to
avoid being radared

don't always run speed in lane
1,2. That's where the cops
usually point their gun

rain cannot be falling if a
gun is to work right...

etc.

forget this site. it
will cost u money for
stuff any cop will tell
you....

bill conduit
etc.

4076. Question about Ground Plane Antenna

Newsgroup: rec.radio.scanner
Date: 1999-06-06 00:00:00 UTC
From: batwanger@aol.com
Message-ID: <19990606175020.29264.00001179@ng-fl1.aol.com>
Source record: 116126

I have a Ground plane antenna. I think model 20-014, Its worked great in the Attic
for nearly 2 years, Well my new Residence doesn't have a Attic, so I was thinking
about standing the antenna up in a corner up as high as the raised ceiling will allow, But how will the lack of the 3 horizontal planes affect general reception?
In a variety of ranges?
Also what effect would flat white paint on the antenna have on performance?
Thanks for any help.
David

I found this on the web page, and found it interesting..

3.) Remember, that RADAR and LASER is not supposed to be used in bad
weather. If your ticket
was issued in such weather and the cop used LASER or RADAR, you probably
could win the case
as this is a good defense.

Is this true, can someone please explain it?

4079. FS: OLD hand-held scanners $10.00 ea.

Newsgroup: rec.radio.scanner
Date: 1999-06-06 00:00:00 UTC
From: John Strand <w6ibl@netxn.com>
Message-ID: <01beb06c$d7fea920$99c2ead1@arrc>
Source record: 116129

For Sale: Midland 13-903B UHF crystal-controlled scanner w/leather case.
Uses 10.7 crystals and is powered by 4 "AA" batteries.
$15.00

Midland 13-904 VHF crystal-controlled scanner
$10.00

Regency ACTR 10 H/L/U 10 Channel crystal-controlled
scanner circa 9/73
$35.00

All these radios work fine. I may even have a crystal you might need.
Scanners have telescoping antennas and rubber ducks, but no
AC
supply. A generic 6-volt wall-wart will work okay (center conductor
pos.)

Price does not include shipping. Payment via money order.

WSB AM/FM and Metro Traffic are pretty much all together.

455.2500 is the repeater output for WSB (aka Traffic Center). This frequency is the most active in the AM & PM rush. You will find Captain Herb & Jason Durden there, as well as the "Skyplane". As you will notice, this frequency IS inverted on the in/out. 450.2500 IS the input side. Herb and Jason are in the same helicopter (N2AQ owned by Helicopters Inc).

450.3875 is the repeater output for Metro Traffic. You will find Mike Oliver and who ever the MTC reporter of the day (who is also the "Skyplane reporter - N6555D which is owned by Aviation Atlanta).

463.900 is the repeater output for Total Traffic. You will find the "Traffic Tracker" units on this frequency. You will also hear TT talking to Keith Kalland on this frequency, but 99% of the time, you will find Keith responding to TT on 161.640 (a UHF/VHF duplex type mode). (The Total Traffic helicopter, as I was informed, is the former Georgia Pacific Long or Jet Ranger - white in color).

These are really the only 4 frequencies you will need to listen to, as the others are used to feed the radio stations with the live/taped feeds.

the 459 mhz assignments are for flite-fones used by private or corporatel aircraft for business or personal communications by crew or passengers, not for air traffic control,,,the flite-fones used on air carriers by passengers who pay a fee to make a "phone call" are mostly in the 900 mhz range

Joe Walker wrote:

Source record: 116138

First question, yes you can program a TT so you only hear the talkgroups you want. If you already know the talkgroup ID's it makes it easier (don't have to go searching for them). After the scanner finds the data channel hit MAN and that will take you to the first channel in the 1st scan list. Enter in the talkgroup you want and press E. After you enter in your talkgroups you can scan them two differnt ways, 1 scan the scan lists that you have programed or let it search all of the available talkgroups for that system, you will have to lockout all of the unwanted TG's thou. I prefer to just scan from the scan lists.

Second question, yes you can run software to give trunk tracking capabilities to a non trunk tracking scanner. I believe you need to use two scanners for this project, and one with a discriminator tap to monitor the data channel. After all of that mess I would think it would be easier to just buy a new trunk tracking scanner.

They are the LEERN & Interzone frequencies. Specifically, I don't know
which ones are used in your area, but the one's licensed statewide are:
154.935, 154.680, 155.370, 155.470 (Nationwide calling)
Central OH uses 154.935 & also the Cincy area.

And for 800 MHz, 866.5125, 867.0125, 867.5125, 868.0125, 868.5125. Although
OSP has not officially started using them, most cities using 800 MHz program
them into their radios.

One thing I can't stand is misrepresentation of facts.
That ABC News story coupled with the news stories of that
idiot in NY posting MDT data on his website sure make things look bad
for scanner
owners. I have yet to see a good story in which a scanner owner was
portrayed in a good light.
Back before all the crap with cellphones and all, I remember something
that
happened to me back in 1984......walking around town in broad daylight
with my scanner.

I had a NJ police officer tell me he was going to "confiscate my
scanner".
I politely informed him he couldn't do it and not be sued.
His attitude was less than professional.

I then politely informed him, that since his department's communications
were not encrypted
and that they were a public agency, put in place by the public, to serve
the public, and the fact
I was not using the scanner in the commission of a crime or felony, that
siezure of my radio
would then be considered theft since it would have been taken without my
permission.
Then I told him, he personally and his department would be facing a
lawsuit for defamation of
character and harrasment. I then directed him to look up the
Communications Act of 1934.
He made some a remark he could take the radio and "investigate to see if
it was stolen."
After producing a recipt, I told him look, either arrest me or leave me
alone, make your choice.
He handed me back my radio and said "keep out of trouble."
I said back, are you implying that I get IN trouble? He looked at his
partner, and I said, WELL?!?!?!
I turned around and walked away, but not before overhearing:
"That guy must be a fucking lawyer or something...."
I must say that was the only bad experience I had with police.
Now, some 16 years later, that cop and I are very good friends.
The majority of cops I've met over the years in various states I've
lived in have been polite
courteous, and some have even given me a few good frequencies.

My scanning hobby has lead me to pursue taking a CPR and basic first aid class (both of which
I passed last week) and I am currently looking into becoming an EMT.
If there are any EMT's that read this newsgroup, how difficult is it to become one??

Digital spread spectrum is not immune from monitoring. All that is
required is a digital spread spectrum phone and knowledge of the
servicemans key pad sequence for testing the tx and rx of the phone.
This essentially turns your phone into a scanning receiver.

Just to let you know that I heard about the possibility of a new binary scanner group being setup !.

Please go to the alt.config and show your support if you like for the making of a new BINARY scanner newsgroup, I myself am not the person who put it forward and I am not connected with him but I have been asking for one of these for ages and I know quite a few of you out there have aswell. It can only help make our hobby more informed and interesting, so pop along as soon as you can to ALT.CONFIG and see the posting for the binary scanner group and reply to it with your support

thanks a bundle everybody

OK, so we say Part 95 rules?? The amateur radio rules are part 97. CB is part 95, SUBPART D. Just making sure this is clarified to avoid confusion. Amateur specs would be in Part 97. Quite a difference there.

First of all who really gives a rats ass if cell capable scanners can be sold on EBAY or not! If the sellers REALLY want to sell them they will. EBAY or no EBAY!

Second, How does the FCC plan on restricting the sale and use of these scanners? Are they going to go over to every persons house that has a scanner and check to see if the scanner is receiving cellular? I don't think so!

> All Rich said is that a lot of people went out and bought one of
> these $600 beasts not knowing jack squat about basic scanning, let
> alone the very complicated AR8200.

Well, I hope I wasn't so "harsh!" ;-)

Tom was trying to convey that the only reason people were returning AR8200s was because they were, to paraphrase, a piece of crap (or nowhere near worthy of the $550+ price tag).

I said that I could understand that point of view but that I felt there was more to this issue. Like the AR8000, I felt that many users rushed out to get one simply because they had to have the best and heeded none of the warnings about "getting in over their head". This is a serious piece of equipment and therefore quite complicated. It's not your typical Uniden model that you poke in a few frequencies and press SCAN.

No matter what you say, you can't convey to some people how complicated these radios are.

So they buy them, get frustrated because they can't learn everything in one day, and put it up for sale. Instead of heeding the warnings, they learn the hard way.

> Bottom line is, a bunch of Joe Newbies bought radios that aren't for
> them! Then when they couldn't figure out how to use them in five
> minutes or less, they got rid of them.

I would consider that the abridged version ;-)

Ok here is what I know. a friend tried to do the dis tap to his scanner. I guess he Saudered the wrong pin. When he tried to remove it the pin broke off!!! So on the side of the chip where the pin broke off is the metal. Its there but you can barely see it. and the board where the pin should be can be seen. I put a wire touching from the chip to the board and it works. Sound is restored. Question Since the chip cannot be saudered what should he do. The wire can be saudered to the board but not the chip. Is there any type of substance that is like "gum" I guess that can be fitted between the two contacts that conducts electricity??? I think he is screwed...
And do you think a professional could fix it?? Any help and tips would be greatly appreciated.

Take the chip number and go to radio shack. Shouldn't cost more than $8.
They won't have it in stock but they'll ship it to ya in like a week.

I used to think I was safe also if the CHP was going down the opposite side of the freeway too, that is until my car stalled on Highway 14 one day and an officer gave me a ride to the nearest payphone. He took the opportunity to demonstrate the on-board radar, which tracked cars in front of, behind and coming towards the car in the opposite direction *while the cruiser was in motion!* Yipes....

Did I mention it was raining intermittantly that day? Didn't seem to affect the radar....

One could always drive the speed limit to avoid a speeding ticket.... Not very fun or high tech, but it works 100% of the time.

Naaah, that's too easy.

Im sure a professional could replace the chip. However, there is an epoxy that is conductive. Check your local radio electronics parts place. Ive also seen it in catalogues like Digikey and Mouser.

As a former volunteer firefighter for 10 years, and a current paramedic, I think that your last comment was less than accurate and less than fair. Please dont associate other peoples morbid curiousities and desire to be nosy with those of people who have a duty to respond and deal with incidents. I actually bought my first scanner a few months ago.. to listen to tower talk and figure out what things are like in my area before I start taking lessons.

I can tell by your post that you have no respect for volunteer firefighters and medics. You must be so very lucky to live in an area that has adequate resources to provide you paid fire and EMS 24 hours a day 7 days a week. 90% of the surface area of the USA is just the opposite and rely on people doing a professional job for free.

And yes, we have some ya-hoos... but then again, just about everyplace and everything does too. If you really loathe volunteers, then you better hope you never have to land off the airport or have an emergency that prevents you from making it to the city limits of a major metropolitan area, because thats who is going to show up.

Many of us were been using the Internet for years before MS-Windows could
even begin
to talk to the Internet using UNIX. Telnet, ftp, NFS, gopher, Archie and
hundreds of Internet apps were
online long before MS-Windows even knew what TCP/IP was! Remember that
Mosaic (Netscape)
was first written as an X-Window app!

>

>Now why would that be?
>The media listen to scanners just as you do ...
>
>-- Craig

I'm a media videographer.

they just do. it's strange how they do it, but only in tv news does this occur. they read and read what the wires say and use that as "facts".

yet, after I get away and bring my video in to editors and see what the wires are saying, it's not where I was when there.

it's a different world . Was I at that location, checking the exact time and location?

you have to understand how tv news is played and who are the players who gather it. usually college students ....

interns. they screw up and move on when their time is up and collect their "grade"...How Special.

TV NEWS is immediate. The more immediate it is the more happy the producers are. Guess what suffers. question mark.

NEWS authenticity. Accuracy.

When I do my sound bites of witnesses and officials to get the official story, what

comes out on the airing before
I get to the stations is very
different than what i am told...

facts are never fluid...they
get stale real fast and the
news readers are just too too
lazy to change them as they come
on with new info.

just get used to it. In tv land.

all they want is the money made
off tv advertising in the news
hours.....at some stations it's
3 and 1/2 hour of news in the
morning. Non-stop.

Listen to News radio...they
seem to do a better job.

HINT: lots of TV stations
use what they hear on News Radio
airings for their readers...and
most of the time Radio is right
on the money...but they make big
mistakes too.

IMMEDIACY is a non-fact item: it
guarantees things are going to be
wrong.

Read a newspaper. Your source
of accurate news reporting 98
percent of time...unless they
get their facts from the wires.

bill conduit
etc.

>guess he Saudered the wrong pin. When he tried to remove it the pin broke
>off!!!

How in the hell did he do that?!?!

Never mind, I bet I don't want to know....

So on the side of the chip where the pin broke off is the metal.
>Its there but you can barely see it. and the board where the pin should be
>can be seen. I put a wire touching from the chip to the board and it
works.
>Sound is restored. Question Since the chip cannot be saudered what should
>he do. The wire can be saudered to the board but not the chip. Is there
>any type of substance that is like "gum" I guess that can be fitted between
>the two contacts that conducts electricity??? I think he is screwed...

Does your pal have some superglue? If you hold the wire so that contact is restored, and then drop a little superglue on the connection, it should hold, provided the scanner doesn't get bounced around too much. Then add a couple more drops for strength. The key will be to make sure you maintain contact while the glue sets, so make your bonehead friend hold it in place for a good five minutes. ;-) Just be careful not to glue your hand to the chip and/or wire, or you'll really give them something to talk about at the emergency room....

Of course a professional would do a much better job, replacing the broken chip with a new one. Trouble is I would think such a repair would cost you at least $100 in labor alone, since he/she will remove the chip pin by pin, then remove all the old solder from the pads, then resolder the new chip in place and reassemble the radio. These folks usually work by the hours, so you can tack on a few more $$$ if he or she needs to crack open a handheld and disassemble half of it to get to the broken chip.

Tell me. Was this a new, still under warranty radio? If so, smack your pal upside the head for me, would ya? Thanks...

>I don't get it?

ummm.... OK.....

Well alright, here is the exact text off of the site, typos and all:
"Pro 91 Cellular Analyzer:

The Pro-91 is a handheld self-containd unit. The Pro-91 is housed
inside a Pro-91 Radio Shack scanner wich gives it a very unique
design. This unit will record the esn/min and other useful technical
information. Holds up to 1000 records in memory. Plus this unit
has a some special features. Includes: Detachable flexible antenna,
belt clip, rechargable batteries, charger/power adapter and leather
case."

along with it they posted a picture of the Pro-91 OBVIOUSLY scanned out of
the RS catalog. They didn't even bother to alter the picture to "show" this
marvelous device. There's no prices, no technical specs, nothing. That's it.

You mean to tell me I'm the only one who found this website even mildly
hilarious??? I had to hold the desk to stay in the chair!

What if I were to tell you that the Pro-91 isn't cellular capable? AT ALL???

Now do you get it?

Hmmm... maybe I'm just too easily amused. Perhaps I should email these folks
and <snicker> ask them how I can <ha ha> make my Pro-91 into a <ho ho>
"cellular analyzer" version....not.

Phil,

What exactly is there about the device in this link that you find
unbelievable? Before you answer, why don't you show the link to the
fraud investigators at your two local cellular carriers. They might
give you some interesting insight into ESN-grabbing techniques.

>
>Naaah, that's too easy.
>-Phil

Not 100% of the time. Don't forget about the "basic speed law," at least in California.
Many speeding tickets are written as violations of 22350 CVC, which says:

"22350. No person shall drive a vehicle upon a highway at a speed greater than is reasonable or prudent having due regard for weather, visibility, the traffic on, and the surface and width of, the highway, and in no event at a speed which endangers the safety of persons or property."

NO reference at all there to speed limits, which are addressed in 22348, 22349, 22352 etc.

Which means you can be cited for going, say, 25 in a 55 zone if weather or other conditions make it unsafe. OTOH, theoretically, anyway, you COULD try to defend a speed above the posted limit, under 22351 (b) which says,

(b) The speed of any vehicle upon a highway in excess of the prima facie speed limits in Section 22352 or established as authorized in this code is prima facie unlawful unless the defendant establishes by competent evidence that the speed in excess of said limits did not constitute a violation of the basic speed law at the time, place and under the conditions then existing."

Lots of luck on THAT one though.

Also, since their job and training is to observe and deal with vehicle operation and speed, day in and day out, most California courts recognize CHP officers as "expert witnesses" as to a vehicle's speed, whether or not their observation is supported by their radar gun's reading.

4135. european scanners?

Newsgroup: rec.radio.scanner
Date: 1999-06-07 00:00:00 UTC
From: sharding@well.com
Message-ID: <sharding-0706992222490001@juliet.dogcow.org>
Source record: 116065

I have a friend travelling in Europe (at least Germany and France; possibly elsewhere also) in a few weeks. I'm wondering if there are any good scanners available in Europe that aren't available in the US that I should consider having him pick up. I'm in the market for a new scanner soon anyway, so I thought this might be a good opportunity to get something I wouldn't otherwise have access to. Is it even legal to buy a scanner in Europe and bring it to the US? I'm never clear on the FCC regs....

Thanks.

sean

Usually the BNC connector is connected to the scanner by taking off the mobile antenae and affixing the outside lead-in on it.

Yeah...I'm not really that interested in the cellular capability anyway;
that's easy enough to get domestically if I really wanted it. I just
figured that there might be some nice model that wouldn't otherwise be
available (or would be significantly cheaper). However, I don't think it's
really worth the risk...

Who cares about what the military uses we are not the military
and by the way a few special forces still are taught it guess who?

Some people still collect and use old HF gear older than most of
us. Still sounds good on the bands so are they obsolete beyond
use? Get real and quit beating a dead horse issue. Remember and
respect your roots! After all without amateur radio opertors/developers
where would communications be today,so let us all enjoy the NOS... ok!

> i have two questions. can you program a trunktracker so you only hear
> certain talkgroups.

Yes. Their called scan lists. Current generation TrunkTrackers from
Uniden have 5 scan lists per bank. Each scan list can hold 10 IDs.
Once you have programmed the IDs, you put the scanner in trunked
scan mode and can then choose which of the 5 scan lists get scanned.

> and if you have a computer controlled receiver without
> trunktracker capabilities, can you run software to give it trunktracking
> ability?

Yes, you can use TRUNKER (Motorola), ETRUNK (EDACS) or TrunkTrac.
But you need two receivers; one to tap the discriminator to
decode the control channel via software, while the other is used
to tune the frequency to follow the desired transmission.

Try http://web2.airmail.net/lblant1/dfw/digital.htm

Yes, I happen to.

I find it amusing that people LOVE to scream "bloody murder" for perceived wrongs in newsgroups...BEFORE actually contacting the source and seeing what the true situation is.

This thread is a PERFECT example of someone NOT knowing what they were talking about, yet spewing false accusations regarding PopComm anyway.

I would like to think that either you or I would have waited until we had first-hand information BEFORE we slammed anyone in public.

At least, that's how I operate online. I could be wrong.

x:no-archive:yes

I am thinking of buying either a Uniden hand held
800mhz scanner. Which is the better the 80xlt or the
sportscat for just normal scanning? I'm not particularly
interested in sports channels. Also I noticed that the
frequencies on th xlt jump from 500 something to 800mhz.
Why is that? One more thing, can the xlt be modified like
I hear so much about? By a newbie that is. :)

Buddy, if you really do hear the "voices", you would know they don't
like it when you make fun of them. Beware! Yes, mine do Morse code, too,
but usually just jabber on in what I think is Cantonese.

Michael.

Try this searchable database, courtesy of the FCC:

http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/index.hts

You can search the data in several different ways; I've found it useful
in the past.

You did not offer an opinion Tom. You tried to make others
believe you were stating facts.

> Rich Wells made it a point to use his website
> to attack me personally

There's a good laugh! I invite EVERYONE who wants to stop
by and read our discussion on the AR8200. Point your
browsers to:

http://www.strongsignals.net/wwwboard

and look under the 'AR8200' thread started on 06/03/99.

Just because others don't hold your viewpoints doesn't
mean they're on someone's payroll. And the discussing
of viewpoints is hardly what I would call a personal
attack (more like an persecution complex I think). And
it's fine if you personally want to despise the 8200.
Just don't expect everyone else to as well.

> even after admitting the AOR8200
> might have performance problems and not very user friendly,
> Rich Wells is just another corporate goon!

That will be the day. Especially since I have almost no
contact with the manufacturers. If you knew anything about
what you claim to, you'd know that most manufacturers don't
think too much of my reviews since I can be overly critical
and it peeves them to no end since they don't get a chance
to 'approve' them like they do for the magazines.

>In a variety of ranges?

Quite a bit, though you may find it still adequate. The GP radials not only determine the 'take off angle' ie gain, but also the counterpoise by which the antenna is resonant. In lay terms, it will be to some extent more numb across the band.

>Also what effect would flat white paint on the antenna have on performance?

None.

>There are may so called secure sites that are hacked everyday.

Doug,

What Keith says is right, I too have seen this happen quite a bit - look
what happened to EBay not so long ago....

To say that your site is "totally secure" is dangerous, I too have told my
clients their sites were secure (back in the days of my inexperienced youth)
and they got hacked anyhow. Nothing can be considered "totally secure", not
even the US mail.

However, I do have an idea which can help you. If you feed the emails to an
encryption algorithm, that will add a whole new level of security, since it
would be very difficult to determine where the numbers were stored and what
they were. Then, you could download the messages locally and decrypt them on
your offline PC, to ensure no one has access to the decrypted emails, and
process them as normal.

You could even put out some "bait" files using one of those so called
"credit card generators" that would contain a bunch of bogus card numbers,
so if someone did hack the system, they'd probably take the "bait" and
unwittingly alert the credit card companies of their existance when they
tried to use them. I'm sure as an authorized merchant you guys get a list of
stolen card #'s to watch for, this would be perfect for the "bait". ;-)

Best of luck on the site.

-Phil

PA. TURNPIKE UNITS
150-series are Ambulances 200-series are tow trucks
300-series are State Police 2000-series are highway maintenace

Police & Maint/Work Crews use same channels on.
PSP Troop T handles patrols on the turnpike. ALL Troop T dispatch
is done from Harrisburg. System is linked via microwave.

Pennsylvania Attorney General's Office

154.950 (F-1) -Drug Enforcement Mobile-to Mobile
155.445R/XXX.XXX (F-2) -Drug Enforcement Dispatch
155.490 (F-3) -Drug Enforcement Regional (CLEAN)
156.090 (F-4) -Drug Enforcement Special Operations
460.200/465.200 179.9 Department of Justice North Repeaters (F1)
460.475/465.475 179.9 Department of Justice South Repeaters (F2)

Use depends on if one of the channels has been assigned to local agencies.
Western PA is primarily 460.475

Pennsylvania State Police Liquor Control Board Detail>

158.7600R/156.0150 151.4 F-1 (Phone Patch Capable)
158.7600R/156.0150 123.0 F-2 (No Phone Patch)
453.1375R/458.1375 Harrisburg
45.3000 Simplex Portables (Old System)

Pennsylvania Emergency Management Agency (PEMA)

PEMA uses 5 channels:
453.525/458.525 Main Repeater
453.350/458.350 Mobile Repeater
453.525 Simplex

453.350 Simplex
158.835 VHF
45.300 (Old System)
PEMA uses DIFFERING CTCSS (PL) tones for various counties main
repeater as follows:

Allegheny Co. 210.7
Armstrong Co. 103.5
Carbon Co. 136.5
Clearfield Co. 179.9
Fayette Co. 118.8
Indiana Co. 136.5
Lawrence Co. 156.7
Washington Co. 156.7
Schuylkill Co. 210.7 rpt. tx 179.9 Input
Somerset Co. 136.5

PL is NOT used on 453.350 the mobile repeater or simplex.

169.425 PEMA Rain Gauges
169.500 PEMA Rain Gauges
169.525 PEMA Rain Gauges
170.275 PEMA Rain Gauges
171.025 PEMA Rain Gauges
171.085 PEMA Rain Gauges
171.125 PEMA Rain Gauges
171.850 PEMA Rain Gauges
171.875 PEMA Rain Gauges
412.625 PEMA Rain Gauges

Rain Gauges are scattered throughout the state, and transmit
data on the above
frequency back to the local EMA office. At that point it's
collected on a
computer using IFLOWS software, and relayed to PEMA HQ in HBG via
Ku band VSAT
satellite system.

PEMA also utilizes the Ku band satellite system known as SEVAN
to send
messages to local EMA offices regarding events around the state,
and weather
information from the NOAA Weather Wire.

SEVAN also provides for a voice channel to all EMA agencies,
and a video
channel from PEMA HQ.

Model: 2995A, AM/FM and 4 channel scanner from 150 to 174 Mhz. An older 70's type where you analog dial in the freq for each channel, click it in for each channel and then listen to the radio or the 4 channels scanning. Good shape and it is portable but not that small. You would take this on a picnic or to a gathering but would not want to tote it around if you were hiking. Will send .jpg's at your request. $30 shipped to your door.

>Phil, I'll leave it to you to figure out what part of the
>audio chain you're overloading...

;-)

I think I know what you're referring to, but the mic input is set very low,
as is the speaker volume. Nonetheless, the audio sounds distorted -
"funny" - probably because there is no filtering occuring. I think this the
"distortion" the original poster was talking about. The original question
was "Should I hear something?" to which the answer was "Yes, but it'll sound
funny".

I probably should have clarified that in the first place.

Preferred Customer <@gte.net> wrote in message ...
>when depts. go digital how can we monitor them anyone know.
>

You'll have two choices:

1. Wait for a company to market a digital scanner. Price TBD, but a conversation I had on the APCO25 mailing list shows that there definitely is a market for such a goodie amongst the public safety agencies themselves, who would rather spend < $1000 on a receiver than $3000+ on a console for interagency comm's. I think a full fledged APCO 25 compliant digital receiver should sell well for about $950 to $1000 per unit.

or

2. Go out and purchase a digital radio and program it for RECEIVE ONLY on the freq's you want to monitor. Price $1000-$3000 dollars + programming costs.

>free from corporate influence, until I offered an opinion on
>the high number of AOR8200s for sale on newsgroups and
>auction sites.
You have got to be kidding me here.

Rich Wells made it a point to use his website
>to attack me personally, even after admitting the AOR8200
>might have performance problems and not very user friendly,
Get me a shovel....

All Rich said is that a lot of people went out and bought one of these $600 beasts not knowing jack squat about basic scanning, let alone the very complicated AR8200.

Many of us are play the comical role of Tim Allen on Home Improvement, who upon buying the latest techno-gadget promptly fling the manual over our shoulder and grunt "Manuals are for illiterate losers, augh, augh, augh!" and proceed to screw the darned thing up beyond belief, then after spending hours trying to *skim* the manual (nope, we haven't learned yet...) to find the magic keystrokes that will restore the thing to normal we give up in disgust. Now that $600 radio is a very expensive paperweight and all of a sudden there is that empty feeling in the pit of your gut that you just blew HOW MUCH MONEY???? So you sell.

My father in law owns the predecessor to the 8200, the 8000. He has had that thing for about 4 years now, and he is not the Tim Allen type. In fact, he is more the opposite extreme, careful and meticulous to where nothing gets touched until the manual section for that part has been studied. Here is someone who has read the manual front and back 20 times over, easy, and he is still discovering features in that radio - features that aren't in the manual, I might add. He's been into scanning since the 60's, and even has one of the first issues of Police Call ever made. Not a newbie, by a long shot. I value his opinion over anyone else I have ever met when it comes to scanning (and dealing with his daughter<g>) and he highly recommends the AOR radios, owning both the 8000 handheld and the 2500 (I think that't the one) base model. It is a scanner for the true die hard scannist. Not for Joe Newbie who "wants to hear cell phones".

Bottom line is, a bunch of Joe Newbies bought radios that aren't for them! Then when they couldn't figure out how to use them in five minutes or less,

they got rid of them.

>Rich Wells is just another corporate goon!
>
Right.... and I'm the Spruce Goose, clearing for takeoff.

Saw this in Alt.2600 which is good for mindless entertainment every now and then.

Make sure you have no soda or anything in your mouth that might splatter all over your computer when you laugh, and then click on the link: http://www.angelfire.com/biz3/xcomm0/pro.html

These guys ARE kidding, right????

You gotta see it. That's all I can say. I can't believe anyone would be dumb enough to fall for this. Then again......

Oh well, just go look at it. Good for a laugh if you're Monday is going anything like mine has.

No.

See: http://w5gb.nmsu.edu/kc5kto/base.html

It's a workhorse, GRE-manufactured unit based on the PRO-62.

You should list your radio on alt.over.priced.cb NG or maybe the
rec.chicken.channel.crap NG

My point is, if their such good radios why did Cobra quit making them?

BTW they are only running $175 for perfect and $125 for scratched & dented!

> TIA-rv
>

I really don't think it matters too much. I've used various types of coax with the 200XLT & other scanners, and they still work. But as a general rule I normally use 52 Ohm RG58. I have also used 75 Ohm TV coax. It's a different story when you're using a transmitter and want to match the impedance for a good SWR. With a receiver it doesn't matter that much.

Tom

I was doing video on the
Oakland side of the
Earthquake where the
CYPRESS freeway collapsed.

did you know that most tv stations
were off the air for a while...?

KRON had a back-up system and
was the only one on for that time.

electricity was out.

the media was hitting at whatever
info people were calling in
to the stations's that could
get through. for four hours
it was touch and go.

by air time they had their choppers
up and were doing aerials of
all adn still could not get it
edited.

Radio was the only honest media
source then...those that were still
on air.

don't bat the media around then,
it was a very very horrifying
situation had you actually
been there.

communication was not up to snuff.

GEE, I wonder why?

bill conduit
etc.

even police communications were
down...with fire. on the EAST
bay side. SF similar.

Good point. In fact, it doesn't matter whether he has such a device for sale or not. The mere offer to sell a device that will capture cellular subscriber information is a Federal crime in the United States.

In most states, and certainly for a Federal Officer, the
"certification" process for someone to be quailified
on the RADAR point out clearly that you have
got to visually estimate the speed of the vehicle,
and THEN, use the Radar.

One of the phases of certification is actually going
down the road with an instructor, and saying
outloud the visual estimate, then the radar is turned on.

Is that what happens in real life, well, not all the
time.

Greetings from the States.
Upper and Lower Side band can be used on H.F. and V.H.F. and maybe
U.H.F. I guess it all depends on what country you are. Side band is
usually used in conjuction with A.M.. A.M. contains a carrier wave and
two side bands-upper and lower. Now here is the situation:
You are transmitting on 27.4050 Megacycles in A.M. mode.
(27.4050 or Channel 40 is the Upper limit of the Citizens' Band in the
States.) and you are using 5 watts. The Channel is clear and there is
only you and your friend on the air. All of a sudden you get an inkling
to raise your power but you know that Linear Amplifiers arre illegal.
So what do you do, you switch to sideband. It doesn't matter if it is
lower or upper. Now, all of a sudden you are transmitting farther. How
did this happen? Well this is do to the fact that by transmitting in
sideband, you have instructed your radio to quit transmitting one side
band and the carrier wave but you are still trasmitting at 5 watts.
Well that signal will go farther becasue it does not " weigh " as much.
Same thing works for the H.F. bands and V.H.F.. Now because you ar
listening to this on a scanner, you have to fiddle around with the
clarifying nob to adjust the voice. If you do not do this then you will
get what sounds like a scrambled voice. If you get it just right, then
you will have succeded in hearing a normal voice. Remember though a
sideband signal is much narrower then a regular A.M. signal.

There is also a method called Amplitude Comparnded Side Band which is used in the 220-222 Megacycle range in the States and at one time; I read or heard about Independent sideband. Independent Sideband, from what I understand, lets you transmit/recieve to different signals at the same time. Well somebody that know more then I will be able to tell you better. Also it seems that most Mores Code signals are in sideband. Why? I do not know. Well I am not a Rocket Scientist. Hopes this helps. I am not a Radio Enginner this is just based on what I read in books, magazines, and on; of course, the internet/www.

sorry to inconvenience you all but I was wondering something....

I have a cheap little Pro-36 which I use all of the time... I realize however that I am missing a lot with this type of
device. I would like to purchase a large full featured scanner that will let me scan the largest number of freq.
possible and as quickly as possible. I would like to interface this scanner with a PC and log information on any
channels the scanner picks up a signal on. I would like to record freq., time, date, strength of signal etc. I would
like to let this run for a week or so eventually put the info into a spreadsheet type program for analysis.

Is there a scanner and software package that does this sort of thing? I really know little about what current systems
can do.

Last but not least, I often pick up what is obviously data (modem type sound) on my scanner and was wonder how hard is
it to decode this type of info. I would imagine it is very tedious and difficult, but is it possible realistically to
capture a high quality recording of a couple minutes of data transmission and decode it?

Sorry to bother you all, if you could give me any info and hardware/software recommendations, or at least point me to
where I can find the answers to these questions I would appreciate it,

Thanks,
Rob

If you have a dead battery pack, open it, remove the old batteries, and replace them with NiCad AA's with solder tabs. Quick, easy, and if you get batteries from a surplus house, cheap.
Hope this helps,
George

IF you have any questions on cell cites I built them for 2 1/2 years for GTE Mobilnet, Airtouch, US West Cellular, PACBell, Sprint PCS.
A Cell cite is a computer controlled multi channel repeater. The mother site controls all the sites in the system. For instance you make a call..\
the system checks to make shure you phone id number and your transmitter signiture checks out with it's own records and the same time it is assigning you a Hex channel number with a transmit and receive pair 45 mhz apart, the lower is the phone transmit the higher is the cell transmit. if your phone checks out ok, if places the call. During the call the site see's that your power on you phone needs to be incresed. So on the date channel that the phone is allways listening too, even when the phone is sitting there in your seat in standby. So your phone increses it's power. But another site is seeing your signal stronger, so it will then set up a handoff with another site and another HEX channel. And when it sees it is the proper time, it hands it off to another site. I hope you see how complex of a system, but what a simple idea.

And when you are hearing a cell conversation on a frequency above 896 it is probably a internal product of the scanner itself. Here is how you can figure it out. (Any to frequencys will produce in a mix the 2 original freqs and the sum and the difference) IF(ie. 21.4 Mhz) - the original freq on your scanner, and it will probably fall in one of the cell sites hex channel outputs.
Trevor Harris Former Sub Radioman, 73's brother

Hey Phil, You ready to order your Pro 91 Cellular Analyzer? only $2700!

I got curious and had to ask the guy about it. I asked him how it differed
from a regular scanner. I recieved a quick response.
Here was his reply:

(quote)
Hi,

The Pro-91 differs from a regular scanner becuse it is a cellular scanner.
It records the esn/min from cellular phones. It also has a special startac
feature that allowes you to program a startac with the scanner.
The Pro-91 is a Radio Shack Pro-91 scanner that has been reprogramed to
intercept cellular frequences.

The price for this item is $2700

If you have any questions please email us.
(end quote)

Too bad he can't sell it on Ebay!

4237. Re: AR1000-PROgrammit

Source record: 115990

Ira,

I ran into the same problem when I ran John's latest version of
the PROgramit software. I could operate each button via the interface
while in the manual mode but the scanner would error out when downloading
banks of frequencies. Seemed to me that the interface was operating beyond
the scanners ability to take in the data. So... I changed the delay factor
(determines how long a key is held down).

Select "Settings", then "Configure Active Scanner". Next select "Port" and
change the delay factor. I bumped mine up to 10000. After that, it worked
perfectly once again. You may need to adjust this figure depending on
your setup. I tested this on a PRO-2026 using a 486 80MHz computer.
Hope that helps,

Robert

Sean,

It isn't legal to bring non FCC approved equipment back into
the U.S.A. I recently visited England for two weeks and "considered"
the same idea. If he gets stopped during a search and if (big if) the
inspector knows what the new radio is capable of, it would be
seized and your buddy would probably be fined. Considering
what bad press the cellular scanners are getting lately, I have
a feeling that if he did get caught (however unlikely), he would be
made an example of. Hope he isn't a good buddy if he gets
caught! And no, I didn't buy a non-US scanner. The risk was
too high for me.

Disclaimers are now showing up on European scanner websites:

"IMPORTANT NOTE FOR POTENTIAL CUSTOMERS
NOT RESIDENT IN THE UNITED KINGDOM..."

http://www.javiation.co.uk/

Two other methods...

1.carefully chip off a bit of the plastic case on the IC, and then solder
a wire to the exposed stub.

2.use a conductive ink pen(I like the Circut Works one myself) to extend
the pin stub enough to work with(the ink CAN be soldered to if neccessary,
but it's tricky to do).
A variant that should work well is conductive epoxy, or other conductive
glue.

personally, if #1 is not a option, then I'd replace the IC, unless it was costly or rare.

Frequency, AM and FM modulation are all products and natural acts of nature, thus we all have a right to listen to any frequency we please.
If people want their information not to be considered free speech, then they need to conceal it using modern
day encryption.

I was just running here to post the price, looks like you beat me bastard.
Can you believe the nerve this guy has? I feel like reporting him for fraud.
Especially for wanting to charge $2700 for something that costs $130.
Amazing!

Who in the heck drives the speed limit except a bunch of losers who drive in the fast lane, bitching about how everyone is trying to run them over?
Nooo, don't tell me, you have to be a HAM as your logic is based on ideals instead of cold hard reality that people have to function and might feel a need to hurry.

> >One could always drive the speed limit to avoid a speeding ticket.... Not

I knew a guy that was cited for CVC 22350 unsafe speed several years ago, he was cited for 80 in a 35mph zone at 4 in the morning. He went to court and fought the ticket and won. He called the city and got traffic counts for the road where he was stopped and cited and along with the traffic counts he did, he was able to convince the judge that it was safe to go 80mph in the 35 zone.

The judge liked the work he had done and the cop couldn't prove that it was unsafe so out went the ticket. The cop couldn't beleive it and actually told the guy he was impressed with his work.

Where there's a will ... there's a way ...

>;-)

>I think I know what you're referring to, but the mic input is set
>very low, as is the speaker volume.

You've got the mic input set very low because the discriminator audio level is much higher than you'd get from a mic. I have to wonder if the sound card can properly handle that input, even with the gain turned down. Just for laughs, why don't you try sticking a 10-1 voltage divider between the discriminator and the mic input and see how it sounds? If nothing else, you can take satisfaction in having a proper impedance match.

>Nonetheless, the audio sounds distorted - "funny" - probably because
>there is no filtering occuring. I think this the "distortion" the
>original poster was talking about.

OK, so: "filtered audio minus filtering" equals clean audio, (AKA "distorted" filtered audio)?

I'm getting the hang of this...

>The original question was "Should I hear something?" to which the
>answer was "Yes, but it'll sound *funny*".

I just checked the discriminator tap on one of my 43's with my old Realistic LV-10 stereo headphones (150 ohm elements, 300 ohms total series resistance, plus 0.1 blocking cap in scanner, no extra amplifier); The audio level is about right for comfortable listening - not faint at all, and is not distorted, but does have considerable high end (hiss); CTCSS and low speed trunk handshake data and disconnect tones come through quite clearly, so OK, I'll accept "*funny*" as the technical description...

BTW, for those who want to try this at home, be kind to your scanner and add a K or two of series resistance between the discriminator and the 'phones.

>I probably should have clarified that in the first place.

No fun in that.

I know, some people get up in arms over anyone showing the slightest technical interest. EVERYONE who ask gotta be out to rip it off, right?

Just like the people who INSIST cell phones are private, and argue if you declare otherwise! I had a friend who was told by his cell carrier
that the phones were secure and COULDN'T BE OVERHEARD! And he was about to talk about something sensitive on the way home from work when he called me. I told him no, and rigged an experiment to prove him wrong, with a sixpack of Sam Adams as the wager.

I had him announce his office number (with voice mail) on the cell call, and ask anyone who's listening to call and leave a message. Well, he did, then said he'll call and make sure the mailbox was empty. He hung up and didn't call back for a LONG time. Seems he couldn't get through to his office, the line was BUSY. When he finally got through, he had a NUMBER of messages. Just imaging how many people called, got a busy, and didn't try again!

That six pack tasted sweet.

Don't just try any glue. Check at a really good electronics parts supplier and get some electrically conductive epoxy glue. Allied, Newark or other commercial parts supplier either have it or point you in the right direction.

However, it would be better to just buy a new chip and replace it. You may want to consider putting it in a socket.

While this could be a very legitimate product, what are the odds?

Just remember, some of the scanners that are out there have
incredible potential, but the processors are 'locked up'. If someone
were to have original source....

Or even, time on their hands and a mission goal.

It's not out of the realm of posssibility. Probability is another story
altogether.

But I would have to ask, if this guy really did do this, would he be
that dumb to try to advertise it on the internet?

A neighbor once, after months of torture, intimated voices emanated from her washing machine. She was genuinely afraid to use the device, and was certain it, or her house was haunted.

A little investigative work, and a choke on a 75 ohm feedline which was radiating, cured her curse. There must have been enough oxidation in the motor coupling to rectify, and in some way the "bowl" of the washing machine was working like a speaker.

She sleeps better now. Not a CW story, but "voices" none the less.

For sale this excellent scanner from Yupiteru which has Full coverage from
530KHz - 2039MHz.
overall condition of the radio is good. on the scale I give it 8.5 of 10.
8.5 due to the fact of small scratches on the radio. I am very picky
though, to you the blemishes my not even be noticeable. Radio has Never
been dropped. For what I spent on it believe I would never want to. this is
not the M3 model
it is the 2 generation of the 9000 the one's which have the better
shielding. Not the M2 though. The one that is CE certified.
included are the nicad batteries
carrying strap
original box
scanner of course
rubber antenna
super smiley II antenna **Great for 400Mhz. like police but sucks for
800Mhz**
any anything else that came with the radio but forgot of it
I will even throw in the ac adapter that I bought
and I will toss in a professional built data slicer also known as a hamcom
interface with jvfax/hamcom software that I purchased through the internet
from mfj enterprises

this is an excellent radio that is great but need the cash to drop in an
integra engine to my civic =)
and my local police went digital =(so what use is it now???

remember I am located in U.S. therefor no customs checks and no tax verses
if you were to buy it from another country
this scanner is about 3 months old

I will take the best offer that I receive via email.
serious inquiries only please.

please visit pages below for more info or email me if you have any
questions.

4261. Cobra 2000 for sale

Newsgroup: rec.radio.scanner
Date: 1999-06-08 00:00:00 UTC
From: Sam Wolinsky <jces9033@hotmail.com>
Message-ID: <7jj9e6rcr1@birch.prod.itd.earthlink.net>
Source record: 116014
Cross-posted to: rec.radio.swap,rec.radio.cb,rec.radio.scanner,alt.radio.scanner

. I have for sale 1 Cobra 2000 base station CB with the speaker.
Radio has been modified to cover from 26.815 Mhz to 28.045 Mhz. Radio
transmits 20+ watts, clarifier has been opened. I have received several
reports of good signal/audio from stations that are 30+ miles away from me.
I am not real technical so beyond what I have told you, I don't know
anything else about the radio.
I would rate this radio as an 8 out of 10. No scratches ect that I was able
to find. Also included is the original manual, original 1 year warranty
certificate, copy of service manual.
From what I have seen and heard, the 2000 is one of the top of the line most
sought after radios that was ever on the market in its day. After using it
for a brief time, I could see why as it is an excellent radio.
Price is $250 obo + shipping costs, prepaid via USPS money order.
References
available upon request.
Please contact me at jces9033@hotmail. com if you are interested in this
fine rig.

: Now why would that be?
: The media listen to scanners just as you do ...

During the Loma Prieta earthquake here in California, the media showed a) the collapsed section of the Bay bridge, The collapsed Cypress Structure freeway, and a couple of burning buildings in the SF Marina district. Granted, each one was a tragedy in it's own right, but the media used those shots over and over again to made it appear that the whole damn region had been shaken to the ground and set afire.

My wife and I were out of town on that day and had to infer from what the media *didn't* say, that our friends and house and pets were most likely fine.

What incentive does the media have to report *anything* accurately and objectively? Even the best reporters are forced to suck up ratings from the bottom of the pond.

Dont get me started :-)

Cheers,

Rick

>and then, what IS the purpose of you having a scanner ?
>.....entertainment ?
>or perhaps "infotainment" ?
>
What is the purpose of your asking such an obviously provocative question in a room dedicated to scanners?
Ignoring the attitude,I will submit that there are plenty of good reasons for using a scanner, besides the uses already posted by those working in the emergency/public safety field.
-A fascination with radio communications of any type (most radio hobbyists are fans of every type of radio service, scanning, shortwave, ham, CB, satellite, etc.)
-Concern for our own and our neighbors' safety
-Hearing news as it happens
-Some folks like to hear drivers and pit crews during auto races, others like to listen to comm's from railroads and/or airports-airshows. A perfectly good reason to own a scanner.
-Two-way business dealers get great use from scanners to find which freq's are available, tone codes being used, and other area-specific info important to the two-way comm. business.
-A big one for me is: When I hear a siren in my area, I want to know if it's a policeman or a fireman or an ambulance, where it's headed and why. It's MY neighborhood, and if the unit passed my house, I want to know why.
-Weather awareness and safety, plain and simple. I can recieve all of the NOAA Weather Service 24 hour stations in my region, and also scan the amateur freq's for the volunteer SkyWarn/stormspotters in my immediate area as well as farther away, to get a real grip on the changing and dynamic status of weather in my area, the tornado-prone Midwest. This alone is worth the price of admission...
To paraphrase Richard Barnett, a writer at Monitoring Times magazine:
"...we just want to know what's going on around us. We're taking a proactive approach in learning of this information almost firsthand.
We're not waiting for the TV news or the paper the next day...."
When I listen to an EMT trying to do his or her job, it is a cathartic experience. It puts me in touch with these everyday heroes, makes me pray for them and with them as they save lives, and make MY neighborhood and city a better, safer place to live and work.
I would also say that while curiosity is a driving factor in entering ANY aspect of the radio hobby, curiosity is human nature, and there are many FAR more shallow and disruptive businesses and "hobbies" than scanning, which have made a lot of dough appealing to human nature.
Give me radio any day, over a phone, a TV or a paper, if you want immediacy and humanity with your public awareness.
Mike

Date: 1999-06-08 00:00:00 UTC
From: swiley@starstream.net
Message-ID: <375d495f.346511925@news.pacbell.net>
Source record: 116022

Here it is, the whole enchilada:

AR8000 US Bandplan, FULL COVERAGE, never been opened for modification

OPTO Optolinx computer interface

OPTO Scout 3.0 with Reaction Tune & Cable
If you've never used or heard of reaction tune, it's real nice.
Basically your scanner, in conjunction with the frequency counter,
automatically tunes to any transmission in the area. It all fits on
your belt and under your jacket. Walking through an airport or
lounging at the resort will never be the same. Of course just driving
down the road can get interesting too.

OPTO 800MHz bandpass filter

OPTO Antenna Pack #2 (five antennas for all freqs)

Diamond Multiband rubber ducky antenna

Full Leather case

An external AUDIO DATA DECODING INTERFACE from the UK when it was
still cool to get those things. I have tested it and it works, but
decoding the faster data rates (2400baud+) will require the user to do
the discriminator output mod on the AR8000

A few SMT and through hole FM wireless transmitters with mics, small,
button cell powered, look like little bugs so dont step on them

All packaged in a nice thin laptop computer carry case

All manuals I can find will be included, which may be all of them

1st $950 prepaid money order only, contact me via email.
I pay shipping.
Pictures of the kit available if necessary.
Selling complete package only.
Located in northern california

I have one of those gadgets, and I would not part with it because they are HARD to come by. Mine is the SUPER CONVERTER II 8001...You know, the LITTLE one. You didn't state if you had that one, or the BASE model...Either way, I hope you are not SELLING it because you are TIMID about OWNING it, as it is NOT illegal to POSSESS it, only to use it to receive CELL PHONE CALLS. (Thats a bunch of hog crap too). I use mine to convert my local police frequencies (800 mhz band) to my 'OLD' scanner.. :) In case others don't know, RAMSEY ELECTRONICS, (RAMSEY KITS) sells a kit version of an 800 to 400 converter similar in performance to the SUPER CONVERTERS. Price is in the $40s. The GRE SUPER CONVERTERS have fallen to BIG BROTHER, just like DECENT scanners have...(Ever noticed that the ones you can buy now are JUNK compared to the 'OLD' ones)?

>Reinaga

On the contrary Robert, a wire CAN be SOLDERED to that broken chip pin. I know, because I have done it for others. Forget about 'GUM', and 'GLUE', that crap won't conduct current, (probably at high frequencies) good enough to work. All that could do is hopefully, help hold the wire in place. First, firmly grasp your kitchen sink spigot, as to GROUND any static charge you may possess. Then all you have to do, is take a very sharp pointed knife, or box cutter, and, (with scanner unplugged of course), carefully scrape some of the chip body material away from the broken pin. Only a small amount need be removed. Then take a small, low wattage, sharp pointed soldering pencil, and QUICKLY apply a tiny dot of solder to the broken pin. With the wire already soldered into the circuit board, QUICKLY put another dot of solder on the other end of the wire. Position this wire against the broken chip pin, and QUICKLY TAP it with the soldering pencil, and if you were careful, it is fixed! Permanently! I know this works, as I've done it at least 5 times, with no strike-outs... Good luck... Joey

Yeah, my grandparents used to have a house next to a HAM and my grandparents had a lightbulb in a lamp that talked
everytime the HAM keyed up.
Also, I had a HAM right down the street who just two years ago was making my soundcard talk.
Someone must have complained about him as he and his tower were gone less than a month after he was talking through my soundcard.

Well I get the bc80xlt and am curious as to different
thing that can be used as outdoor antennas. Say one slid a
hamster cage down onto a telescope TV antenna. Then
mounted this on the side of the house,
then attached this by a wire from the antenna to an antenna
that you stick on glass that then has another sticky part
that mounts inside, that then attaches to the radio??
Would that increase the receptivity? Thoughts? Thanks

> He took the opportunity
>to demonstrate the on-board radar, which tracked cars in front of, behind
>and coming towards the car in the opposite direction *while the cruiser was
>in motion!* Yipes....

As a California resident, I must agree. The CHP (and surely others to follow) use the radar mounted on the dash and it can indeed pickup moving vehcles (in inclement weather BTW) vehicles moving the other direction--weather the cruiser is stopped or rolling.

Ontario, CA motor officers are also employing a new radar system. Its a variation of the "point and shoot" method, with a twist... The officer has a "sight gauge" on the radar that acquires the vehicles with the help of a laser. EXTREMELY accurate <grins> up to 2000 ft. They have not lost a traffic case in over 6 months when that radar was used. It has also cut down on the number of people who try to fight radar cases with lame excuses as "It wasnt me that you got on radar", or "Hey, doesnt radar get screwed up in the rain?" <wink,wink/nudge, nudge>

Before you take out your flame throwers I have a good reason for needing to know this. I want to see how much shielding my ezpass is getting in my glove compartment when I'm using fastlane and vice versa. Along with the Maine toll collector too on the dash.

So whats the frequency kenneth?

Try my web page at http://www.paulcuni.com

DISRESPECT???? Hold on a minute here...Would you RESPECT ANY LAW, regardless of it's consequences? How many of your freedoms would have to be snatched away by YOUR GOVERNMENT, on behalf of rich, power hungy industries, like CELLULAR TELEPHONE? Don't you know THEY are the ones that got all that PRIVACY CRAP started, because they were lying to their customers about CELL PHONE CALL PRIVACY? By now, they would have been entangled in a mound of legal battles, had they not RAILROADED that GARBAGE through the necessary legal channels. Would you support a law that was diametrical to the US CONSTITUTION, like removing your RIGHT to HAVE AND BARE ARMS, just because a bunch of stupid lobbyist, (and their money), managed to get it THROUGH? Where does one draw the line, and challenge this willy-nilly, piecemeal removal of ALL our rights? Thank God we still have AT LEAST a PORTION of the Constitution intact, such as the part allowing me to write this. When ALL of it is gone, what then? Oh, and to answer your question about where I was when the ECPA was being DRAFTED... Like you, and everyone else, I was sitting here helpless, as the powers that be brought us down one more notch..OBEYING the law is one thing, RESPECTING it is another! ... Joey

The last freqs. I had were 154.430 Mhz which is also Monmouth Fire #1.
158.760 Mhz & 155.88 Mhz. I can't verify if any of them are still in use by
APFD but it's a start. Good luck.

I've gotten it working, but the shareware version is practically unusable with all decoded text going to the little 9-character scrolling window at the upper left corner of the screen. I think the crippleware should be modified so I can at least see how well it works before sending $$$ off to register it.

Source record: 115844

On the widely distributed document by Bill Cheek, he instructs the installation of a 2.2uF - 4.7uF tantalum capacitor on the discriminator output pin prior to an rca jack on rear panel. On the widely disributed schematics for a HamComm type interface(data slicer), the first component is usually a 0.1uF capacitor. My question is, should both capacitors be installed, or just one? Thanks for responding to the newsgroup.

Hello everyone!

I have a GRE 9001 converter for sale.
It is made for base receivers.
The unit is new and has not been used.
Box and all accessaries are included.

Again this unit is NEW. No scratches and
is in perfect condition.

All my radios has the 800 mhz portion
so I'd like to sell this device.

$110.00 includes shipping + insurance.

Please send e-mail for pic and info.

Thank you all.

Luciano

Try this URL, it is designed for visitors to DC a little while ago:
http://www.hyattsvillevfd.org/chm/guide.htm

You will get lots of action on the local (MPD: Metropolitan Police Dept) dispatch channels, so much that the scanner will tend to stay on one channel. Also lots on the DCFD dispatch channel. The federal channels tend to be a lot quieter, Park Police and Secret Service Uniform Division are some of the more active ones. Don't expect much from organizations like FBI and DEA; their headquarters may be here, but most of their field operations are not. Of course all the usual frequency sources are good for DC, such as
http://www.li.net/~j4dice/frequencies/DC/dcfreqs.html
http://w5gb.nmsu.edu/kc5kto/localfrqs/dc/dc.html

Happy scanning

x:no-archive:yes

Ok it's been two days now and something strange is happening
to me. I feel the need for more power. Some type of frequency
magnet, so to speak. There appears to be some signals that have
escaped my grasp. However with your help, possibly I can build,
from aluminum foil and other bits and peices, of this and that, the
frequency vacum that I so desperately covet. Along those lines
I have a motorola black box that someone gave me. I am told it is
a cell phone component of some sort. The model number is 51866A
and the S/N is 650DPSC647Y. Is there anyway this can become hooked
up to the scanner? Can I do anything with it at all. All I have is
the box. It has a coax cable mount and a 25 pin male socket. Thanks

A SLIGHT increase over the original price, but I don't blame you...These things are hard to find now. I have one of the PORTABLE versions, the 8001, and I am KEEPING MINE! Good luck...Joey...

4318. Cordless phone --> Scanner

Newsgroup: rec.radio.scanner
Date: 1999-06-09 00:00:00 UTC
From: "Marcus R. Matos" <raydr@minionsfromhell.com>
Message-ID: <PXB73.1350$h14.5496@newsr2.twcny.rr.com>
Source record: 115855
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I'm looking for a way to turn my cordless phone into a 47MHz scanner.
WAIT! Put your lighters away. Here's the deal:

It is a Southwestern Bell FF667 47MHz 25CH phone.

I have two other cordless phones, which are in use, and this phone does not get along with the others.

This phone will not turn itself on unless it recieves an "OK" from the base. I want to get rid of that. I believe it queries the base on 10.240MHz, because both the phone and the base have that crystal in it. The handset also has a 3.579545 crystal.

The handset has a "channel" button on it. What I want is this:
Say my mom is on one of the cordless phones. I would like to turn this one on, keep hitting "channel" until it hits the right frequency, and join in the conversation.

Does anyone know if this is possible? Anyone else interested in doing this? Let me know please. Thanks

What exactly do you mean by, 'BINARY'...What does this have to do with
scanning? I thought BINARY was a number system, used mainly in computer
terminology...Joey

The only use I could see for a binary scanner group is that it would be an accepted place to post zip files containing freq's, programs, etc. I think however, that this proposed scanner group is for image scanners only, not radio scanning. I could be wrong however....

That is a good one, probably the best as it will let you store a much larger alphatag than the others.

There's also the MS200 by Relm, and the AR8000/8200 series scanners.

A mismatch effects BOTH receive, AND transmit. But the mismatch between 50 and 75 ohms, like you said, won't matter much. The idea is, that it causes STANDING WAVES, both on transmit, AND receive, but the benefits of using VERY LOW LOSS coax, (like RG-11/U), outweight the effects of the mismatch...This is especially true if it is the type with the FOIL COVERING, along with the wire braid...This is the type cable operators use...Joey

Actually Mr. Young, I'm opposed to internationally mandated code testing. Just go look up that
statement that the FCC made that says the treaty does not specify what speed you need to learn
the code at. You need to know the code, but not the speed at which it is sent. I gathered this information from http://www.arrl.org/news/restructuring/98-143/nprm.html.

It's actually the radius gp300 that I am trying to find the frequencies for. Most likely, I'm not going to be able to get the radio and look at the serial number. If I were able to, would I find it on the back? I thought that you could tell what frequency a radio was using by looking at the atenna?

why not just disconnect the power cord.

why not look for any batteries that
may or may not be part of it...

probably not, but it never hurts to look.

when powering up, why not look for any
reset button on the xlt or a special
configuration that allows it to reset....

i don't have my manual handy...but i
have a 210xlt...let's see, which one
is it here...

on back of it no reset button.

but there is this black plastic
protuberance...what can this be?

maybe?

on front: well, let's see: no
reset button , gee.

try leaving power off for a few hours
and place it underneath a triangular
edifice you can make with coat hangers....

place it inside the triangle and that
should do it...for sure///so they
promise at the carnival shows....

bill conduit
etc.

Hi Don,

The 210's were notorious for the power transformer primary opening. Try hooking up a 12 volt dc source to the dc input and see if your scanner doesn't come back to life.

Larry

Joey,

Newer doesn't always equal better. But now you mention it, remember to throw away YOUR toys when they quit. It's us sparky geeks that are getting all the "broken" electronic toys for free because today's disposable society is too lame to try to fix it. Give the guy credit, at least he's trying. Food for thought.

And now that we know the true situation, it seems that my concerns
were justified. Or have you forgotten the incident where Kevin Mitnick
hacked into Netcom and was able to download a file of Netcom
customers' credit card info, which was stored in cleartext online?
Hopefully the webmaster, who we now know reads this group, will take a
lesson from history and NOT store his customers' credit card info
unencrypted in an online system.

And it's definitely a DELIBERATE misrepresentation of facts, too - ABC news itself makes extensive use of scanners in their daily news gathering activities. I guess they don't mind if the whole world thinks their news department is a bunch of emotionally disturbed social misfits. Apparently there is no sacrifice too great for the Almighty Nielsen Gods...

>I have to agree with the "low life" portraial of scanner owners. I think
>the NEWS sharks "play-up" to the GOV'T & FCC's desire to squelch ALL
>receivers NOT restricted as THEY think they should be.

Wouldn't it be ironic if the boneheads in the news media end up shooting themselves in their collective feet by provoking legislators to outlaw sanners, thus hindering their own ability to gather news?

RG-8 is only marginally good to about 500 mhz. The RG-11 is good to
around 950mhz.
Use the RG-11 _without_ the balun. The mismatch is only germain to
transmitters, the recever won't mind. The balun will cause more loss
than the mismatch.

Somewhere I hav a Mass of data from a fidonet discussion years back, I
find it I post it.

good signals... LCM

> percent pass requirement? 95%? Just a thought.

Part of the entry-fee for me, when I joined (and that was not too long ago) the ranks of the Ham community, was that several Hams had to hear me send, as well as test my ability to copy, for the sole reason that I had to demonstrate the technical ability to operate on the air. At that time, morse was used as a way to gauge that. The written was the other part of that assessment.

I agree with you that we should have some better technical depth, but also, I think, we should explore the idea of adding something that would encourage / guide new-to-the-hobby folks to better operating skills. If you remember, the typical cw exchange actually demonstrated proper sending etiquette. So if we eliminate such subtle promotion of good operation, then let's put something in the
written that tests / illustrates good operating principles.

Thoughts?

Tomas

Interesting comment - that in the US the Morse test is seen as a means
of showing technical ability.

Over here in the UK the reason for the Morse test as a means of going
from a Class B (50MHz and above) to Class A (HF/all bands) licence was
that some HF bands were/are shared with marine, and also that a 'Ham'
(we prefer to use the term 'Amateur') could be listening on any band,
and in either instance could hear a Morse distress call. He/she should
be able to read that message and pass it on to the relevant authorities
- although Heaven knows who would take any notice or be able to handle
it!

With the ITU scrapping the Morse requirement in a few years time we are
heavily engaged in a debate over the alternative means of permitting
access to the HF bands - some say the need to hold a Class B for some
years plus be supervised in operation over a period by a Class A
licencee should be enough, others (and the current trend) advocate a
Morse test at 5wpm send and receive. You can imagine the anger that
this latter suggestion is causing in the established Class A fraternity
who had to send and receive (and much more tightly than in the US) at
12wpm!!

I like the Japanese idea: retain the Morse test but at zero wpm!

Nothing is 100% secure. The phone is probably some sort of Direct
sequence SS, wich in itself is a lot less secure than frequency
hopping. So, with the right hardware, it's probably not that hard.
There's probably no encryption in the system, just a (for now)
unusual modulation.

Well, you obviously didn't own one....

The 202 was NOT designed to work outside of the HAM bands
on purpose. It was (undoubtedly) a 'management' decision. NO!
Not some BS of HAM vs public safety or other BS. The decision
was a strict tradeoff of the fact that Ft Worth (downtown) is one of
the worst intermod alleys in the US. Probably second only to the
128 loop around Boston. The decision was wide band coverage
vs good HAM performance. Since the radio was decided to be
an 'entry level' device (hey, budding HAMs are going to go to RS
to get started, but then branch out. Don't you think their management
realizes that fact?) they went with HAM performance.

As a cheap entry level radio, available on impulse buy at over 7000
retail stores in the US, and discounted on a REGULAR basis, it
was a winner, a bigger winner than RS expected.

No, you can't modify the HTX-202 or 404. (But you CAN modify the
242!!)

anyone see the adam-12 episode where malloy got shot? his radio mic
was smashed and the only way he could communicate was to 'key' the
radio on and off. he sent a bit of morse code, was cool.

morse code is pretty cool, you don't need a radio to use it.
a mirror and sunlight works too.

anyway, i thought i might throw this in. my repeater is
voice id heavy, i was asked to add more morse code id
in the mix by my friend. after this suggestion,
i made a few rotating bulletins with morse code followed
by a voice counterpart to assist a tech ham in getting some
copy practice right from my repeater. it appears to have
helped alot. upgrade in sight =]

You don't have a clue about what spread spectrum is based on your reply.

It has NOTHING to do with frequency hopping (which is not secure at all).
There is no such thing as "direct sequence" spread spectrum.

In a nutshell, spread spectrum works by taking the audio to be transmitted and breaks it up over the "spectrum" and transmits each portion over a different frequency simultaneously. Most spread spectrum phones are transmitting on 25 different freqs AT THE SAME TIME. Nothing like a 25 channel phone that only uses 1 at a time.

Judging from the ignorance displayed below, neither do you.

>It has NOTHING to do with frequency hopping (which is not secure at all).
>There is no such thing as "direct sequence" spread spectrum.

Look it up. Direct sequence spread spectrum does exist. In fact,
it's quite popular. Basically, you take a signal, modulate it
(amplitude, phase, or both) with a very fast repeating digital
pattern. This modulation is what spreads the signal. The receiving
end applies this same digital pattern to despread the signal.

>In a nutshell, spread spectrum works by taking the audio to be transmitted and

Umm, not exactly. Frequency hopping is where you hop from channel to
channel at a very rapid rate; however, you're only using one channel
at a time.

I believe what one hears on a scanner is much less morbid and much more professional than what one sees every night on the TV news. It is much less intrusive and disruptive to quietly monitor a scanner than to shove a TV camera into a victim's face or block emergency traffic by trying to go to the scene. Often what is heard on a scanner is more accurate and educational than information filtered through the media. I think every pilot out there has an interest in accidents that happen, not because they are morbid, but because they want to learn and avoid the mistakes of others.

You really think that would happen?? Just like the assault weapons
ban, it EXEMPTS the entertainment industry...

The media would probably campaign for an exemption, and get it.

4381. SO CAL: Public Safety Helicopter Airshow

Newsgroup: rec.radio.scanner
Date: 1999-06-09 00:00:00 UTC
From: Brian Humphrey <brian.humphrey@prodigy.net>
Message-ID: <7jm8av$uv8$1@newssvr01-int.news.prodigy.com>
Source record: 115930
Cross-posted to: alt.radio.scanner,rec.radio.scanner

The men and women of the LAFD cordially invite you to:

American Heroes Air Show
Saturday June 12, 1999
Hansen Dam Sports Complex
San Fernando Valley area of Los Angeles, California

This is a FREE event for the entire family.

Joining the LAFD air fleet will be public safety aviation teams from throughout the West. Along with numerous Law Enforcement, Fire and EMS helicopters and their crews, a wide variety of military and Federal agencies will offer a (rare) up-close and personal opportunity to examine their aircraft and converse with their staff.

Again, it is FREE and all are cordially invited. Don't forget your camera (and your scanner)!!

If you need more info, simply follow the Airshow information link on the LAFD homepage at:

http://www.lafd.org

The American Heroes Airshow is a privately organized event supported by the City of Los Angeles and the Department of Recreation & Parks.

Stay Safe!

Brian Humphrey
Firefighter/Paramedic
Public Information Officer
Los Angeles Fire Department

They really don't get any cheaper than the Pro 91 which can be had brand new for $199 at RS, or if you're resourceful, can be purchased online for less. I have one, and it's a great little radio - perfect for portable use. I take it everywhere, and it has the added advantage of using AA's instead of a proprietary pack, so if you're at an airshow or whatever and the battery goes dead, you just pop in some alkalines and keep running.

Uniden SportCat 150 Undocumented Features

I found an undocumented Uniden Sportcat 150 feature (Great scanner by the way). Before you turn it on press and hold the WX and L/O keys. Turn it on and it shows the voltage left in the battery. When you are in this mode pressing the number keys brings up numbers you can adjust. Press the DC/Bank button does things too. If anyone knows what this is please Email me at afowler@juno.com. I tried Uniden customer support. It is always busy.

With the SportCat 150 the battery icon appears after holding the L\O and WX keys and turning the scanner on. If I remember correctly, if the scanner is plugged in it should read 1.72. If you do not have it plugged in it should read 1.66 if it is fully charged. If your scanner reads 1.45 or lower, your battery is running extremely low and needs recharging.

Power on with...
WX and L/O -View voltage left in battery.
2, 9, MAN -Clears all memories.
2, 9, L/O -Illumination Diagnostic.
2, 9, PRI - Puts test freq. in channels 1-21.
2, 9, SCAN - Puts in more test freq.

I think that this is not the end. The WX and L/O feature has more options that could be useful. Let's all get our heads together and find some more tests modes.

Subj.: Emergency battery mod
Date: 20 May 1997 07:48:58 EDT

I've found a way to power the Sportcat (SC) with a standard nine-volt alkaline battery. The hardest part is finding a plug similar to the battery plug. I took one from an old cordless phone battery. I had to do a little trimming but it fits great. Parts needed: 1- plug to fit battery input in Sportcat with leads, 1-9 v battery connector with leads and 1-7805 5 volt regulator. Connect the black lead from the SC battery plug to the black lead of the 9v battery connector then solder them to the center (ground) leg of the 7805 regulator. Solder the 9v connectors red lead to the input leg of the 7805. Solder the red lead of SC battery plug to the output leg of the 7805. I used hot melt glue to insulate the solder connections. Plug the new adapter into the SC battery connector

and plug the other end to a 9v battery and you're ready to roll. I don't know how long it lasts but, when you're on the road its easy to find another 9v at any mini mart. Ira

As a community service from your local radio amateur:

AM is the acronym for amplitude modulation. For voice transmissions, the radio frequency (RF) carrier wave is modulated with the audio frequency wave form. This is one of the oldest, and most direct ways to get your voice from here to there.

Modulating the carrier means to mix the audio signal with the RF carrier. Mixing two waveforms produces two additional frequencies: one each at the sum and difference of the two waveforms. The carrier is not actually changed by mixing. Thus, mixing a 1 kHz audio signal with a 1 MHz carrier generates two additional signals: the upper sideband at 1.001 MHz, and the lower sideband at 0.999 MHz. Both sidebands carry the same information. The carrier, being unchanged, contains no information. SSB transmitters filter out the redundant sideband and carrier, and passes only one sideband to the RF power amplifier. This has two very desirable effects on the transmitted waveform. First, it is much narrower, and makes better use of the available RF bandwidth. Second, because it is narrower, the same input power to the amplifier results in a stronger output signal.

Reception is made a little more complicated by removing some of the information. Normally, simply filtering and rectifying an AM transmission is enough to recover the audio waveform. An SSB receiver injects a pseudo-carrier, from the BFO, into the signal. Again, sum and difference frequencies are generated by mixing the two signals. By carefully choosing the BFO frequency, the difference signal approximates the original transmitted audio signal.

CW is an unmodulated carrier, pulsed on and off by Morse code keying. Thus, the transmitted waveform is a pure tone, in theory requiring only the narrowest of RF bandwidth. The sharp rise and fall times from keying generates harmonics, but these are more or less easily filtered out. On the receiving end, the pulsed signal is mixed with a pseudo-carrier, again from the BFO. The resulting difference waveform is what you hear as Morse code on the radio.

I hope this helps. It doesn't directly answer the original question about scanning, but perhaps there is enough information here to reasonably infer what you need to know.

Michael.

Hi, I have a radio shack scanner, bought it from ebay. Its max frequency is 512mhz. The problem is that it cannot recieve nay fun stuff, like police and fire, actually it only recieves like tow trucks and some times utility workers. WHy doesn't it? is it because police and fire have changed their frequencies or something? Can someone tell me a place to find frequencies for Houston and College Station.

I simply forgot - nothing was coming over the scanner when I shut down the computer for the evening, so it was left on, not a usual occurance.

I remembered this morning what I'd done, but there were no lights, no scan. no sound, nothing. I've checked the plug, cord, switches, everything, but the little bugger is deader than the perverbial doornail. What have I done? How can I achieve salvation from what appears to be a flat case of murder of the 210XLT. Help would be appreciated as someone's got to watch our local sheriff!

From: John Coan <jcoan@alumni.duke.edu>
Message-ID: <37603886.9B481F0D@alumni.duke.edu>
Source record: 115690

I am looking for opinions of the only scanner beam antenna I've seen advertised, the one from Grove. It appears to be a log periodic design. I am looking for something with decent gain and wide coverage for public service frequencies. What about this one, what is the competition?

I plan on using a TV mounting kit to attach at the corner of the chimney -- probably something from the Shack. Any opinions on these? In general, how tall a mast (above chimney top) should I be looking for?

What about signal amplifiers on the antenna? Are such animals made which are broad banded enough to work? Also, I would like to be able to transmit on my beam on 2 meters and 440 MHz. Any signal amplifiers have bypass capability so that a five watt signal won't fry them?

And, rotators.... I assume something from Radio Shack made for TV antennas should do the trick?

For feedline, I am probably looking at Belden 8877 over RG-8. Opinions? Do these beam antennas come with SO 239 connectors? How, in general, are the connectors shielded from moisture?

If anybody wishes to offer an opinion I would be happy to hear it. Or, if you can point me to a web site with the needed information that would be great.

You don't want the serial number, you want the model number and it is under the battery on that radio. Depending on the usage, you can have a stubby antenna on either VHF or UHF. I use both a VHF and UHF MT-1000 and both have almost identical stubby antennas on them.

It's the only airport they show for Watertown, so if this is where your
airshow will be, you'll hear alot of action on the frequencies listed here.

Hmm.... sounds interesting!

As I've said before, there certainly is a market for it. I'm almost certain that there are companies out there secretly working diligently to be the first to market a digital APCO 25 compliant scanner.

The problem is that the industry is so hush-hush about anything new. No one wants to let the others know what they're working on. The result is rumors and speculation on our part, some true some not. But this document tells me that it's indeed happening, or is expected to happen soon.

Many phones can be put in a test mode. This may not work on all, but it worked on both of mine.

Disconnect the battery, press and hold the # and * buttons as you reconnect the battery. If it works on yours, you should be able to step through the channels by hitting the "channel" button.

If any are being planned, the makers are keeping it quiet. The Canadian
government intends to require a permit for any individual who wishes to
possess or operate a digital radio receiver. Details are on my website
(which also has the text of RSS135 in HTML format).

http://nf2g.com/scannist/canada_index.html click on Laws & Regs

>I have attached the full text of the article. (saved in .pdf format)

Shouldn't do that here. This is not a "binaries" group.

Yes!!!

Nuclear X-rays and Prompt Gamma pulses create a very broadband Electromagnetic Pulse (EMP) that easily exceeds 50,000 volts per meter (50,000 times 80meters/2 (half wave) equals 4,000,000 million volts across your 80 meter dipole). By the way, that is 42 billion watts in 377 ohm atmosphere across your antenna!!!!

During the 50's when Above Ground Nuclear testing was being performed, the STARFISH event, 700 miles from Hawaii, turned off the power grid in Hawaii. That was in the days of Vacuum Tubes...what happens today in the solid state world?

Extensive studies and tests have been performed in this area...nuclear weapons x-ray and gamma radiation will kill your radio and most everything else.

Who knows, I might have liked it too, if it hadn't been shoved down my throat. I had such a bad taste in my mouth from having to learn it for no good or logical reason, that I never used it on the air and now don't even remember anything other than SOS.

Kind of like how something as enjoyable as sex can be disliked and even hated when you are raped and it is forced opon you.

4411. Help with new Trunk Tracker.

Newsgroup: rec.radio.scanner
Date: 1999-06-10 00:00:00 UTC
From: Ruff-Cut <sharkman@execpc.com>
Message-ID: <7jpvcl$5r6@newsops.execpc.com>
Source record: 115704

I just purchased a new Trunk Tracker from Uniden. I acquired the local police frequencies that operate on the new system. So far I have received only one weak signal. The standard frequencies (460MHz) come through rather well. The department is about 15-20 miles away. Shouldn't the 800MHz signal be stronger than the older frequencies? The system used is a standard Motorola(not type II). The scanner claims to use the type II setting as a default. Do I have to adjust my scanner to receive standard Trunked Systems? The manual is a little confusing.

The other thing I wondered was why my three year old Uniden SportCat could receive some cell phones(it was cell-blocked) and this new scanner receives none. They both cover the same frequencies.

If any of you have some suggestions,it would be greatly appreciated.

Ruff-Cut

I don't have a BC210XLT schematic.
Many scanners are protected from reverse polarity by an internal diode
shunted from the +12 vdc to ground.

That diode may now be a short circuit (crispy critter) in your
scanner.

Hello there
I have a question about transceiver i pickup from action
It's a GENERAL ELECTRIC transceiver the fire dep. in MINNESOTA use
before going to a different system
It's a General Electric model MASTR II,10 channel transceiver operate on
155.00mhz to 155.900mhz.I have the all system ,the unit the cables the
connectors the speaker the all works and i can connect it to a 12V and
use it
My question is ,can i use the output amplifier to boost up my handheld
transceiver ???
and if i do what modification i have to do???,and can anyone have
schematics for it ??
Is this system have good preamplifier to use for my scanners
For the output amplifier they use 4 2N6082 transistor ,and i don't
know the output power is?.For the channels the use little modules look's
like a mach box 10 of them ,one for each channel,and each one of them
have different freq.
Can i use this unit for my hobby after i modify????
thanks a lot in advance
LaLaS

Model: 2995A, AM/FM and 4 channel scanner from 150 to 174 Mhz. An older 70's type where you analog dial in the freq for each channel, click it in for each channel and then listen to the radio or the 4 channels scanning. Good shape and it is portable but not that small. You would take this on a picnic or to a gathering but would not want to tote it around if you were hiking. Will send .jpg's at your request. $30 shipped to your door.
Contact: BHL, philoxeny@hotmail.com

Just use one depending on which decoder you want to build. By the way,
I built the 2 level decoder using the 0.1uF capacitor and built the
Bill Cheek 4 level decoder using the 2.2uF. I found that they both
work well on my Pro 2006.

At VHF and UHF this is particularly true. Baluns are mostly used for
HF transmitting applications.

>A mismatch effects BOTH receive, AND transmit. But the mismatch between 50 and
>75 ohms, like you said, won't matter much.

That's a 2:1 SWR, a return loss of roughly 10 dB. Under a worst case,
assuming all reflected power is lost, this would reduce your signal
power by roughly one tenth or 0.1 dB. This is not enough power to
make a difference unless you were transmitting and didn't want to deal
with the heat created by 1/10 of the transmitted power.

>The idea is, that it causes STANDING
>WAVES, both on transmit, AND receive, but the benefits of using VERY LOW LOSS
>coax, (like RG-11/U), outweight the effects of the mismatch...This is
>especially true if it is the type with the FOIL COVERING, along with the wire
>braid...This is the type cable operators use...Joey

Standing waves are irrelevant for an application such as this. This
is all about loss. They only matter to the extent that SWR problems
result in a loss of receiver energy. In the vast majority of cases, a
mismatch won't create a noticeable loss in received signal strength.

Steve,
An owner's manual for your BC800XLT (great scanner, by the way, except for its susceptibility to strong signal overload) may be available at the Online Store at http://www.uniden.com. Although the BC800XLT has been out of production for a few years, you may still be able to order a copy of the owner's manual. Just be sure to enter the model number of the scanner in the "comments" section of the Uniden web site order form.

73,
David

I'm in need of some help with an old Bearcat 210 XLT Scanner (Radio), it was in
excellent condition. The operative word is WAS, a friend had borrowed it and hooked it
up with reverse voltage. Using d.c. in he had the positive and negative reversed, he said it
just when pop then nothing. Any suggestions ??? I have looked but can find no obvious
fuses or burnt out components. Is their a way to bring this little old scanner back to life.

Any help would be appreciated,

Thanks,

Henry

4447. HELP need info on rovering in VHF Contest from CA

Newsgroup: rec.radio.scanner
Date: 1999-06-10 00:00:00 UTC
From: mikrounit@hughes.net
Message-ID: <375ff4ea.1604807@news.hughes.net>
Source record: 115815

Hello,

This is Mike, KQ6MU.
My plans have changed for the contest.
I was going to go up with a friend on a mountaintop, but
now I may be going ROVER in California.
I would like to get some pointers and hints on where to set up
my antennas for the following grids:

DM03, DM13, DM23, DM24, DM25, DM05, & DM15.

These are the order of which that I will be traveling through these
girds for this weekend's VHF QSO Party!!!
Maybe someone out there could give me good places, such
as a park or an empty lot\field, to set up my radios and antennas.
Please tell me what city to go in.
I don't think that we will be able to go on mountain peaks, but ridges
are ok too. 2 reasons: too much time to get to a mountaintop, plus
a Ford Escort is the vehicle that I will be in.

If you can help me, please E-mail me:

mikrounit@hughes.net

I would greatly appreciate it!!!
Thanks & 73,

Mike Green KQ6MU

Some time ago, I recall reading about programmable scanners for computers. It was software driven to select frequencies and (despite the debate regarding this) it had the capability to monitor a frequency and capture/record what is heard for review later. It was able to monitor multiple frequencies and kept each WAV file associated with the channel it was heard on. Are these still available on the market?

>
> Jeff KH6O

...and these "small lakes" are the least utilized, with vast empty spaces, even on 70 CM. And in demand commercially. Hence, the most vulnerable to being lost.
The HF ham bands are heavily utilized on a world-wide simultaneous-use basis, and provide for non-channelized, unlimited time one-on-one QSO's without using a shared infrastructure like repeaters, and using a small fraction of the bandwidth. They are also the least sought after for commercial use, hence we have actually gained more bands over the years (12, 17, 30 meters).
It is understandable then that many of us consider HF operation an essential (for some of us the only desirable) ham radio spectrum in which to operate.

Try these:
Wal-Mart - 151.6250 467.7625
467.7500 467.7750
467.8000 467.8250
467.8500 467.8750
467.9000

Got the above info at: http://www.webzone.net/dshuffy/wscompanies.htm so
credit is given where due. ;-)

Also try 154.5700 and 154.6000 (My own personal finds here in Phoenix)

I would have to say, without hesitation, the Optocom by Optoelectronics. This of course assumes that you have a computer and don't have a problem with using it as a computer controlled unit. It has superior sensitivity, intermod rejection, build quality and last but not least the greatest amount of upgradability so you won't be buying an obsolete unit. Optoelectronics has already added a "bitbanger" circuit for better Windows software compatibility and EDACS use. It scan speed is REAL FAST and not just fast but accurate. Also soon they will have a internal plug in "frequency counter" for it as well. I have had nearly all that is out there over the last several years and this unit is TOPS!

>
>You don't have a clue about what spread spectrum is based on your reply.

Really...

>It has NOTHING to do with frequency hopping (which is not secure at all).

As used in many military and civilian high-security comm systems it is
one of the most secure transmission methods around, especially with
proprietary, often changed hopping sequences.

>There is no such thing as "direct sequence" spread spectrum.

Go tell that to Aironet and Lucent, they seem to need Your infinite
wisdom since their products obviously exist!

From http://www.wavelan.com/about/wavelan.html

"WaveLAN wireless communication is based on a radio transmission
method called Direct Sequence Spread Spectrum (DSSS) Radio Frequency
(RF) technology. WaveLAN products are developed in accordance with US,
European and Japanese regulations for radio transmission, using the
915 MHz and 2.4 GHz frequency band for Wide Band Data Systems. "

I suggest You read up a bit, for example the 802.11 Wlan standard. It
defines two substandards, DSSS Direct Sequence Spread Spectrum and
Frequency Hopping Spread Spectrum.

>In a nutshell, spread spectrum works by taking the audio to be transmitted and
>breaks it up over the "spectrum" and transmits each portion over a different
>frequency simultaneously. Most spread spectrum phones are transmitting on 25
>different freqs AT THE SAME TIME. Nothing like a 25 channel phone that only
>uses 1 at a time.

From a digital phone, You havn't got any audio to transmit, just a
stream of digital data. How do You get that data across a wide
frequency band? Go look it up.

I'm not positively saying that this phone uses the excact same
modulation as defined as direct sequence, but the ttechnology is
similar, and its definitely not "100% secure"

So, i stand by my original statement:

>>So, with the right hardware, it's probably not that hard.
>>There's probably no encryption in the system, just a (for now)
>>unusual modulation.

/Marcus

Our local Wal-Mart Super Center uses a frequency not listed on the
national list. Our local is 151.995 MHz so if you have a scanner that
can search for active frequencies you might check out all the business
bands just in case!

Message-ID: <7jpf8p$d9d$1@bgtnsc01.worldnet.att.net>
Source record: 115837

PROgramit is an inexpensive computer interface that is compatible with almost any scanner. My WEB pages at http://www.qsl.net/ka2pyj describe how to build and install one for yourself. The project has been active for over three years now, and although over 300 people have built PROgramit and a few new ones are built each week, I suspect there are people who have visited the site and decided that they were not capable of building and/or installing the interface on their own.

In order to determine the interest level, I am offering assembled and tested boards to anyone who orders between now and July 15th, 1999. Pricing is:

$59.95 for the parallel version assembled and tested
$69.95 for the serial version assembled and tested.

Price includes SW and shipping.

Contact me at jrmont1@worldnet.att.net for further details.

If installation is your problem, let's discuss.

John M.
KA2PYJ

I recently visited the palm beach/miami Fl area on vacation. While there I toted along my Pro-90 for trunk tracking. I was able to track most of the dept in which I programmed, however I have one question regarding the Miami system. Knowing that this system was a type 1 system, I took the advice of the freq list that I had with me and programmed the fleetmap to 14 and 6 i believe it was (i don't have my notes with me right now). Anyhow, I entered the fleet map as the freq list indicated and I was able to program police and fire Trunk ID until I got to the 100-11 for the pd.. Each time I entered anything about 100-11 such as 11, 12 etc.. it would enter 000-1 instead. I was not able to monitor anything above the 100-11 on the pd subfleet. all of the 000-x and 400-x (i think it was 400 or 300 for the FD) without a problem. However I could not get anything to program above 100-11.. Can someone that is familiar with the system tell me what I was doing wrong... I will be heading back there in about 6 months and would like to have it figured out by then.

Please reply via private email since I do not usually read the newgroups. Thanks, Dave. private email n6rhl@mho.net

Thanks...

Dave...

I know they are still on lowband, but slated for upgrade when the
State Troopers get their new digital system. That of course, may
be a number of years, they are just now stumping for the bond
issue.

The Warden and tac team of each facility also has radios on the local
Law enforcement channels, the Motorola M1225 being the radio of
choice. In addition to that, they have 800 Mhz capability on the
state troopers trunking system.

Very nice desciption Micheal. On addition that I could make that really clouds the waters but is wuite true. Most CBer think that SSB is a another form of modulation. It is not. It is AM or amplitude modulation. The rest of your post very concisely describes how the transmitter removes the carrier and unwanted sideband.

regards
James

On Wed, 9 Jun 1999 13:07:52 -0500, "Michael Young" <nobody@all.org> wrote:

*As a community service from your local radio amateur:
*
*AM is the acronym for amplitude modulation. For voice transmissions, the
*radio frequency (RF) carrier wave is modulated with the audio frequency
*wave form. This is one of the oldest, and most direct ways to get your
*voice from here to there.
*
*Modulating the carrier means to mix the audio signal with the RF
*carrier. Mixing two waveforms produces two additional frequencies: one
*each at the sum and difference of the two waveforms. The carrier is not
*actually changed by mixing. Thus, mixing a 1 kHz audio signal with a 1
*MHz carrier generates two additional signals: the upper sideband at
*1.001 MHz, and the lower sideband at 0.999 MHz. Both sidebands carry the
*same information. The carrier, being unchanged, contains no information.
*SSB transmitters filter out the redundant sideband and carrier, and
*passes only one sideband to the RF power amplifier. This has two very
*desirable effects on the transmitted waveform. First, it is much
*narrower, and makes better use of the available RF bandwidth. Second,
*because it is narrower, the same input power to the amplifier results in
*a stronger output signal.
*
*Reception is made a little more complicated by removing some of the
*information. Normally, simply filtering and rectifying an AM
*transmission is enough to recover the audio waveform. An SSB receiver
*injects a pseudo-carrier, from the BFO, into the signal. Again, sum and
*difference frequencies are generated by mixing the two signals. By
*carefully choosing the BFO frequency, the difference signal approximates
*the original transmitted audio signal.
*
*CW is an unmodulated carrier, pulsed on and off by Morse code keying.
*Thus, the transmitted waveform is a pure tone, in theory requiring only
*the narrowest of RF bandwidth. The sharp rise and fall times from keying

*generates harmonics, but these are more or less easily filtered out. On
*the receiving end, the pulsed signal is mixed with a pseudo-carrier,
*again from the BFO. The resulting difference waveform is what you hear
*as Morse code on the radio.
*
*I hope this helps. It doesn't directly answer the original question
*about scanning, but perhaps there is enough information here to
*reasonably infer what you need to know.
*
*Michael.

The one that covers your region's frequencies you want to hear.

Seriously. What are your requirements? Do a little homework, and see what frequencies are being used by the folks/departments/agencies YOU want to monitor.

THEN start looking for scanners!

Do you think the "Icom PCR-1000" would be a suitable substitute? You don't get 1300-2000Mhz or the scope but you do save
$6,000.00 US. This is assuming you have a quick computer to run the scanner....

Check out this link:

http://www.strongsignals.net/htm/new_user.htm

What works for you may not work for me. Do you have
an EDACS or Motorola Trunked system in your area? Do
you listen to military aircraft? Do you want computer
controlled? This question is impossible to answer, except
to say you need to be more specific about your ideal radio's
requirements before a specific model can be mentioned.

Another thing to keep in mind is no one scanner can do
everything well. Always a compromise. That's why many
of us have multiple scanners. The link above is very
informative. I've learned a lot from Rich.

Source record: 115655

Oddly enough, my DJX10T received all of the 800 band right out of the box. Unfortunately, as I was messing with it and getting the computer link set up, I reset the radio and bye-bye full 800 mhz coverage. This leads me to suspect that there is some way that it could be restored.

However, these units do receive cell images very well in the upper 1400 mhz range. So it is not an issue with me on my unit.

4506. Watson Super Gainer Antenna in Diamond disguise

Newsgroup: rec.radio.scanner
Date: 1999-06-11 00:00:00 UTC
From: digirato@att.net
Message-ID: <37696463.17643240@netnews.worldnet.att.net>
Source record: 115717

I ordered a Watson Super Gainer from CCrane and received an antenna marked RH771 on the package and on the antenna. Isn't that a Diamond designation? Do they make them for Watson?

After researching slowly and carefully, reading Rich Wells' and Lee Rothman's recommendations, I finally decided to get a Watson. It fits the description and seems to work very well on my Yupi M3.3.

Did I get what I should have?

Thanks guys,
Digirato

Sorry for answering my own message, but see the response I got from C.Crane below. I already responded to them stating that suprise substitutions are not at all ok with me.

Is the Watson Super Gainer really unavailable? Is the Diamond RH-771 really equivalent to it? (the packing label and antenna are both marked RH771). I guess it's possible but wonder what you guys think.

****
Thank you for your reply regarding your order number XXXXXX.

The Watson Super Gainer is no longer available. We are currently, substituting the Watson with our CCSuper gainer scanner antenna. The manufacturers packing labels are incorrect, but the product is of the same quality. The antennas are manufactured specifically for B. Crane [sic] Company, Inc.

If you have any further questions, please feel free to ... yada, yada yada

Sincere thanks,

XXXX
B. Crane [sic] Company, Inc.

The manual is confusing. I recently purchased the BC895xlt. You need to program the fleet map into the scanner. Otherwise it defaults to a Type II Motorola system. There are a whole bunch of fleet maps listed in the back of the manual. You will need to find out what map the Dept. you wish to listen to uses.

Hi all!
I'm looking for frequecies for Madison County Illonios area.
Police , fire , EMS, etc.
Thanks for any help!

Lee Rothman wrote:
> I would have to say, without hesitation, the Optocom by Optoelectronics.

While the OC is a great receiver, I don't think I could personally recommend one for what appears to be a first time buyer. I also have a problem with doing so because of the $500 price tag (even though the original appender stipulated 'price not a factor', most new users I talk with seem to think you can get a top-of-the-line unit for $200-$250).

For these reasons, I would recommend a more 'traditional' scanner. Such a unit will be easier to operate, not require a computer to use, not involve as much expense and still expose them to a broad experience of what the hobby is about.

Once they have played with this one a bit, decide they like the hobby and want to invest more, know more about scanning, scanners and features, I wouldn't have a problem recommending the OptoCom for those "power users" who want the best bang for the buck that they can get!

the 75 meter band already sounds like that, and thanks to "k4zdh it has
cleaned up a little, but the 2 meter band also sounds like that because
of all the truckers on there.

Radio Shack also carries RG-6 which is typically used for cable
TV. This will work just fine for you, is cheap and low loss. You'll
probably just need to buy some F-type to BNC or PL-259 adapters.

RS typically offers it in boxed 25 & 50 foot lengths in both white
and black jackets (last I knew).

For any more info on co-ax see my Co-ax page:

http://www.strongsignals.net/htm/co-ax.htm

Good luck!

It came to me in a "voice" that
the idiot was in need of
spiritual help and we, his
favorite NG, could be of
major help to him in his need
for our prayers and offerings
of condolence and eternal
pity.

it's not personal info...it's
as he would have wanted it had
he survived ....just info to
send condolences to whoever now
reads his email.

it's an FYI...

That's Multnomah County Community
and Family Services...Information Dept.
His desk phone: 503-306=5875 ext 27298
john mackey@co.multnomah.or.us

h/w:multnomah.lib.or.us

Lolenzo T Poe his supervisor to express
condolences to and sorry to see him go.
503=248=3691
Lolenzo.t.poe@co.multnomah.or.us

Now we owe him our prayers and hope
he will be met with kindness to the
place he will go when he gets there
after the funeral is held.

It's the least we can do. He's given so much
of himself to this Ng that not to will
be a crime against humanity. I think
we are above that.

Just an FYI, public need to know kind
of post. Public information.

I can't believe that a reputable company would play that game. NO NO NO, a Diamond IS NOT a Watson. You need to return it and get a hold of Glenn at Scanners Unlimited (one of the only U.S. dealers for Watson) and order it from him. Forget the Diamond. I tried one and the Watson blew it away with all due respect. The Diamond isn't a bad antenna, in fact one of the better ones. Just not up to the Watson. Check it out. His number is (650) 573-1624

In My opinion the Radio Shack PRO-2050 800MHz Trunktracker is one of the best as it has three hundred cannels...triple conversion... is a trunktracker... and operates as a mobile with adapter. It scans at 50 ch per sec. Searches at up to 300 steps a sec. Its range is 29-54 MHz, 108-174 MHz, 406-512 MHz,and of course..... 806-956 MHz. Plus it has an okay service search.....not as good a service search as Uniden BC -700A, But still a good one.

Just went there last night, and I noticed that they were using Kenwood
FRS radios on channel 14 (467.7125 MHz). They used to use Motorola
business-band handhelds on 151.625 or 154.570.

```

Yes...here's another...No, also there is Maybe, Somewhat, Ouch! and my favorite...What!
The USAF, Army, Navy, Marines, CIA, et al...incl.. Air Force One all have jamming equipment which pretty much does what you are looking for.
Collins Radio makes the wonderful stuff, possibly on the surplus market one day.

Don't be too sure about that. I have a Diamond RH77CA and a Watson W-881 (Super Gainer) and they are virtually identical in construction, fit, finish--in fact in every way except the Watson is about 1/4 inch longer, certainly not enough to make the difference that you claim. I haven't investigated it but I will go out on a limb and say they two are so close (even in packaging) they were made by the same company or by a company under license to make the near-identical thing.

>_____________________________
That's what accident reports are for.
They provide an objective, unexcited analysis of what went wrong and why.
No media or scanner report can be relied upon to tell you what went wrong,
they just provide the excitement of the moment.

I use a the VHF output section from a Motorola VHF {150-174} radio as a
"linear" for my 2Mtr HT {Icom IC-2AT and a Tempo S1}. The TR (Transmit-
Receive} relay was a little wierd. If you have a ham radio, and if you
have the manuals for the GE equipment, you should be able to find the input
to the output stage. In my Motorola gear it is a RCA female connector and
the rest of the radio drives this point with 2 to 3 watts. My 1.5W macthces
nicely. GE may well require less or more power. Less power(more sensitive)
will require a resistive pad to reduce the output of your radio. More would
require another stage of amplification and while "do-able" most likely
willnot be worth the time and energy.
Most modern solidstate RF PA(power amplifiers) are by nature rather broad
banded and a 155 to 160 amp should cover down to 144. But no guarenty.
You might be better off to sell the GE gear and buy something more readily
used in your hobby.
This all presumes that you are a HAM and the the "transciever" in question
is a 144-148 ham rig. If you have a FRS or a "cb" then you have a nice door
stop. I quess you could also use it with one of the itenerite HTs that
a lot of building suplly/sams club/ ect sell. OF course it would be illegal
and you could get fined big time.

Good luck.

I would think that the BC895 would be an even better choice, because you get
all of the above (except service search) plus CTCSS decoding, CTCSS search,
and PC control (which when properly manipulated, gives you a very nice
"service search", among many other things like alpha tagging, unattended
logging of search hits, the ability to alternate between trunked and
conventional mode automatically, etc.). I mean, what fun is it to punch in
300 channels and up to 500 talkgroups by hand?? Yuck...

Only the J, K and E versions are unblocked, the T version is firmware blocked, only a CPU change will enable the full 800 band. Try for images though, you should be able to find them somewhere at 2 x second IF up from 869 or down from 869.

Bill Conduit -

What a FOOL you are!

Now you are posting my father's work information to some how put a
squeeze
on me!!!!!!!!

HAHAHAHA

Ask Blake how long after he made a prank call to my Dad's office it took

for them to track it down to BLAKE'S PERSONAL HOME TELEPHONE!!!!

You are SOOO foolish it is pathetic!

It's a shame too, because it was really starting to work, John. You went from 30 lame off topic posts a day to less than 5. Only two people decided to not join in the ban and reply to you. It was beautiful.

Then Bill flung the proverbial barn door wide open again, for reasons that I am not yet certain. Perplexing, but then Bill makes a point of making himself somewhat of a mystery here.

I don't understand it either, but nonetheless, Bill's point is valid and (now) proven: If you are ignored, you shut up. Period. You rely on us to provide a purpose for your idiot existance.

Tell us how you've never told a lie on this NG, John. Tell us all again for the fifteen-thousandth time. Do you really think that just because you say it over and over it becomes the truth? Here's a reality check, John "If I say it, it is truth" Mackey:

Lie #1:
I have NEVER said I "have 5 FCC licenses".

John's License Post: 4/22/99

> Thirdly, you claim to have more FCC licenses than you can count one
> one hand. Please list those.

Gladely Blake, they are a matter of public record!I have had my Amateur Radio Novice license (1983), my Amateur Radio Technician license (1984), my Amateur Radio General License (1990), my Amateur Radio Advanced license (1990), and my Amateur radio Extra class license (1993). All these in addition to my General Radiotelephone License.

Lie #2:
If I am obsesed with that person, when why is it that
everyone else is always wanting to talk about him??

When was the last time you saw ME initiate any discussion about him?

John's initiation of a Bill Cheek thread:

Subject: How to contact Bill Cheek??
Date: 1999/04/04
Author: jmackey <jmackey@usa.net>

Posting History

Does anyone know what jail or prison Bill was taken to upon his arrest by the
federal investigators so we may send him cards & letters? This way, he will
know we are all thinking of him!

Lie #3:
I do NOT "post OVER 350 offtopic posts a month" as you claim.

Dejanews search from 1/1/99 to present:

Messages 1-100 of about 2200 matches

2200 divided by 6 months = 366 messages per month. Do the math.

Lie #4:
> That's the wrong John Mackey. This one's only claim to fame is being the
top
> off-topic poster on usenet with thousands of off-topic messages across

Oh no, I could NEVER try to hold that title. Bill Cheek won that title
severaltimes over according to information POSTED by YOU. Remember the
"reality
check"
post where YOUR OWN DATA showed that Cheek posted several hundred more posts
on
usenet than me!?!?!?!?!

Below is an abbreviated qoute:

Date | Mackey | Cheek |

TOTALS | 2139 | 2348 |

Current Totals for Cheek and Mackey 1999:

Mackey: About 2200 listed this year
Cheek: About 1303 listed this year

Estimated on topic content
Cheek: 60%
Mackey: 0.99%

Does this look familiar? Now you know who it came from. Took me a whole 10
minutes of my time to gather this information and pass it on to Blake.
You've been had, Johnnie. The gig is up.

Now that you have been proven beyond a doubt to be a liar, maybe now you'll
have the sense to shut your yammering yap and hang your head in eternal
shame, but I seriously doubt it. And to me, it really doesn't matter,
because I am perfectly happy to ignore you, as I have been doing just fine
with the exception of this post.

Have a nice day John. And since you're so concerned with usenet bandwith (yeah RIGHT!) you need not reply to this post, as I will never again read anything with your name on it. And I heartily encourage everyone to do the same. Enjoy the silence John, you've earned it.

-Phil

Really, you're all missing the point of my original post. What I meant was that my cordless phone is 100% secure as far as average scanner listeners are concerned. Anyone who really wants to and has the technology & know-how, can demodulate the digital signal from my phone. But as far as the average scanner user like you & me or Joe Blow down the street, we aren't going to be able to. In other words, this equipment isn't readily available on the consumer market as are scanners. I seriously doubt anyone in my neighborhood has the technical ability or equipment to listen in on my phone. It would be far easier to to a wire tap from the box on the corner. However, the 46 MHZ phones that are scrambled are a little more secure than normal cordless phones, but Ramsey sells a speech-inversion scrambler/descrambler which I believe will descramble these phones. So it would be easy to listen in to these, but digital/spread spectrum is another matter.

Tom

I need to know what scanner will trunk an ericison system. Where I used to live I could trunk with my PRO-91. I can not get it to trunk the erickson system here in Miami-Dade County, (not city of Miami).

If anyone knows of a way to do it with what I have, please let me know.

Thanks in advance.
Ted

C.B. Radio used to be the old 11 Meter Ham band in the Shortwave portion
of the Radio band but during the 60's this changed.

Ther is now a new sort of like C.B. band in the 467 Megacycle range.

It is called (F)amily (R)adio (S)ervice. This is the band that C.B.
Radio originally started out on but do to lack of range was not popular.

C.B. is an Amlitude Modulation Service, with Sideband availabl on better
models.

FRS is a Frequency Modulated service with no sideband. Range is usually
2 to 4 miles. Radios are much smaller and I have only seen handhelds,
no bases or moblies.

I have heard of 154.9350 being used in the Cleveland Area.
Some of the suburbs are using the 800 deal.
I wonder how a subub can commumicate with Cleveland now that the city is
all DIGITAL. They must have seperate LEERN radios, I guess.
Ohio is switching to something called M.A.R.C.S.. It is supposed to be
a Statewide 800 system. If digital or not I do not know

you are not wrong. Many federal agencies and local use frequecies in those areas because of the lack of people looking there. Just because it is not in thier usual band doen't mean it it not used. For example DEA uses 418 Mhz and around that area. But you can find them on many other bands like 40 Mhz, 163-174, and sometimes in very wierd bands like the new one alocated for public safety in the 700 Mhz band. Phil is incorrect.

Poor Ebay.com ......frustrations galour !
06/09/99 - 07:12:44 Ebay announces their new User Interface (UI) and system look. They put it on-line for all to enjoy with hopes of gaining more of the green stuff and higher stock prices.
06/09/99 - 18:24:02 Ebay announces their system is not working correctly. The next 61 system messages explain what they are doing to get ebay.com back on-line. Hard crash... I bet there are many very frustrated customers. Do I hear the sound of stocks falling ?
06/11/99 - 17:37:01 A letter is posted from the Ebay big wigs spilling their emotions to their customers... please love us !!!!!!!!
Next are 11 more system messages...... until .....
06/12/99 - 05:16:38 Ebay announces they are backing out the new UI, but want to make sure you, the customer, understand it was not that new UI that brought the system crashing down ...... ya right .... Ebay, ever hear of testing and quality control ? WOW over 3 days of no ebay ..... how can life go on ?
Now I guess they (Ebay.com) feel a bit of the frustration as did/do the scanner owners who have had their scanner sales pulled from ebay for bogus reasons or so I have read on this newsgroup.
If you want to read the numerous system messages Ebay.com has placed for all to view about the past few days of frustration go to the below URL:

Yes, what you are inquiring about is possible. WinRadio makes a scanner
that installs in your computer. All controls are on screen. Many functions
are available by using optional software packages. Check out the web site
at http://www.winradio.com.

I have one of the R75's from Grove (004). I only have it hooked to a Sony AN-1 at the time but it seems to be a very good radio. It is taking a bit to get used to the menu but that is because I am used to a R7A. I do not have any of the extra filters or DSP unit yet so I do not know how they work. I will say that it is a keeper. The two weeks that I have had it have been very good. I plan on a more detailed review at sometime in the near future but have not had time.

ShortWave Magazine just released the second review by John Wilson (designer of the Lowe 150 and 225) and he is very impressed with the radio. The second review, which came out about a week ago had very good things to say.

More to follow.

I got one too.
I also have the DSP and a 3.3 kHz filter.
It is a very good radio compared to my old Icom R72.
Better audio than R72.
It has been tested in Sweden by a Dx-er and he says the same too, it is a very good buy.
The DSP works very good, The auto-notch really eats the tones. THe Noice reduction works well too.
The 2-stage preamp works om Mediumwave too.

Actually such equipment exists and is available and it's not illegal. The primary users of such equipment are those business that have a need to test consumer electronic equipment, medical electronic equipment, military electronic equipment...etc. for ElectroMagnetic Compatibility and ElectroMagnetic Interference or as we know it EMC/EMI. The transmitter and receivers used to do the measurements generally operate from 14khz to 40ghz and are continuously tunable and can generate a fieldstrength of 200v/m. Go down to the local library and check out these two magazines: Evaluation Engineering and Compliance Engineering. Both have articals and advertisements citing the equipment you are looking for...Price and availablity of the equipment will be up to the individual manufacturers.
.................enjoy.................

Take the radio to an authorized Motorola Dealer. They will programm the radio for a nominla fee. Unless you plan on spending several weeks signing software contracts and countelss amount of money to obtain the RSS software, cables, and RIB it just isn't worth it. Buy a scanner ti scan...and a transciever to talk. Motorola has done a great job in keeping it's software out of the general public's hands.

So far I am not aware of either a Tetra decoder or anyone working on
one yet. It is a fully digital system using 25khz channels.

Dolphin is a trade name of the operator, ultimately owned by a
canadian telecoms/cable co..... TIW??? something like that.

Why not get a frequency counter? If you use one of those, it doesn't matter
what the antenna looks like on the radio. Also, I guess you have checked
FCC listings for the entity you wish to monitor.

Just fix it yourself. I broke mine off my BC205XLT, and while it was a huge pain unsoldering the metal covers and stuff off of it, it wasn't too hard to repair.

And if you have no tools at all for repairing it, you can get everything you need at Radio Shack for less than $15.

Hello Sean; I bought a BC-235XLT via the "remanufactured" route from Uniden and I have absolutely no complaints. The radio arrived packaged just like they look in the store and other than a small decal on the back, it was impossible to tell that it had been in and out of the factory twice. Delivery was very prompt and when I had a question regarding programming, they readily responded. I think you would be pleased with their service. 73's Bob, W6JRF

Thanks for the info. I broke down and bought one yesterday. Two things
so far bother me a little bit:

1) It would appear that the synchronous detector only works on AM? The
manual is not all that great (or, I'm just not very experienced with
SW radios...).

2) Also, it appears that the "scan" function can't be made to work
like a standard scanner. There is no mode (at least from what I can
tell reading the manual, I haven't played with it on the radio yet)
where it will stay on a frequency until the transmission is complete.
The manual says it will move off the transmission in 10 seconds
regardless of whether someone is still talking or not.

Can anyone confirm or deny these two issues? Any other features that
seem unusual to you?

Thanks in advance,
Jeff Adams

Thank you very much for your posts. Sounds like I ought to get the DSP
unit (which is what you said in your first post :-)). Can you comment
on my questions in my other post in this thread (regarding the sync
detector and scanning)?

Thanks very much,

You can expect like new performance from the reconditioned radios. One note on the pricing however. If they are offering you 60% of SUGGESTED retail it may not be as great a deal as you think. For example, if a given dealer (ScannerWorld, Grove, etc) offers the same product NEW for say 35% off SUGGESTED retail, your actual savings on buying reconditioned is 25%. Now, 25% is still a significant savings, but not quite as head turning as the 60% you mentioned initially. The radios (new or reconditioned) will work equally well, but with the new you will likely get a longer warranty. Whether this is worth the difference in price is your call. Hope that helps.

No John, you are lying again. You asked me if I had another person in
my house, and I replied only my son...

You are a filthy liar John, and you know it. It still seems strange
that your fathers voice and yours, are identical. From a 30 something
punk, to a retired military officer in his 70's, you would certainly
expect the voices to be at least a little different, not exaclty
alike.

BTW, you never explained why the first time you called, why instead of
saying hello at first, you said "what did you find out on Mackey", an
obvious attempt to make me think that you were an aquaintenance of
mine.

Ya friggin loon...

Hello:
I have some questions for anyone using scanner recorder.
I have downloaded and installed scanner recorder. It works great! But I do have 1 question and 1 problem with it. I hope that someone can help me.
1) The version that I downloaded is supposed to have allow for a user defined threshhold. Can anyone cue me as to how this threshold is defined and where the settings are for it?
2) The program works great on my handhelds with their portable antennas. But when I connect my outside mounted discone I get lots of ground noise. This does not occur when the discone only is connected to the scanners. It only happens when the discone and the patch cord to my computer are both connected. Any suggestions?

If any one is interested in the program this the url
www.davee.com

I like the program! I would really like to be able to use it with my outside antenna.
Thanks for your help.
Strong signals and happy listening
Leslie

>Mike

Mike...please.

it is an FYI post so people can
be one with him and his sorrow
and commisserate with him in
a more personal way...to be
one with him as those who are
like him will relish. Being
able to speak with him in his
hour of need a special communication
which no NG can give forth.

bereavement is personal. It should
be shared with those that want to and
do so quietly and with great thought
for their saviour.

His memory is special to those who
so far have called me PUNK and Creep
and more...this is the culmination of
all that is right with this post.
to allow all the Creeps and punks and
indifferents in this world to
share with their saviour their
bereavement....

it allows the NG to go on and
not be made part of their sorrow.
it's the least one can do .....

4635. Re: Is it true that Bill Cheek is under arrest of ECPA?

<ziggy7445@scanner.yahoo.com> writes:
>

>It's a shame too, because it was really starting to work, John. You
went
>from 30 lame off topic posts a day to less than 5. Only two people
decided
>to not join in the ban and reply to you. It was beautiful.
>
>Then Bill flung the proverbial barn door wide open again, for reasons
that I
>am not yet certain. Perplexing, but then Bill makes a point of making
>himself somewhat of a mystery here.
>
>I don't understand it either, but nonetheless, Bill's point is valid
and
>(now) proven: If you are ignored, you shut up. Period. You rely on us.

this was my reason. I wanted to show
how the silence can work wonders with
this flout. this mindless=glut.

My reason was as Phil made out: notice how
he comes on when people post, no
matter what. The mystery was that
there is no better way to get him
silenced than silence itself.

note that I stated his bereavement, his
condolences are to be sent to that address
or number.

finally people can direct their postings
to HIM personally and not on the NG. that
was my idea. that the funeral is alive and
well..

See how he comes back. I was waiting for that
til I posted this. Now that he's been pricked
a bit...now is the time to Leave him alone.

I'll either repost or do another. See how we
can rid the NG of this miscreant
claiming to be all things to his

little group of whoever's.

they can now communicate with him
direct and his daddy will forward
all matter to him...but his daddy
will get to know Johnny better. He
will.

that's it ...

Now, the idea is is to quietly go on into
the night and leave his "few" alive with
their own images.. No more the NG. If
it's really wanted...it works.

There are currenly no digital compatible scanners on the market. A decoder that would have allowed listening to Motorola ASTRO communications was very close to being introduced but has been put on hold pending a resolution of the Bill Cheek case. It really isn't safe to market one now that the government has apparently taken the position that all digital communications are protected under law simply by virtue of being digital.

>mismatch won't create a noticeable loss in received signal strength.

Jake, first of all, I am not attempting to ARGUE with you about LOSS VS SWR, or anything else. However, SWR is directly related to signal LOSS, however insignificant the LOSS may be. Also, it depends on other factors, like how much LOSS you are willing to accept, etc. The higher the operating frequency, the more pronounced the effect of SWR. Also, once again, RECEIVE, especially at VHF and HIGHER, is adversely effected by SWR, and hence, LOSS. This LOSS, both transmit and receive, dependes not only on the mismatch between the antenna and the coax, but by the TYPE of coax used. The poorer the quality of the coax, the higher the loss caused by SWR. But like I said, it really depends on what the individual operator is willing to accept. A 1.5 to 1 SWR (along with the inherent loss it causes) may be completely acceptable at 27 mhz. But The same SWR at 146 mhz, may be totally UNACCEPTABLE. This is because the COAX, at that frequency, exhibits much more LOSS, due to SWR, AND LINE LENGTH. Again, no argument intended, as this is material I learned in Engineering School. I am sorry if you either do not agree, or take it the WRONG way...Joey...

4638. Mackey Post...Explosion Ensues...Back to Silence as An Answer...true.

Newsgroup: rec.radio.scanner
Date: 1999-06-12 00:00:00 UTC

Message-ID: <7jsfb8$5f5@dfw-ixnews11.ix.netcom.com>
Source record: 115666

I posted the info to make
sure that all who see him
as their saviour have a
address to send him their
condolences and bereavement
at passing.

note how I worded it. funeral
in progess.

what i wanted to say was
by posting the FYI he came
to life. Note how he lay
in his coffin until a few
"non-believers' began to
incantate against the idea.

But no matter what, the
idea was valid as
to "we post, he comes
alive" and we all have
to go through the crap
if we so choose to read."

What happened was expected. Same
drivel from him and a few more
name-callings typical of this
fecal-wonderment ona stick.

Now that we see what silence
can do, and now we see the
totality of his genus, the
time is right for the idea
of SILENCE to just do what
he does not want done...

I propose that from this post and a few more
later from others that we do our part and
allow him his due. Silence is the answer.

those who post to this guy on NG, maybe
some of us could e=mail them to remind
them of the problem with the one who is
in the casket. asking them to
desist rocking the =dead=

anyway...let's just continue the answer to this matter at hand and relish in the fact that "we control him". he needs us to live. we don't need him and therefore we win.

Silence.

bill conduit
etc.

>Let me know please. Thanks
>

Marcus, this is not a FLAME, but I will clarify (hopefully) a couple of things. First, your HANDSET does not query the base unit at 10.240 mhz. That is probably the RECEIVE IF AMPLIFIER FILTER crystal. Second, the 3.579545 mhz crystal, is the REFERENCE OSCILLATOR for the DTMF (tone dialer) chip in the handset. That is only used to generate TOUCH TONES. Another problem with what you are trying to do, is that the SECURITY CODES are probably entirely different in the HANDSET you are trying to modify. If so, it is IMPOSSIBLE to make it do what you want. Modern cordless phones, even the OLD 46/49 mhz ones, use a tiny microprocessor to carry out instructions. It would be easier for you to try to BUY a REPLACEMENT handset for your MOM's phone, than to pursue what you are attempting...Joey

4640. Need St. Louis & Illinois Freq's

Richard:

This might work for you. Choose a channel to use for your searching, even if it has a frequency programmed. Go to that channel via MANUAL to approach it. Hit PROGRAM, enter your lowest frequency, then hit the arrow pointing UP. It should start searching upward. At any time you want to reverse the direction of the search, just use the opposite arrow. To return the former frequency of that channel, just enter the frequency numbers and hit ENTER.

Hope this works for you.

Wow! This is really getting surrealistic. Even most no-coders know how to send and recognize SOS (That's why they could use it in the show "believably". LA cops AFAIK, don't receive Morse training). Besides that, (a) it was a stupid plot device, (b) Martin Milner still can't act, and (c) TV shows are probably not a really great input to base federal communication policy upon.

800mhz is a very tricky band. The system that I listen to in San Bernardino CA has trouble (I mean big trouble) transmitting indoors. To the point where the guys are calling in their stuff to the dispatcher on the phone.

My pro-91 reception changes from inch to inch when I am indoors and frequently losses the control channel causing me to believe that 800 mhz does not belong in the city.

NEXT UP: Trunked systems that use VHF and/UHF. Its possible, and qould alleviate the above mentioned trouble.

Question for the group:
I am running a RS PRO-34 scanner-only using the stock
rubber ducky antenna. I keep it here right next to my
computer. Am inside of a brick house.
Does anyone have a clue of what the normal receiving
range would be for this setup?
I can normally rcv traffic up to 60-75 miles away.
BTW, the terrain here is rolling flatlands-NE Oklahoma.

This is very possible.
A area in Clearfield county that tested good in the winter is now
pretty much dead.
This theory was not made up by the county or Motorola.
Company 11 and 12 came up with this theory as far as i know.
Also, from what i hear, there is no conventional tower in that area
that can be used.

BTW, what type of encryption is used on this system?
There is a beep before and after the transmission which is all static.
Can a computer program decode these?

What company do you belong to Captain Dunzel?
I assume that since you used the word captain, you're from Clearfield
county?

Maybe, but it's too late for the government to buy another radio
system, when they just paid millions and millions of dollars on the
800 radio system.

It's very possible, seeing as how 800 mhz signals don't mix well with
foliage. Is that the Penn State system that you are talking about, or is
that something else. I have heard that the PSU system works quite well, as
long as you're close to State College or on the campus. Is the rest of the
county being added to this system, or did they start a new one from scratch?
I make several trips to the area each year, so I guess I'll need to make
some changes in my scanner programming.

Well, that's the hard part. Yes, it will scan, that's no problem. You'll need to one of two things, either buy and RIB, programming cable, and RSS for the model that you buy or take it to a technician or someone else that has the tools to program it and have them do it for you. Not just anyone can go into a Motorola shop and get a radio programmed with your local public safety freqs., although if you wanted them programmed for receive only (no TX), then they might do that for you. I've had that done before and never had any problems, until I asked for TX capability on some of the channels, aside from the ones that I was licensed to use, but you should be OK with RX only. Of course, about the time you do all of this, someone will come out with a digital scanner for about half the cost of what you just went through!

PSU and State College Borough use DVP encryption, or at least they used to. No way to decode it, unless you have a radio with the same key loaded into it. If you know someone, maybe they'd let you "borrow" their keyloader for an hour or something. Otherwise, you're pretty much screwed.

It's something else.
It's a county wide system that we're talking about.

>I make several trips to the area each year, so I guess I'll need to make
>some changes in my scanner programming.

The State College PD went to the new system also.
Both systems share the same frequencies.
There are two control channels, one for county wide and one for PSU.

4697. Clearing memory on PRO-91

Newsgroup: rec.radio.scanner
Date: 1999-06-13 00:00:00 UTC
From: John Miller <mcmiller@netboise.com>
Message-ID: <37645FEB.23CA826C@netboise.com>
Source record: 115475

Can anybody tell me how to clear the memory of the
RS PRO-91 ?
Since it's made by Uniden for RS, I assumed you
just use the standard Uniden memory clearing
method:
press: manual 2 and 9 and turn on. This model
will not do that.

Thanks,

John

4698. HELP! BC145xl died diagram avail.?

Newsgroup: rec.radio.scanner

I have a BC145xl that died on me. upon opening it up I found a cooked resistor on the board right after the power cord socket. I need a diagram to find the value and replace it. Any one have one, know where to find one on line? anything? I use it to monitor the local fire/police/amb so as to keep my 2004 free for the "fun stuff"(was that a satillite or a UFO?) Thak you in advance, Al

there is a substance that is conductive & liquid that might work ... but i think that the best thing to do is to replace the chip ... i have however been able in the past to scrape the epoxy from the chip & get enough tin to solder a fine wire to & make a connection ... this is very delicate work & you need a very fine iron tip .... but ive done it many times ..

There are also radios like that that are in use by public safety. Primarily used in helos. They need to have the ability to communicate with any police and/or fire agency regardless of the freq. their on. All they do is dial in the desired freq. and talk away. It's not illegal either. It's called MUTUAL AID.

uh.. how fast is this Optocom by Optoelectronics? Could you please give me a rough idea? Also, if i want to use not really as a copier but just for document archive, would the software come with is simply save all the document as a tiff file (and don't try to OCR- it) and then even automatically compress the tiff file?? What I really need is such a product that would allow me to archive documents/articles quickly (without printing out, but save as a jpge image or some smaller size of image files)

any comments?

Check the diode at the entry of the power in your radio.

...If there was a help file on it, id read it. Instead I must bug all of you.

I just d/l'ed the software, and it seems to be a great idea... but how do you hook your scanner up to it? Do you just "mic" your speaker, or do you run it from the "aux out" jack of your scanner to the line in -or- mic in on your computer.

Help!

email me personally if you have help for me.

>
>Do you know any studies that point to radiation hindering radio communications?
>
It's not the radiation directly, it's the effect of the radiation on the
ionosphere that disrupts communications. As I recall, HF "skip" propagation
is gonzo for many hours after a nuclear blast, but the effect should clear
up in 24 hours or so and you can go back to DXing... if you still have
a power source.

I don't recall any references offhand but if you really wanted references
instead of just confirmation that the effect exists, e-mail me and I will
see if I can find some.

Can you go to radio shack and buy a 36' mast and anchor it up against the highest part of your house?
Alot cheaper than a tower ($60) and you can make it telescope up and down instead of having to climb a tower.

>GH

Sorry to hear that your Ramsey converter kit didn't make the grade, Gary...If the kit had a defunct part, it wouldn't matter HOW careful you were, building it...And unfortunately, with these tiny parts, you just have to go on FAITH, AND skill. I have built MANY kits, (including the Ramsey converter) and put together roomfuls of projects from scratch.
Some worked, some didn't. But that converter worked great! As a matter of fact, it works just as good as my GRE 8001. Guess I was lucky...I have built other Ramsey Kits, like the little 2 meter power amp for about 35 bucks...That worked good to. I plan to keep both of those converters though, as they come in handy to get the local POLICE band... :) ... Joey

>at least he's trying. Food for thought.

Robert, who said anything about BETTER? I don't think the newer scanners are as GOOD as the old ones. But unfortunately, when scanners GO SOUTH, they usually stay there! Heck, even if you HAVE it 'REPAIRED', all they do is swap out a circuit board. And that is because they HAVE IT to swap out, most people don't. And then it is likely to cost more than the unit is worth... There is nothing wrong with TRYING to fix something, as I have fixed HUNDREDS of electronic devices. (Thousands, if you count my business pursuits). Scanners are full of CHIPS, and the average 'JOE' is simply not equipped to tackle sush work, (usually). Even if someone KNEW which CHIP was bad, (and it usually IS one of the chips) getting one from the Company is difficult, and EXPENSIVE! And then there is the problem of removing the old one, and installing the new one, without Murphy's Law coming into effect. But besides all this, couldn't you tell my post about Radio Shack was in JEST? Gosh, I don't want the guy to through his radio away! Joey

If you don't fix that radio, it works great at keeping your fan from blowing the papers off your desk...P.S. That was kinda stupid for someone to replace a fuse with a BOLT...

4752. Wanted: Review resource for ICOM scanners

Newsgroup: rec.radio.scanner
Date: 1999-06-13 00:00:00 UTC
From: McAllister Bryant <bryantm1@us.ibm.com>
Message-ID: <7k0o1l$13vi$1@rtpnews.raleigh.ibm.com>
Source record: 115626
Cross-posted to: rec.radio.scanner,rec.radio.shortwave

Hi,

I would like to find a shortwave or scanner web page that reviews the ICOM 7000, 7100 and 8500 receivers. OR, what impressions do the groups have of those radios.

Also, if any of those are available on the used market, please email me.

Thanks,

Bryant

Blake, I only know that 417-257-2777 came up on the list with a call durationof 1
Min. That phone number comes back on the (www.infospace.com)
reverse look up as being listed to "Blake Bowers (& two other people), 6281
County Road 9800, West Plains, MO 65775". My Father reports he called that
number back & the male voice that answered the phone claimed to not know of
anyone named "Mackey" and denied making the previous mentioned call. My
father reports that the male voice later claimed that the only other person in
the
house was his son and said or suggested it must have been the son that made the
call.

> No harrassment as you lied about.

You should read the Oregon Revised Statutes, there has been a report takenby the
Shrf. Dept. !

> You are a filthy liar John, and you know it. It still seems strange

No Blake, YOU LIED when you denied making the call!

I turned on (or should I say, tried to turn on?) my BC760XLT this morning and it doesn't work! To be more specific, the display is blank but lights up, I get no beeps whatsoever from any of the buttons, and the squelch and volume still work. Anyone have a guess what the problem is?? Is there a reset switch anywhere, or would that be too easy?? I don't want to send it in unless that's a last resort. Please reply to this group if you can help out. Thanks.

Shinwa also makes a similar unit. Same size but I think it has a broader freq range than the RZ-1. It comes with a wireless remote but it doesn't have the video output. I know of one for sale but it's around the 325.00 range.

Don.

OK, but I'm not sure what the question is exactly?

If you get a copy of Police Call, that is a good start - just find the data for your area and plug it in to the scanner.

Another excellent source for scanner fuel is the web - pick a search engine and type in "scanner frequencies" to see what I mean.

Eventually, you'll outgrow the scancat (150 channels is barely adequate for most metro areas, and the interferance a dual conversion scanner receives will drive you nuts in urban areas) and want to step up to a better unit. You may also later on want computer control and trunking capability. Maybe later you'll be ready to try decoding some digital signals you receive. I've been scanning for over 12 years now and I still don't "know it all" - I probably never will!

Check out this site: http://www.strongsignals.net/htm/new_user.htm This is a new users section that I highly recommend you read, and the rest of the site is extremely helpful as well. You'll-Phil

There is (or was) a "virtual unlock" of 800 mhz by
Cellular Security Group in Gloucester, MA. Its a
down conversion of the freqs to the 360-380 mhz
band and involves modifiying the attenuator button.
They charge $99 and it works very well.

4776. Pro2021 question

Newsgroup: rec.radio.scanner
Date: 1999-06-14 00:00:00 UTC
From: pro43@aol.com
Message-ID: <19990614192920.12792.00002099@ng35.aol.com>
Source record: 115350

Anyone have the schematic or parts list for this radio? I sure could use a copy. Checked out RS's site but no schematic and incomplete parts list (surprise).R-143 blew in the radio Im working on and it is so fried I cannot read the color codes. So I at least need the value of R-143. However, I am pretty sure my problem doesnt end there. Thanks for any and all help. Please respond to my e-mail address. THanks, Ira Cooper

4777. FS: PRO 57 scanner

This is an excellent little 10 channel scanner. It would make a great back up.
I works great and looks as good. I am only asking 30.00 + shipping. I do
have a pwer cord for it and its antenna.
Thanks for the read,
Andy

4778. I'm looking for info on current packet radio set-ups..56k especially

I'm new to the whole packet radio scene and I am trying to get some more info on the technology. I have done the usual
search engine thing but I haven't come up with a whole lot of info.

I'm looking for current lists of recommended equipment, general info about AX.25, info on clubs/groups in CHICAGOLAND
area, satellite freqs, repeater freqs... etc.

Please post any links you may have to the news group

Thanks for all of your help

For sale, Radio Shack pro-2066 mobile trunking scanner. I paid the full $220 for it new; it is about 6 months old and has been used as a base unit, so it's in fine shape. Everything is included except the original manual, which somehow turned up missing, I replaced it with a download from the RS website.
Must sell- make me a fair offer. (Please no trades.)

Frank,

I believe there once was an NWSCAN-L mailing list but I don't know if it still exists or not. I tried looking for it on the L-Soft website and couldn't locate it. I'd be interested in knowing if you find one or not. I live in the Vancouver, B.C. area and am getting back into monitoring Northwest Washington.

Cheers,

Paul

Icom R75 Receiver -- My 2 Cents

I've seen the ads and description @ Grove and Universal,
but aren't you just better buying a Drake R8B. It seems after
putting down your money for a basic R75, you need to buy
a lot of extras which quickly add up to some major bucks.

I would like to see a side-by-side comparision with the
Drake R8B which has a 1000 memory positions, I
think!

OK well then to answer your question, NO. They aren't available
because they're illegal. I do however find it hard to believe that
someone would inquire about such a thing with no interest in buying
it. But hey, you sound like an upststanding citizen (he said
sarcastically). I'm sure you would never operate on a frequency you
were not supposed to be on now would you? Keep your pirate bullshit
in the pirate groups asshole.

Pirates are people who can't pass the ham test or get a job in radio.
Did somebody say wannabe?

The next fad are these new FRS radios. While at the shore house this weekend
(Ocean City, MD) I saw at least 5 different people talking on these. You wait
and see, these are the next set of frequencies which will be banned from our
scanners....

4799. Re: Help with new Trunk Tracker.

Newsgroup: rec.radio.scanner
Date: 1999-06-14 00:00:00 UTC
From: Chuck@la-radio.com
Message-ID: <37675f01.361791544@news.uia.net>
Source record: 115500

Type II is indeed the default. I have the RS PRO-90 and had to change one of my trunk banks to follow a non Motorola II system. It's really not that difficult because most of the systems operate on a standard plan. If they don't it's difficult to find out enough information about them anyway. Regarding the weak signal issue, 20 miles shouldn't be too far away. Is the transmitter located behind hills, mountains or dense trees? That would do it.

On Thu, 10 Jun 1999 22:25:12 -0500, "Ruff-Cut" <sharkman@execpc.com> wrote:

But at least FRS users don't have to pay rediculous talk time charges. Got
to give them that much. No monthly fees either. So the range is lousy, for
those who use them it's apparently enough. I can see some FRS users coming
into ham radio in the future, wanting more range...

Hello to the newsgroup! You folks may be interested in my mint 2006. I listed it on eBay this morning at the following:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=116961953

I welcome questions about this fabulous set.

Most Usenet Groups do not allow the posting of binary files into the
message base so normally a binary group is used to post specialized
software for people, like trunk-tracker or say ACARS.

I know. In fact, I've been doing some work with EMI and EMC folks a
few months back, and they have some nice broadband equipment. Don't
know if you could exactly pick any modulation scheme you wanted, but
I suppose you could build that part if not.

Direct digital synthesis and mixing could conceivably give you not
only very broadband capabilities, but the ability to jump from one
frequency to another almost instantly for some spread-spectrum
capabilities as well.

My point was to tweak the twit who took offense before any was
offered, calling us names and prejudging our answers before anyone

even responded to his question. If you read the other posts here, it's pretty obvious the majority of folks here don't think he deserves a serious answer with such a snotty attitude. This is a pretty nice newsgroup, and folks are generally very eager to help on any technical matter, so maybe this fellow should change his handle and come back with a new attitude, or at least ask the question again in a kinder, gentler post. :)

>My point is, if their such good radios why did Cobra quit making them?

Why did Chevrolet quit building rear-wheel-drive Impalas?
Because the market dried up, and even though the cars were arguably the best ones in their class, the layperson was into front-wheel-drive cars and the good ol' bulletproof Impala went the way of the dinosaur. In the world of CB, the market is for better or worse gone. With people not willing to pay for a Cadillac when the Yugos were prominent, they were discontinued. It's called capitalism.

>BTW they are only running $175 for perfect and $125 for scratched & dented!

Yeah, where? They're running $250-350 out here.

Actually, the radios used for public safety, and helicopters in public
safety, still follow the accepted band plans, ie 150-174, 450-470,
etc.

In fact, they are seperate radios for each band. They may be tied
to one control head, but they are seperate.

You have to buy the band you need. Try dialing 88.0 into one, and you
will find it just won't go.

Took the plunge this weekend and bought the RE 2000 ALPHA from Racing Electronics to replace my Uniden BC100 XLT. Very nice scanner. For the race track the tone codes are great. Absolutley no interference. I realy like the alpha display. It takes a little time to get use to not seeing the numbers scan by or the banks being searched thru.

Cudd

Those radios are limited to the public safety and aircraft bands.
They don't transmit on FM BCB or TV bands, etc. Also, they don't
transmit WBFM for example.

I'm interested to know if it's a "real" spread spectrum phone as advertised.

I know the Panasonic 2.4Ghz phone is a farce, and I'm just wondering if anyone has this model and has, in fact, tried to pick it up on a scanner.

Anything else you like/dislike about this phone?

Try any of the V-Tech digital 900mzh. I sell the V-Techs and have had very good luck with this brand. They are reasonably priced and have a low "out-of-box failure" rate. I own their Alpha Platinum and you can't pick it up on any scanner. We use the sets in large plant areas that normally have a lot of electrical static that usually render a regular cordless useless.

No, digital cordless phones are not capable of being monitored by a scanner,
modified or otherwise. You may be able to hear the digital signal, but
without decoding equipment you won't be able to do anything with it.

4849. Scanner Recorder Help

Newsgroup: rec.radio.scanner
Date: 1999-06-15 00:00:00 UTC
From: Victor Watkins <vwatkins@wt.net>
Message-ID: <7k711h$a5p$1@sys14.hou.wt.net>
Source record: 115300

I have installed Scanner Recorder 1.4.1 and am pleased with this application. I am placing my computer microphone beside the speaker on the Pro 2006, and the audio seems to be ok on playback. No problem with this arrangement. Works great!

I would like to be able to use a cord from my record jack on the Pro 2006 and into the line level input on the sound card, so that I can decrease the volume level to zero. I don't want to have the audio at an audible level that would disturb others in close proximity. Is this arrangement possible? I am not having any luck so far. I can see a very slight deflection on the graph, but it is not enough.

I am using a mono plug on the sound card side into the line level input. Is there a possibility that I may need to use a stereo plug instead? Are the pins shorting out with a mono plug, or what? Should I be using the speaker jack instead?

Any and all assistance will be greatly appreciated!

I'll keep browsing the archives with Deja and maybe I'll find some additional assistance that I need.

Victor,
KB5AKO

I have a Pro 51, 200 channel hand held scanner that I would like to trade for a digital, portable SW radio with ssb capability.

The Pro 51 has a date code of 10A5. It comes with antenna, belt clip and box. No manual. Scanner is in excellent shape. It uses 4 x AA batteries. Excellent image reception between 896 and 910 mHz. The Pro 51 also has fire, weather, and marine band search. The Pro 51 covers:

Band coverage:.....12 bands plus weather channels
Frequency range:.....9 to 29.7 MHz (10 meter amateur band)
29.7 to 50 MHz (VHF low band)
50 to 54 MHz (6 meter amateur band)
108 to 136.975 MHz (Aircraft band)
137 to 144 MHz (Military land mobile)
144 to 148 MHz (2 meter amateur band)
148 to 174 MHz (VHF high band)
406 to 420 MHz (Federal government land mobile)
420 to 450 MHz (70-cm amateur band)
450 to 470 MHz (UHF standard band)
470 to 512 MHz (UHF "T" band)
806 to 956 MHz (Public service except cellular band)
Weather service channels.....162.400 MHz 162.500 MHz
162.425 MHz 162.525 MHz
162.450 MHz 162.550 MHz
162.475 MHz

Thanks,

D. Schopp

Frequency hopping isn't terribly painful though, you just program all
possible channels into tne unit, or use a spectrum display
unit to follow the conversation.

Getting DSS equipment is a different story. Probably would be easier
to make something out of an existing DSS phone.....

Even so at the end, joe scanner user is not going to bother going
through the trouble when 90% of all the other targets are
fully analogue.

>There is supposedto be a new PUBLIC SAFETY frequency in tha area

define most government agencies. about the only thing you'll find in that band is wireless mics, NFL field communications(encrypted) and tracking bugs, and the existing UHF TV channels. Other than that as far as the "new public safety band" you can forget that until all the VHF TV channels go digital, then look out for the new all "digital" public service bands.

Sorry for the confusion, everyone re my earlier posting last night.
eBay in all of it's wisdom, yanked the auction without any warning
due to it's reference to cellular frequencies (this mint unit is
cellular restored and has a 15% increase in it's hyperscan scan speed).
No one to contact at eBay, so I've relisted it, with any reference to
cellular carefully removed. Please visit the auction at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=117731930

Please feel free to contact me regarding any questions!

MX-Com voice scrambling boards removed from 2-way radios.

These boards will encode and decode audio. It uses simple voice inversion which is similar to some of the Motorola scrambled cordless telephones. The scrambled audio sounds like a duck quacking.

2 boards with installation instructions.

$ 60 for the pair including shipping to the lower 48 states.

Please reply via e-mail

I doubt it. FRS doesn't have an enormous lobby with big $$$ financial
backing like the cellular radio industry does. Also, none of the FRS
manufacturers have bullshitted the public into having an expectation
of privacy when using FRS.

The real danger is having the FRS band go the way of the Citizens
Band... :(

4874. FS BC Scanners 560XLT & 20/20

I've got a mobile scanner, it's the 16 channel 560XLT, basic, but very compact.

I've also got a vintage Bearcat 20/20. This one has two banks of 10 frequencies, with an A/B slide switch (factory) that will access a second pair of channels.

I'd like to get $50 for the 560, and make me an offer on the 20/2

Yes it's a radio, but it has some advantages over ham and CB that I
and many others are willing to PAY for because we value our privacy
(compared to ham and CB radio) and freedom of speech. You can talk
about whatever you want and use as much profanity as you want without
breaking any FCC rules. You don't have to worry about malicious
interference. You don't have to identify every 10 minutes. You don't
have to pay for a P.O. box to avoid having your home address spread
all over the internet via callsign servers (if you are a licensed
ham). You don't have to worry about CC&R's and interference to your
neighbors' home electronics. You don't have to deal with the mentally
unstable "stalker" types who will DF you just to find out where you
live (and then harass you if they are so inclined). Equipment costs
are MUCH lower with cellular, especially with all the "free phone"
deals out there. Finally, unlimited night and weekend calling plans
cut way down on airtime costs.

If the person has an older scanner (like my RS Pro-66) or an illegally
modified one (I heard theyre easy to modify) you are capable of being
listened to. The new ones have Cellular and PCS blocked.

I would like to hear opinions on the BC895xlt. Would this be a good time to buy one. I mean is there a replacement on the horizon? Pros and cons please. Is there a better radio for a similar price? Thanks!!!!

>day!! And over 10 000 people a week!!!
>Now, isn't that the best advertising?? - this ad was put onto over 13 000
>news groups!!!

And annoyed 13000 newsgroups. It's a BAD way to advertise, Justin. It only ends up irritating people when you indiscriminately post ads (read "junk mail) in an untold number of groups. It's also rather screwy to be encouraging others to do the same.

>Yes it's a radio, but it has some advantages over ham and CB that I
>and many others are willing to PAY for because we value our privacy
>(compared to ham and CB radio) and freedom of speech.

It seems to me hams talk about anything they want to these days...

>You can talk
>about whatever you want and use as much profanity as you want without
>breaking any FCC rules.

Well, boy, THAT'S an incentive if I ever heard one... You mean they don't let one use profanity on the ham bands? Could've fooled me...

> You don't have to worry about malicious
>interference.

Maybe not..

> You don't have to identify every 10 minutes.

Big deal.

>You don't
>have to pay for a P.O. box to avoid having your home address spread
>all over the internet via callsign servers (if you are a licensed
>ham).

I've heard many people quite stupidly giving out sensitive info (credit card #'s, phone numbers, addresses, etc.) over their phones, cordless and cellular, not on any scanner but just being in the same room with them. This is privacy? Right...

>You don't have to worry about CC&R's and interference to your
>neighbors' home electronics.

Tell that to anyone with a baby monitor who hears their neighbors' cordless phones coming in right over it...

> You don't have to deal with the mentally
>unstable "stalker" types who will DF you just to find out where you
>live (and then harass you if they are so inclined).

ANYONE with a receiver capable of hearing wireless phones of any type can hear you, it is not hard at all to do. Most of them don't, but you're fooling yourself if you think your cellphone is secure or private. Security may be the company line, but it ain't the truth.

> Equipment costs
>are MUCH lower with cellular, especially with all the "free phone"

>deals out there.

Moot point. If you want to compare the cost of initial startup, sure cellular is cheaper than an HF rig or even a 2 mtr handheld. But then compare what you've paid in cell charges to what it costs to talk around the world on HF, after say, three years...

> Finally, unlimited night and weekend calling plans
>cut way down on airtime costs.

Hams have night and weekend calling plans, too. It's called propagation, and while it is not as reliable as a good ol' "private cell phone" it is a hell of a lot cheaper, and far more fun.
Don't get me wrong, wireless is wireless, and every type has it's advantages.Hams use their stuff for hobby and for fun, and many also for public service and emergency management. Most cell users have business and convenience needs which are served very well by such a system. But don't think of cordless and cellular phones as more than what they are: a wireless intentional radiator for purposes of communication. And as such, comm's on cellular as just as susceptible to reception and "eavesdropping" as any other radio service, all U.S. laws from the cellular industry lobbyists to the contrary.

>a lot of extras which quickly add up to some major bucks.
>
>I would like to see a side-by-side comparision with the
>Drake R8B which has a 1000 memory positions, I
>think!

I thought about that before buying the R75. By the time you add two
more filters (at, say, $150 each) and the DSP option at $120 (and
maybe these prices are high), that's $420 + $800 = $1,220, or more
than an R8B. But the thing is the price of entry is only $800, so, if
you're like me, that's attractive. The 100 memory problem is _VERY_
annoying, but I suppose I could hook up a computer... Oh, the other
reason I went with the R75 is that it's smaller and can be easily
powered by 12V (maybe the R8B can be also, I don't recall).

Please know what you are talking about before you post. The person was asking about digital 900 mHZ cordless phones, not cellular or PCS phones. No scanners are able to monitor digital 900 mHZ cordless phones OR PCS phones. That's the whole point of making it digital!!!! (besides the alleged clearer reception) BTW, PCS is not blocked (to my knowledge). Doesn't matter much, you won't be able to decode the conversations.

Bill Cheek is a man who lives near San Diego. He used to be active on Fidonet but then had to leave due to reasons we won't speak of now. He then became active on this NG & the internet but was again the cause of much trouble. Various problems with Mr. Cheek's action's resulted in Peter Laws kicking him off of the "Scan-L" mailing list. More similar problems with

Mr. Cheek caused him to have his internet access revoked by his Cable company ISP last summer. Recently he was briefly held by federal authorities and has been charged in federal courts with various illegal actions in regards to the use of scanners. He is the owner & operator of a company called "Comtronics" & has produced a few books based on information he has complied from various sources.

Bill and Cindy Cheek have demonstrably performed more for the enjoyment of our hobby than anyone else.

Theirs is a long history ofproviding first-rate information and modifications for many scanners. Not just "open up the freqs" type of mods, but mods ranging from simple audio improvement circuits to the addition of banks of channels to scanners that were a little lacking. And, of course, their computer interface circuits.

Due to the fact that they published a regular newsletter stuffed full of news notes and industry inside info and tips and techniques and have done so much for the enjoyment of scanning...they have gathered detractors. Detractors with chips on their shoulders - for whatever reasons. Envy immediately comes to mind. Whatever.

Anyway, read all the replies to your post. Filter out the emotional ones and dismiss the ranting. There's plenty of ways you can independently discover the "true" story behind what Bill & Cindy have done for the hobby.

>Does it have a mouse and if so where?

I had the Contura 486/25 which suceeded this model. The "mouse" is really a little trackball that is integrated into the case. It's a neat design, but you have to keep the trackball immaculately clean or it will skip - the mouse will not move accurately. The nice thing about this computer is that it's small. Mine weighed less than 7 pounds.

It was a fun toy while it lasted, but the ribbon cable inside leading up to the display broke, making mine useless. I opted for the Toshiba 2150CDT instead of fixing it.

>
>I want to buy a new cordless, but really don't want anyone listening in.

The truly digital 900Mhz phones are about as secure as you can get (You have to be careful though, some phones say they are digital but aren't).

A scanner will still pick up the frequency, but it will just sound like white noise - static. For someone to sucessfully monitor your phone, they will have to be able to run the signal your are transmitting through a decoding circuit (or program, if such a thing existed) and then from there to a vocoder to convert the digital data back to voice. And this is only if the signal is encoded and NOT encrypted. If it is encrypted as well, then our phone voyeur will also need to know the "key" or code to decrypt the signal before processing it.

Because listening to any wireless phone is now illegal, I don't think you'll find anything that can do what I have described above available to the general public. Of course, the government is exempt from it's own law, and could legally purchase such devices, if they were available. Isn't that nice of your Uncle Sam? ;-)

Joseph, I suggest you withold drawing any conclusions until you've read a number of posts from both persons, seen what their contributions are, and draw your own conclusions. Jmackey establishes his own reputation with posts like this, which serve to neither provide specific information, nor improve the knowledge base of our interests. Bill Cheek has been very generous providing private and personal help to those asking questions here - at least to me and many others here. Jmackey has never answered any of my posts containing questions.

CSP Technologies has released the ScannerBase XE beta. This product has all the features of ScannerBase but utilizes compressed database files that can be downloaded from our Web site and does not require the ScannerBase CD-ROM. The FCC data files are current as of 6/1/99.
This product is FREE. See our site www.csp-tech.com for details.

Also...
Visit our site www.csp-tech.com if you are interested in receiving the ScannerBase frequency database CD-ROM (normally $29.95+$3.95 S/H) for just the $3.95 S/H charge. Once you have the CD you can download version 2.02 of the program which has many new features and is also free. Version 2.02 fixes a bug with indexing in previous 32 bit versions.

>Whats the value of a used Pro 43 radio shack handheld scanner?

Ohh man.. that is the worst scanner ever made.. IN fact its soo bad, I
will take it off your hands for $20...

OK OK OK... You got me.. I am full of it.....

The PRO 43, depending on condition, and depending on capabilities can
be worth a lot. Might I suggest going to auction and seeing what
comparable models go for.

I'm thinking of buying eith the ICOM R10,the AOR 8200B or the Alinco model,though I can't find the model number. I would like comments from any that have used any of these and in particular whether the AOR warrants a price of $150 or so over the other two.

Thanks
Alex

My webtv is a Plus....It has a mic plug on the back panel, and allows me to record 30 second recordings on these postings, or any e-mail or message boards for that matter. I don't appreciate being blamed for something I would never do, like making a virus. I'm not stupid and don't tell me what I can do with my machine! I'm sorry for getting angry and posting rude messages, but I'm just trying to defend my position. Also, can really care less if you do or don't listen to the recording, beings how I wouldn't want your help now anyway.

I think I can help on this:

Lets say you have programmed in this imaginary trunked system:

Ch. 1 856.1000 (voice)
Ch. 2 856.2000 (voice)
Ch. 3 856.3000 (voice)
Ch. 4 856.4000 (voice)
Ch. 5 856.5000 (data)

When you set your trunktracker in trunked mode on this system, the radio sits on channel 5 waiting for the data stream to indicate a unit is transmitting. Once a user of the system initiates a transmission, the scanner reads the user ID (Talkgroup) and the channel information from the data stream, then switches to the appropriate channel

So let's say that the repeater on channel 1 pipes up with the ID while your scanner is listening to the data on channel 5. The repeater isn't a user of the system, so it doesn't have an ID assigned to it. And, since no user is actually transmitting on channel 1, the scanner doesn't switch to channel 1, so you don't hear the ID.

Also, you will not hear it if it goes out on the data channel because the scanner mutes the speaker while it waits for an ID. Besides, if a morse ID went out over the data channel, then your scanner (and all the radios on that system) would temporarily "lose" the data channel, so most agencies don't send ID's on the designated data channel while it's in use.

That should clear it up, I hope.

I've had my BC895XLT for about 4 months and have not had a problem.

Check out http://www.strongsignals.net/ and click on the upper bar where
is says Radios.
This is a good site for information on just about any scanner.

My thoughts exactly. Also, there is no alpha display on this unit and the
CTCSS is just that, no DCS, and it takes a while to scroll through all the
tones, until the scanner will be able to decode the right one. Hopefully,
with the next model, it can pick up where it left off, and add DCS and an
alpha readout. Aside from that, it's a nice scanner for $200.

4922. Trade Pro 51 Scanner for SW Radio

I have a Pro 51, 200 channel hand held scanner that I would like to trade for a digital, portable SW radio with ssb capability.

The Pro 51 has a date code of 10A5. It comes with antenna, belt clip and box.

No manual. Scanner is in excellent shape. It uses 4 x AA batteries. Excellent image reception between 896 and 910 mHz. The Pro 51 also has fire, weather, and marine band search.
The Pro 51 covers:

Band coverage:.....12 bands plus weather channels
Frequency range:.....9 to 29.7 MHz (10 meter amateur band)
29.7 to 50 MHz (VHF low band)
50 to 54 MHz (6 meter amateur band)
108 to 136.975 MHz (Aircraft band)
137 to 144 MHz (Military land mobile)
144 to 148 MHz (2 meter amateur band)
148 to 174 MHz (VHF high band)
406 to 420 MHz (Federal government land mobile)
420 to 450 MHz (70-cm amateur band)
450 to 470 MHz (UHF standard band)
470 to 512 MHz (UHF "T" band)
806 to 956 MHz (Public service except cellular band)
Weather service channels.....162.400 MHz 162.500 MHz
162.425 MHz 162.525 MHz
162.450 MHz 162.550 MHz
162.475 MHz

Thanks,

D. Schopp

>usability and value for money.

Sensitivity - very good.

Usability - fair, due in part to poor documentation, and in part to so few keys. However, as I get used to it, it's getting better.

Value for Money - I'm quite happy.

Get the Diamond SMA3 antenna right away, it'll make a BIG difference in performance. A computer cable interface and software is mandatory, and there are several out there.

Tony

When the Tropez first came out, someone posted to this newsgroup that he
was able to monitor "in the clear" audio on his scanner a few feet from
the base set. The transmitter had some local oscillator frequencies which
resulted in unscrambled radiation that could easily be monitored; the
poster even listed the frequencies. I would not rely upon one of these
devices for absolute security until trying it myself.

4927. Operating Scanner Near Computers

Newsgroup: rec.radio.scanner
Date: 1999-06-16 00:00:00 UTC
From: mailme@rizzap.com
Message-ID: <3767dfba.220690395@news.uia.net>
Source record: 115243

I recently bought a RS TrunkTracker base model. When I installed it in my den it worked great. Reception was adequate at both low freq's (39MHz) and high freq's (800MHz). When I took the scanner into the rom where the computers are I picked up a lot of interference and reception was substantially degraded.

My question is, is there an easy way to isolate the scanner from this undesired radiation coming from the computers? Would an external antenna placed away from the computer equipment do the trick?

Thanks in advance!

The R2 is Great!! I don't think the scanning speed is slow at all!
I really like its compactness and I am still using the original antenna. The only time I change to Radio Shack's telescoping antenna is for AM stations or shortwave which I hardly listen to. I also have Radio Shacks 20 ft. wind up wire shortwave antenna which does great. Its good on batteries, sounds great especially through the sony ear bud headphones. Would'nt sell it for nothing.

You really have to read the manual and spend some time with it. I spent 2-3 days with it before I started to be useful with it. Now everytime I use it and work with the manual I discover more and more it can do and I am happier. Good luck.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $49 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was

permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and

store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi

antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.
Middlesex, NJ 08846
tel. 908-356-7787

Cal Crystal Lab Inc.
1142 N. Gilbert St.
Anaheim, CA 92801
tel. 714-991-1580

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

G & G Communications
9247 Glenwood Drive
LeRoy, NY 14482.

FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a team of G-men protect the | president while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS

(Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas. The Austin Condor is available from Grove Enterprises.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter

and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A (available from Amateur Electronic Supply) or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is http://www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (828)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 7825 Black Street Rd., LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency

lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the

scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

All 1999 meetings (except August) will be held on Saturdays at Phillies Pizza, 6300S. Kingery Highway, located in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook, IL,

The 1999 meeting schedule is: April 3, June 5 (picnic at Argonne National Labs), August 7, October 2, and December 4.

The CARMA Picnic will be June 5th, 1999 at the Argonne National Labs Picnic Pavilion, Cass Avenue, south of I-55 in or around Darien or Lemont. The picnic will start whenever someone arrives. The regular meeting will be in the Pavilion at 1:00 PM. If the weather is totally frightful we also have a room inside the Laboratory building available for us.

The Picnic is BYOE (Bring your own everything) If you want to eat or drink, bring it with you, as well as your BBQ or six pack.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from
the crystals used in the conventional single channel
Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. If you wish to
purchase a new receiver with "Plectron-like" signaling
capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

PRO-7A: Channels 1 - 4 or 5 - 8 Dead

If the first or last 4 channels in your 8 channel PRO-7A crystal scanner are not working and the lamps for those channels won't light, replace IC4 or IC5 (type 7400A).

group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Jan 1996 - Plectron & Motorola Alert Monitors
Feb 1996 - Radio Shack PRO-2042
Mar 1996 - Tips for Fixing Bearcat Scanners
May 1996 - Compendium of Scanner IFs
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Aug 1996 - BMI Nitelogger II tape recorder activator
Sep 1996 - PRO-2022 modifications
PRO-2042 baseband audio tap
Oct 1996 - Radio Shack PRO-2046 mobile
Nov 1996 - Build a wooden mobile radio mount
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10

Oct 1998 - AOR AR8200 portable
Nov 1998 - Alinco DJ-X10T portable
Dec 1998 - Radio Shack PRO-91 portable Trunktracker
Jan 1999 - AOR AR7000
Feb 1999 - Radio Shack PRO-2066 mobile Trunktracker
Mar 1999 - ICOM RS-8500 software for controlling the IC-R8500
Apr 1999 - ICOM IC-R2 portable scanner |
Jun 1999 - Mini-Circuits ZFSC-4-1 4-way passive splitter |
Jul 1999 - Racing Electronics RE2000 portable |

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

ALINCO

DJ-X10T: 1998 vintage. Rugged construction - metal back. Multimode frequency coverage 0.1 to 2000 MHz (minus cellular bands). 20 selectable step sizes from 0.05 to 500 kHz. Knob atop the radio clicks when rotated and serves as a VFO knob, channel selector, and menu navigation control. Several battery pack options for NiCd and alkaline battery cases. Furnished with an EBP-37N 4.8 V, 700 mAH NiCd pack and a sturdy 11 hour drop in charging stand. Loaded with firmware features and complicated to use. Two VFOs and 1200 channels in 30 banks of 40 channels each. Memory banks are cryptically designated, though you can scan combinations of banks. Each memory channel can be programmed with the frequency, an 8 character label, attenuator, a skip (lockout) flag, and mode (WFM, NFM, AM, USB, LSB, CW, AUTO). Very slow 6 ch/sec scan rate. Rescan delay is about 1 second and cannot be disabled or changed. Auto Memory Write stores up to 40 frequencies but does not check for dupes. 20 linkable search banks with labels. Up to 50 frequencies per search bank can be locked out. Digital clock with on/off timer. Battery saver can be disabled. Ability to scan or search for signals above a selectable threshold or channels with a specific mode. Band scope 7 or 40 steps wide. In short, 30 - 1000 MHz sensitivity is good, few birdies and little intermod. WFM broadcast reception very good. The DJ-X10T squelch can be set to one of 10 levels. We had to keep the squelch set to SQ3 or higher, otherwise it opens at inappropriate times, especially when the battery saver is active. The DJ-X10T instruction manual does not specify the IF (intermediate frequency) scheme. Filters inside the DJ-X10T imply 0.455, 10.7, and 45 MHz IFs. Our tests indicate a first IF of 736.25 or 275.45 MHz, depending on the frequency to which the DJ-X10T is tuned. Our DJ-X10T hears images of cellular phone signals clearly in the 1419.9

- 1444.9 MHz range, 550.9 MHz above their actual frequency. For a full review, including technical test results, see Monitoring Times, November 1998.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

AR8200: 1998 vintage. S/N 550004 tested. Portable, high end "super" scanner covers 0.1 - 2040 MHz (minus cellular in USA version). Not a scanner for beginners. Many of the settings are made through the use of menus. Lots of features. 4 AA batteries, steel belt clip, plug-in AM antenna. 1,000 conventional channels in 20 banks, 10 temporary channels, one priority channel. Each memory channel may be programmed with frequency, label, mode, step, step-adjust, offset, attenuator enable, noise limiter, AFC, and write protect. Multi bank scanning. You can enable a 0 - 9 second rescan delay with each scan group, but not per channel. 40 pairs of search limits with labels. Offset capability for monitoring repeater input frequency. LCD display easy to read. Display and keypad backlit using green LEDs. The band scope. Shortwave reception stone deaf

on shortwave when fitted with the supplied antenna or a 19" whip. Seriously overloaded on shortwave by a 132 foot long dipole unless we use the built-in attenuator. Supplied "dorsal fin" antenna for AM BCB. Scans slowly (14 channels/s). Requires more current. Audio quality is slightly above other portable scanners. Computer port. One slot for a single plug-in option: voice inversion descrambler, CTCSS search, 256 frequency tone eliminator, voice recorder and playback, or extended (slow) memory. See AOR AR8200 review by Bob Parnass,in Monitoring Times, October 1998, for review with quantitative test results.

ICOM

IC-R10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on

conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob

Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized

service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact.

Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz

channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted

8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10

channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative

test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent

leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range. IF frequencies are specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-91: 1998 vintage. Portable made by Uniden for Radio Shack. 150 channels in 5 banks. Can selectively follow conversations in 800 MHz Motorola trunked radio systems. Censors 823.975 - 823.95 and 894.0125 - 896.1 MHz covered by the BC235XLT. Powered by four individual AA alkaline or NiCd batteries. Power save feature. Program key. One priority channel/bank. One search bank. Direct search. Service search omits many police freqs (inc. 460 - 460.5 MHz). While connected to an outdoor antenna, our PRO-91 experiences intermodulation interference in the 161 MHz range from a paging transmitter on 158.1 MHz. IFs near 380.7, 10.85 and 0.450 MHz. See PRO-91 review by Bob Parnass, in Monitoring Times, December 1998, for review with quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass,

AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz.

Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search. No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search

limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. IFs (in MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, and 0.455. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no

scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X		no	
FR105	6	X		no	
FR2512	24	X		no	
FR2513	24	X		no	
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes
FR2526	10	X	X	yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been

replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard

or $34.95 for deluxe RadioMap report with histogram.
Include your name, address, and telephone number, along with
center location (nearest intersection of 2 streets, or
latitude & longitude) and mail to: Bob Parnass, 2350 Douglas
Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central
time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each,
but you must know the patent number. Credit card orders are
taken over the telephone by the Assistant Commissioner for
Patents at (703)305-4350. Alternatively, you can mail a
check or money order, made payable to "The Assistant
Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark
Office, call their automated information message system
toll-free at (800)786-9199.

There are various patent servers on the world wide web,
including IBM's server:

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1999 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation sells crystals, antennas, power cords, owner's manuals ($11 ea) for some older (pre-Uniden) Bearcat scanners. Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553. You can also download an electronic copy of the user manual for recent Bearcat models from the Uniden web site:

http://www.uniden.com/docs/service/support.htm

Some schematic diagrams may be obtained from Uniden's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and

2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Matt Roberds fixed a BC220 which experienced memory loss if power was removed by resoldering the positive wire to 2-AA battery holder.

As built, the BC220 logic board is grounded only through its mounting screws. In the BC220, Matt recommends adding real wire ground jumpers from the main board to the feature (logic) board to fix grounding problems.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig replaced a 22uF/35V C98 capacitor to repair his BC210XW.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of

a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Matt Roberds repaired the Montgomery Wards version of a BC220 and contributed these insights:

"I did add some heat-sinks, but you have to be careful what you do with the TIP29 on the logic board. I added a long, flat heatsink to it and immediately created a whine in the audio. I didn't use an insulator, as this was a temporary first-try. As far as I can tell, the heatsink was radiating noise from the logic board into the front end on the radio board, which ended up being just below the heatsink. Bypassing the TIP29 (a voltage regulator) with disc ceramics didn't work; using a smaller heatsink and an insulator fixed the problem."

"There is also a 220 ohm 1/4 watt resistor on the logic board. It feeds the TIP29 from the main +16v supply. It looked a little crispy. I pulled one end and measured the current through it and it was about 30-35 mA. This works out to right at 0.2-0.25 watt dissipation. I didn't have a higher-wattage resistor, so I substituted 2 470-ohm resistors in parallel."

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to

switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855. email rlassoc@inav.net

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

HAMFEST/COMPUTERFEST CALENDAR 1999 - NORTHERN ILLINOIS
last updated May 10, 1999

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, Tom Harker, and ARRL for providing some of the information.

JUNE 1999

Jun 6 (Sun), Princeton, IL - Starved Rock RC. Bureau County Fairgrounds. Exit 56 from I-80. Admission $6 at gate. Talk-in 146.955, -600, PL103.5 Hz. info: Frank Carraro, KF9NZ, PO Box 198, Leonore, IL 61332/ 815-856-3773. http://www.qsl.net/w9mks/ E-mail: w9mks@qsl.net. (Usually an excellent hamfest. Unlimited space outdoor flea market, some indoor space, though few big name commercial vendors. Crude restroom facilities. - AJ9S)

Jun 13 (Sun), Wheaton, IL - Dupage County Fairgrounds. Six Meter Club of Chicago. Gates open 7 AM, buildings 8 AM. Tickets $6 at the gate. No booze. Recorded InfoLine: 312-442-4961. VE testing 9 - 11 AM only. Call InfoLine to preregister for testing. info: Joseph Gutwein, WA9RIJ, 7109 Blackburn Ave., Downers Grove, IL 60516-3925. tel. 630-963-4922.

Jun 13 (Sun), Orland Park, IL Giant Computer Show & Sale (see below). orland Park Civic Center.

JULY 1999

Jul 11 (Sun), Peotone, IL. Kankakee Area Radio Society. Will County fairgrounds. Admission $5 at the gate. Take I-57 to Peotone Exit 327 (east). 146.94 MHz (-600) talk-in. info: Don Kerouac, K9NR, 6311 East Flora St., Kankakee, IL 60901. tel. 815-939-7548, E-mail: k9nr@juno.com. http://www.geocities.com/capecanaveral/hangar/5711 For Reserved Tables and Advanced Tickets, send check (payable to KARS) and S.A.S.E. to: CHIP MOORE, K9IOC, 289 S. Euclid Ave. Bradley, IL 60915, E-Mail: chipm@megsinet.net or to BILL DESALVO, W9OQW, 403 Birch Dr., Shorewood, IL 60431. 815-744-5099.

Jul 18 (Sun), Sugar Grove, IL. Fox River Radio League. Waubonsee Community College. For tables, tickets, and information: contact N9UZC James E. Von Olnhausen, n9uzc@amsat.org, (630)-879-3042, FRRL, Box 673, Batavia, IL 60510-0673. http://www.frrl.org/hamfest.html (good, small to midsized hamfest. Easy parking. Modern restroom facilities. - AJ9S)

AUGUST 1999

Aug 7 (Sat) - Quincy, IL. Western Illinois Amateur Radio Club Ham Radio and Computer SWAPFEST 1999. 8:00AM to 2:00PM. The Eagles Alps Grounds (3737 North 5th Street) 4.5 miles north of downtown Quincy with easy access from US Highway 24. Admission $3.00 at the Gate ($2.50 in advance) per person, under 12 - Free. ARRL VEC testing for all license classes at 12:30PM. Indoor Flea Market space available for $5.00 which includes one 5' table. Outdoor tailgating space - Free. Talk-in on 147.63/147.03 MHz. Plenty of convenient parking available. Lunch will be served on the grounds. Children's playground area. For additional information contact N9JF, jfunk@adams.net

Aug 8 (Sun), Peotone, IL - Hamfesters Radio Club. Will County fairgrounds. info: Dave Brasel, NF9N, 6933 West 110th St., Worth, IL 60482. E-mail: nf9n@aol.com. tel. 708-448-0580 (Usually an excellent hamfest - AJ9S).

Aug 14 (Sat), Wheaton, IL - Giant Computer show (see below). Dupage County Fairgrounds.

Aug 29 (Sun), Woodstock, IL. Tri-County Radio Group. McHenry County fairgrounds. Talk-in: 146.52 Simplex. info: Bob Grosse, N9KXG, PO Box 3107, Skokie, IL 60077-6107 E-mail: tcrg@hotmail.com, http://quality-enterprises.com/tcrg/. Tickets: Advance With Double Stub $4.00 - At Gate $5.00 Single Stub - $6.00 With Double Stub . Exhibit Building: 8:00 A.M. - 3:00 P.M. Table Rental: $14.00 For 8' Table. Flea Market: 6:00 A.M. - 3:00 P.M. No Additional Charge For Flea Market Space Info (708) 944-0500. Fax (847) 658-1678. (fairly good, small to mid sized hamfest - AJ9S).

SEPTEMBER 1999

Sept 25, 26 (Sat & Sun), Grayslake, IL Chicago FM Club. Lake County fairgrounds. info: Mike Brost, WA9FTS, 5127 North Monterey Ave., Norridge, IL 60656-3245. tel. 708-457-0966 (the biggest and best hamfest in northern IL - AJ9S)

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held on designated Saturdays from 9:30 AM to 3:00 PM. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, etc. Lake County Fairgrounds, Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall Building #1=9720,000 sq. feet. For a show map, exhibitor info, and discount coupon, visit the web site at http://www.ccxpo.com.

It was the PRO-91. The PRO 90 lists for $299 normally, and when it goes on sale it usually sells for $249 I think.... not sure.

http://www.neudecker.org/~macham

Macintosh Owners - There is a Call Sign database made just for you. Not a copy of a PC program but a program made on the Macintosh for the Macintosh.

MacHam is CD-ROM based and sells for $30 (includes shipping in the USA and local tax if needed).

MacHam will run on any macintosh with a 68020 or better processor and a CDROM drive and 10megs of RAM.

Free Downloadable Demo Available

For details visit

http://www.neudecker.org/~macham

4947. Using BC895XLT as Cross-Band Repeater

Newsgroup: rec.radio.scanner
Date: 1999-06-16 00:00:00 UTC
From: kt4ht@aol.com
Message-ID: <19990616162454.25677.00000489@ng-cg1.aol.com>
Source record: 115263

Anyone ever use the BC895XLT to make a one-waycross-band repeater? I figure that you can transmit using an HT to the BC895XLT, then use the AUX jack relay to key another 2 meter rig, and the line-out to the rig's audio input.

As long as you are in receiving range of a repeater, and transmit range of the BC895XLT, this should work.

Anyone ever try this?

Hi,

Are you also spending a lot of time typing over those frequencies from websites to get them in your database or radiocontrol software. Stop typing...

A new program called "WebCatcher" will make things much easier. WebCatcher will scan any website and filter out all frequencies shown on that website. The result is available at the Windows Clipboard so you can export to any Wordprocessor, Spreadsheet, Database or radio control software that supports the clipboard. Both IE and Netscape are supported.

Check it out (with demo) at:

http://www.geocities.com/SiliconValley/Horizon/9163/impdata.html

I use a program called ARC8200. It does not have sound recording option but can log data and has a nice spectrum analyser option.

And the memory manager is just splendid. The software is easy to use and has a natural touch with very clever options..

Site with info is and demo:

I need a scanner to help pass the time. I do not mean to poor mouth but
I have chronic kidney failure and several other health problems that
prevent me from working or even getting out of the house. I had a
scanner and it has quit, miss it very bad. I just don't have the money
to replace it, just a fact I am not proud of but the truth. Anyone who
has a old scanner that still works and you don't use it anymore could
make a old disable person very happy if you wanted to send it to me.
Thanks and God bless you all.

Dennis,

In light of your condition, you might have better luck getting a local comm
shop to donate the time needed to repair the old one. Worth a try.

Also call around to the various pawn shops and thrift stores in your area.
You might be surprised to hear how cheaply some of them will sell a scanner,
and most will let you haggle the price a bit...

Good luck,
-Phil

>it's small. Mine weighed less than 7 pounds.

I have one of these, and love it. It is nice & small. It has a floppy drive that plugs into the PCMCIA slot. I also use a mouse connected to the serial port, which is much easier to use than the trackball. You are right, the trackball is particularly bad about skipping when it gets dirty, which is one reason I got a serial mouse for it. Luckily, the software is set up to detect the mouse, if not there it uses the trackball. I wish the screen were color instead of monochrome, but it does the job I use it for. BTW, mine's not for sale.

A friend of mine works at LAPD as a civilian volunteer. His duties usually involve answering the phone, and as a result, he usually handles calls from any of 3 different "Laser Ladies" who claim that the police helicopter is shining laser beams thru their homes and bodies, and the "F--k You" lady who calls once a day to ask for an officer by name, then tell that officer "f--k you" and hang up.

What a wonderful world we live in.... ;-)

Aw jeeez. Here he goes with that mental "metalic tool" bit again. You'll get used to this bit after a while. Loony boy starts ranting every now and then about this "metalic tool" bit like it'll bring western civilization to its knees or something.

He read it in his Police Call book and he's been ranting and raving about it for years. Totally loony. Goes off on this obscure reference over and over and over and over: "SQUAWK!!!.....mETALIC tOol!.....SQUAWK!...RF OsCIllator......SQUAWK!!!!!". It used to be funny. But after you see him go into this "fit" about 20 or 30 times, you just shake your head.

Mackey's a friggin' loon.

> > Detractors with chips on their shoulders - for whatever

I have a regular Pro-26 and it tunes just fine between 512 and 518. Where did you get your info. It is wrong. It is cell blocked but you can buy a European CPU chip, install it and you have total coverage from 25 to 1300 Mhz with no gaps at all. The CPU chip is 100 pins and requires special equipment and knowledge to install but there are places that will do it for you. The chip alone is $60. The area between 520 and 760 is largely UHF TV stations and you can receive their sound. Some military aircraft here too and wireless mics. I like my Pro-26 and Pro-2045 both better than my old 2006 because of features. The "data" feature is reallly nice. If data and not voice is on a freq. it just skips through it and doesn't lock on and make you listen to all the racket. The 2006 is the least sensitive of all those mentioned. They are all triple conversion units and if you want more sensitivity, try a dual conversion but you will get more intermod.

My personal favorite is the "Monitenna" by Channel Master. I have owned nearly every reputable discone and active type (Diamond) antenna around and have found that the Monitenna offers the highest gain from 27-1000mhz PERIOD. The fact it is only $50.00 with 50ft of 100% shielded RG-6 is a real bonus. You can spend more and you will only get less. I got mine form Scanners Unlimited in San Carlos, CA. (650) 573-1624

I've had one for 6 or 8 months and it works very well. But be aware
that at some point in time, Uniden is likely to announce the 895
replacement. I.E., they have already announced the 245, the next
generation trunk tracking handheld (replaces the 235). So the 895 is
ripe for replacement. The question is, when?

I once saw a hand held radio by either Icom or Yeasu that would easliy tx
from 2m to at least 470, continiously . The guy used it as an extended
garage door opener. , If I remember correctly, he could tx around 300 mhz.

>what does "aided" mean?
>As in "the aided doesn't want to press charges." Is it just the opposite of
>"suspect,"

"Aided" is an injured person. It could be the complainant or the perp. The term is probably derived from "first aid". Also, a card that the officer must fill out if someone needs EMS or hospitalization is called an "aided" card.

In last week's issue of TIME magazine, in the back of the mag is an ad for an "All Hazards Alert Radio." It receives the standard NOAA freqs but also claims to receive FEMA and disaster freqs. My questions are:

Which freqs does FEMA use that I could monitor for "alert" purposes?

Anyone know what else this radio scans for?

THANKS!

Oregon DMV Records

DMV is required by Oregon law to maintain vehicle and driver records.
These records are considered public records and are available by
making a request and paying a fee.

However, there are some circumstances where certain information
contained in DMV records cannot be disclosed.

This does not mean that DMV records are no longer available to the
public. DMV records are available with or without personal information.
Only the personal information contained in the record is protected.
Customers can still obtain records even if they don't qualify for
personal information, but the records they receive will be "sanitized"
to remove all personal information other than their own.

Any customer can purchase a sanitized record.

Oregon's Privacy Law

On September 13, 1997 Oregon's Record Privacy Law went into effect.
The purpose of the law is to make personal information contained in
DMV records private.

This protects Oregon citizens from having personal information in their
DMV records given out to individuals not authorized to receive it.

Personal Information is:

1.Driver license, driver permit, or identification card number
2.Name

3.Address
4.Telephone Number

What Records Are Available From DMV?
Please see the Fee Schedule for a list of records provided by DMV
and their fees.

How a Customer Can Order a Sanitized Record From DMV Headquarters

Customers can order a sanitized record from DMV Headquarters.
Sanitized records do not contain personal information unless the
person making the request is requesting their own information.

When you send in a written request for a sanitized record, you must
indicate the type of record you are requesting, where to send the
record, make a note in the request that you understand that the
personal information contained in the record will be omitted,
and enclose the correct fee.

You must include enough information in your request for DMV to
identify the correct record. This includes VIN number,
license plate number, and owner information for vehicle records;
and name, date of birth, address, and drivers license number for
driver records.

The request can be mailed to:
DMV Headquarters,
Attn: Record Services,
1905 Lana Ave. NE,
Salem, OR, 97314.

How a Customer Can Order Their Own Record From DMV Headquarters

Customers can request their own records from DMV. If you are
requesting a record that contains another person's personal
information as well as your personal information, (such as a vehicle
title history) your personal information will be included,
but the other person's will not. Remember that you must qualify
for personal information, and if you do not, records are sent
without personal information.

When ordering your own record from DMV headquarters, you must indicate
the type of record you are requesting, enclose the correct fee,
and include enough information in your request for DMV to identify
the correct record.

Requests For Records Containing Personal Information

Records containing personal information may be ordered using an
Request for Information Form.

Entities who are eligible to receive personal information must submit
a request to DMV Headquarters and must qualify each time information
is requested. This is done by completing a Request For Information Form,

submitting any required documentation proving that you qualify for
personal information, and enclosing the record fee.

Please call Customer Assistance at 503-945-5000 with any questions
regarding a Request For Information Form.

http://www.odot.state.or.us/dmv/records.htm

http://www.odot.state.or.us/dmv/index.html

John Mackey rents a Post Office Box. You can now obtain the
address for John Mackey's residence:

Subject: US Postal Service March 25, 1999 Postal Bulletin # 21994
"Commercial Mail Receiving Agency Mail (CMRA) Delivery Procedures
Revised.

Issue: On June 24, 1999 two million US Citizens who receive their mail
at a CMRA will be forced to provide, to both the CMRA and the
US Postal Service, significant private personal information or choose
to forgo their Rights to receive mail delivery.

If the box holder is using the address for doing business these
regulations authorize the disclosure of box holders'
"personal information" to anyone who asks for it,
not just law enforcement, not someone with a warrant,
* but anyone who asks for it!

* This information includes the personï¿½s home address, phone number
and ID data.

Prior to October 24, 1999 two million Citizens will be forced
to notify everyone that may ever send them mail in the future that
all future mail MUST be addressed using a "PMB" designator in front
of the CMRA customerï¿½s box number.

This designator must be on a separate line. If the mail does not have
the correct designator the Postal Service will refuse to deliver the
mail!

Why these regulations MUST be overturned immediately!

1) These regulations put millions of people in physical danger.
Stalkers can now easily find their victims.
Any businessperson can be harassed or worse, attacked at their family
home.

2) These regulations violate the "privacy" of millions of American.

On June 24, millions of Americans are forced to surrender their
Private Information.

This includes the copying of a picture ID and a "Traceable Number" ID.

Employees of both the CMRA and Postal Service will have access to
private data.

The USPS is forcing CMRAs to collect data that the USPS is forbid
from collecting.

5) These regulations are illegal.
Violate the Privacy Act, Postal Service Privacy Regulations (39

8) Who do these regulations hurt most?
Law abiding citizens who will be forced to relinquish their Rights
to privacy.
and Stalking Victims.

Identity theft criminals now have unprecedented access to private data.

10) Will the CMRA or the USPS be liable when;

A stalker attacks his victim after getting information from a CMRA?

Thousands of identities are cloned when personal records are stolen
en-mass.

"Commercial Mail Receiving Agency Mail (CMRA) Delivery Procedures
Revised:

http://www.postalwatch.org/points.htm

15.Why must the CMRAs supply quarterly lists of customers?

We do not believe a quarterly list is unduly burdensome to CMRAs.
We eliminated the requirement for CMRAs to immediately notify the
Postal Service of customers who have terminated their relationships,
and believe a quarterly basis will allow us to adequately monitor
CMRA compliance and to determine potential fraudulent activity.

The annual submission of the updated list of CMRA customers is
inadequate because the average customer turnover rate at CMRAs is
significant and recurrent.

16.What will happen to the CMRAs and how will the USPS enforce
it if the CMRAs:

Do not verify two forms of photo ids?

The local postmaster has the authority to suspend mail delivery to
a CMRA if it is not in full compliance with postal regulations.
The postmaster must notify the CMRA in writing of violations and
allow the CMRA reasonable time to comply. If the CMRA fails to comply,
the postmaster, with concurrence from a higher levelauthority,
will suspend mail delivery.

20.Are national credit cards and birth certificates considered
valid identification?

As stated on PS Form 1583, two types of identification are required, one must contain a photograph of the addressee(s). Acceptable means of identification include: driver's license; armed forces, government or recognized corporate identification card; passport or alien registration card or other credential showing the applicant's signature and a serial number or similar information that is traceable to the bearer. Other credentials considered valid identification include:

lease agreements, mortgage, deed, voter registration card or university identification. These forms of identification would have at least a name,
address, and in some instances a photo. Credit cards, birth certificates,
or social security cards do not contain enough information to confirm a person's identity.

What all of this means is that, if you can't get John Mackey's Residence address from the DMV, you can get John Mackey's address And SOCIAL SECURITY NUMBER from the United States Postal Service (USPS) or from the company that operates John Mackey's Post Office Box(CMRA)

http://www.usps.gov/feedback/cmra_faq.htm

Stalking the stalkers is now Fun and Games, thanks to the United States Postal Service! Have You gone POSTAL lately?!

See my response to your comment about sensitive info given out over
wireless phones. However, since the cordless and cell bands don't have
the "radio police" that are so prevalent on the ham bands, the chances
of someone trying to DF my cellular conversation are slim to none.
Besides, they would have to hear the weak .6 watt signal from my
flip-phone in order to DF me.
>> Equipment costs
>>are MUCH lower with cellular, especially with all the "free phone"
>>deals out there.

>for purposes of communication. And as such, comm's on cellular as just as
>susceptible to reception and "eavesdropping" as any other radio service, all
>U.S. laws from the cellular industry lobbyists to the contrary.
>Mike

You're not telling me anything I don't already know. I am a licensed ham, but I no longer use that service because I prefer cellular and FRS. I never said that cellular conversations were secure from eavesdropping. If you read my original post more carefully you would see why I said cellular is more private than ham and CB. The most obvious reason is the lack of a callsign that people can use to identify you (and get your home address if you don't have a P.O. box).

By the way, I think the ECPA and the TDDRA are a load of crap, and I don't like the CTIA's lies about privacy either, so don't think I'm on the side of Congre$$ or the cellular providers. After all, I make sure they don't get rich off me because I never use any more than the 20 free peak time minutes every month, and I can talk for free during off-peak hours and weekends.

It's probably one of the new "digital" weather alert radios that can receive
any sort of hazard warning broadcast over NOAA frequencies as part of the
nationwide Emergency Alert System (EAS).

5002. iCOM R2 opinions

Newsgroup: rec.radio.scanner
Date: 1999-06-16 00:00:00 UTC
From: jlogo@NOSPAM.zipworld.com.au
Message-ID: <3767aa4e.116550000@news.zipworld.com.au>
Source record: 115332

I have been looking to upgrade from my UBC3000XLT scanner to something with a wider frequency coverage and smaller size. From reviews I have read (On strongsignals and other www sites), the iCOM R2 looks like a good choice. My only immediate concerns with this scanner are its apparent (from observation) slow scanning speed and cumbersome operation. Would anyone like to comment on how they find their iCOM R2's performance, particularly in the areas of sensitivity, usability and value for money.

After having purchased the latest edition of "Police Call" I've decided to look for a good frequency reference on CD-ROM. I've noticed that there are several "brands" out there, including CD-ROMs by Mr. Scanner, Grove Enterprises, Betty Bearcat and some others.

Has anyone done a comparison of these? Which one is the best for general scanner frequencies?

Thanks for the info.

From: Dunn's Chophouse <desiredusernamenetma@my-deja.com>
Message-ID: <7k8g8t$ne0$1@nnrp1.deja.com>
Source record: 115335

I just bought a Radio Shack freq counter. The salesman demonstrated it by holding an FRS xcvr next to it and transmiting. I thought that if I connected it to my Scantenna, it might catch some nearby signals, but it did not, that I could tell. (A couple of frequencies were briefly displayed in the 120-170 Mhz range, but the unit would not hold them.) I'll try to use a broadband amp as a next step, but maybe I'm wasting my time in that the counter is for close work (in the range of meters) exclusively. Any comments?

I would like to install a scanner in my truck, and I am interested in which type of antenna to buy based on other experiences...I'm either going with a glass mount antenna or I will use the am/fm radio antenna w/ the coupler. How do these antennas do for reception? Any help would be appreciated...Thanks.

5008. Decent AR8200 Software

Newsgroup: rec.radio.scanner
Date: 1999-06-16 00:00:00 UTC
From: Neal Bedwell <neal.bedwell@virgin.net>
Message-ID: <7k8lgu$se9$1@nclient5-gui.server.virgin.net>
Source record: 115338
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner

Greetings All

I have just bought an AR8200. I am very pleased with the radio itself but, like many others from the sound of it, I am disappointed in the software supplied for it by AOR.

Has anyone had any experiences of using the AR8200 with alternative [preferably better !] software?. I am particularly interested in a facility which would allow automatic, unattended frequency searches resulting in not only the active frequencies being noted for later recall, but several seconds of audio from each transmission automatically recorded also. I know that AOR's own software claims to posses this feature, but it is far too unreliable, crashing my computer regularly. I really need something that is stable enough to be able to leave on for a day or two unattended and then playback all activity over that time period.

Can anyone recommend any good software for this. Overall "whistles and bells" are not important as long as it has the above feature and, most important of all it is *reliable*. Price is not too much of an issue as long as the software is good enough to be worth the money.

Many thanks for any advice anyone can offer.
(Please respond by email if possible).

Regards

Neal Bedwell

I have the following Radio, and electronic equipment for sale. Will consider trades for other Electronic or computer related EQ. All working last time tested unless noted. Shipping is extra. Please reply to my email address. Thanks
EJ (KC5EPI)

All Tube Items:

Tempo-1: All Tube Ham Transceiver with Power Supply. Covers 80-10 meters. Looks good and works well. $200. Will trade for a Pro 2004,5 or 6 scanner.

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobile power cord and mounting bracket. Looks and works Good. $100. Willing to trade for a Siltronix 1011C or D in good condiction.

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM only. AM not working. $125. Willing to trade for an 800 cell ready scanner.

Non Tube Items:

Marantz Model 2220B: 25 year old Stereophonic Receiver, with gyro-touch tuning, blue dial and optional real wood case. This unit is in excellent condition, both in looks and operation I would rate a 9.7. Also have original manual, in excellent condition. $250. Will trade for a Pro 2006 Scanner.

AR Inc: Stereo Amp, All solid state. $100

Traynor: Group Two B- Audio Amp Head. High/ Low misc. in puts. Master volume, volume, bass, treble and tone shaper controls. All solid state $125

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. As is $50.

Siltronix Model 90-6 VFO: Excellent condition with three position crystal switch $75.

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) Digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $150 for both or trade for portable 800 scanner that can receive Cell. Will trade for a Pro 2004, 5 0r 6.

Bearcat 250 Scanner: Have two. One working at times and one for parts. $50 for both.

<<<<SNIP>>>>

--
I use a handheld and a base at home both Uniden and the handheld picks up
better than the table top model, both using an outside discone antenna.

The only way a table top model would give better reception than the handheld is
because they usally have a better stock antenna than the handheld's "rubber
duck"!!

Best reception would be with something other than a RS!

Operating a scanner near a commuter is no problem as long as the commuter
doesn't work maintenance for the 3 Mile Island power station!

Message-ID: <376993C8.FB22E384@worldnet.att.net>
Source record: 115154

Does anyone know whether or not a radio tape recorder that will turn itself on and off based on a pre-set clock? It would be best if it had auto-reverse, also.
Using this, it would be possible to put a 60 minute program on tape at any hour of the day or night. Strange as it may seem, I can't locate a source for such an instrument.

Can anyone help?

I've tried a few of the ones available and I also use the ARC8200. It's currently $75 but in my opinion was well worth it. I think you'll get at least $75 more worth of use from the radio.

The author is very responsive in fixing and adding features. If you can part with the $75, go for it.

Why not use a VCR? It's got a clock and can record up to 6 hours.

Interesting ethical paradox...

Consider this:

Cell calls are almost certainly going to be someone you don't know -
complete anonymity.

Cordless (freqs you mention below) are usually people who live near you and
that you probably know.

I would postulate that, in general, you would be more sleazy listening to
the frequencies you suggest.

C W wrote in message <2813-3761E9AD-105@newsd-123.bryant.webtv.net>...
Hi All,

I just have to ask why anyone would want to listen too a cell
communication?

1. they suck !!!!
2. They Suck !!!!!
3. THEY SUCK !!!!!!

Can anyone add to my list ?

Save your money if you have to listen to someone talk on a phone try
43,44,46,49, Mhz.

I mentioned in another post that if money is not an object then your only choice should be ARC8200. It's $75 and for me was worth it. It's quality code and the author is responsive to fixes and also enhancements. Also, there are some usability features that don't exist in the other ones that make bank management much easier (like autofill, rich cut and paste support (e.g. you don't just cut and paste text - you cut and paste the whole channel object. You can copy the entire bank table and paste into Excel etc.)) He seems to have gotten most things right. Another example: When you save a bank to a file in some of the other programs, the bank letter is saved with it. You have to do gymnastics with the file if you want to upload to a different bank at a later time. With ARC8200, you specify the bank at upload time so can put it where you want.

That just names a few of my pet things. You'll probably have your own. One catch is this: I think this software shines the more you actually use it to manage your radio. The demo version probably doesn't let you really use it enough to live with it and get a full sense of the benefit. I basically took the good press, combined with some basic playing around and punted the $75 hoping it would be worth it. For me, I found it was.

After coming off of a terrible experience getting completely ripped off for sh*t ADMS software upgrade for my FT-50 from RT Systems and getting completely ignored when I reported obvious non-trivial problems to them several times, I am also refreshed by ARC8200 author's apparent pride in his code and willingness to fix things quickly and accurately.

It's easy to do with a VCR...
Just get a cable with a 1/8" phone plug at one end and an RCA male plug at the other. Connect it at the A/V input on the back of the unit and then set the VCR to record on the A/V channel.

5035. Cable TV: Strong Pager Signals cause interference to Cable Channels.

Newsgroup: rec.radio.scanner
Date: 1999-06-17 00:00:00 UTC
From: JasonK <JasonK@verio.net>
Message-ID: <3769C674.8A8AD6CB@verio.net>
Source record: 115165
Cross-posted to: rec.video.cable-tv,rec.radio.scanner

The source of the herringbone pattern interference is caused
by high power transmitters that broadcast pager signals.

I used to have the same problem with (cable) channel 19,
which has a frequency range from 150-156 MHZ.

I realized that the interfering signal was originating from
Outside of the cable system. I purchased a scanner radio,
and searched between 150-156 MHz and found a
Extremely powerful pager signal broadcasting at 152.540 MHz.

The Cable Ch. 19 Video Carrier is at 151.250 MHz,
and the pattern of the interference matched the pager tones.

What are the frequencies for cable channel 68?

Are there any pager frequencies near Ch. 68?

Locate the pager transmitters in your area, click here:
http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/state_county.hts

Enter your state and county, search the paging and radiotelephone
service, click on WTB Paging Database.

Before the Federal Communications Commission Washington, D.C.

WT Docket No. 99-168

In the Matter of Service Rules for the 746-764 and 776-794 MHz Bands,
and Revisions to Part 27 of theCommission's Rules

Notice of Proposed Rulemaking

Adopted: May 13, 1999; Released : June 3, 1999

Comments Due: July 19, 1999
Reply Comments Due: August 13, 1999

By the Commission:

3. In the Reallocation Report and Order, adopted December 31, 1997,
we implemented the specific spectrum management decisions enacted by
Section 3004 of the Balanced Budget Act of 1997.

We added the Fixed and Mobile allocation to the Broadcasting
allocation in the 746-806 MHz band.

We designated channels 60-62 and 65-67 for commercial use,
and designated channels 63, 64, 68, and 69 for the exclusive
use of public safety.

We also declined to adopt additional protections for low-power TV
and TV translator stations beyond those adopted in the DTV Proceeding.

We stated that no new applications will be considered for the provision
of analog TV service in channels 60-69, but that current applicants,
at a later date, would be afforded an opportunity to amend their
applications to seek channels below 60.

We subsequently denied petitions that sought reconsideration of our
decision to grant no new licenses for TV service on these channels,
and the decision to provide no additional protection to low-power TV
and TV translator stations.
(snip)

read the complete text here:
http://www.fcc.gov/Bureaus/Wireless/Notices/1999/fcc99097.txt

Is the FCC going to reallocate these frequencies used by UHF TV
stations to Public Safety? Can our scanners tune to these frequencies?

5038. Re: Airport Control Tower Monitoring

Newsgroup: rec.radio.scanner
Date: 1999-06-17 00:00:00 UTC
From: Rick Pemble <pemble@earthlink.net>
Message-ID: <7kccd9$4u$1@holly.prod.itd.earthlink.net>
Source record: 115168

Air traffic - tower, departure/arrival control, etc. is simplex, i.e. both parties are on the same frequencies. Understand that the airport is on the ground talking to airplanes up in the air, and the airplanes are talking down to the ground. This means your antenna (and antenna pattern) will make the difference here -- it is easier to be on the ground and hear aircraft than to hear another ground station (tower).

Good rule of thumb for antennas, the higher the better. Determine how far the airport is from your house, and what is in between you (hills, tall buildings, etc). This should get you a good idea on how high your antenna needs to be to 'see' the airport.

Point of reference, I am about 6 miles from Melbourne airport, and my antenna (discone) is up 25 feet. I can hear the air traffic controllers fine, but they are about a medium signal strength -- much less than most approaching aircraft. When I am mobile, I can only hear ATC when I am within about 3-4 miles of the airport (mobile antenna).

cheers

rick

I wasn't going to respond, but....

About 1988 or abouts, one of the electronic magazines had an article
to do aim a laser at a window, and use the interference from the
reflection
to recover audio. In reality, the system worked quite well, IF you put
a
piece of foil tape on the window as a target AND got on the direct
reflected
beam.

This was actually a hobbiest outgrowth of what the Russians did with
microwaves for years at the US embasy in Moscow (in that case by
aiming at a metal shield in a conference room) or near a naval base
in Florida years ago.

On another note, since this WAS from Cleveland....

Years ago a Radio Shack customer had a Model II computer that
kept blowing out cards. The machine would work fine, but kept
blowing cards when it was returned to the customer. Swap the
machine and the new machine would start blowing out. So the tech
went to the customers location. No problem with power. Stumped.
Until the meter probe dropped onto the metal chair and the VOM
went nuts. Turned out that right next door in the next office was a
lab that had some kind of industrial maser setup that was serviced
a while back, right when the problems started. The shielding was
not in place correctly....

The same reason grandma and grandpa used to listen to the telephone party line. I don't need to monitor cell phones. I can go to the mall and just sit there and listen. You'd be surprised what people talk about. Nothing perverted or blackmailable, but it's just interesting to watch people and listen to them. Same goes for cellular calls. Because it's there.

ScannerBase is another option to look at. The cd-rom is free and I
think I paid around 4 bucks for shipping so there is not much to lose
for trying it. Search engine is really easy to use. Unfortunatly records
are over a year old and last I checked they didn't have an updated
version available. Percon is probably the best for the $$, they update
their records monthly.

Does anyone know the RS part number of their 5v relay that replaces
the "Record" relay in a Bearcat BC9000XLT?
Thanks, John.

5049. FS: Icom R7000 Communications Receiver

Source record: 115198

Considered by many to be the top of the line VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Cellular is NOT blocked. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB, AM, NFM & WFM allows reception of most everything you want to listen to. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recording.

IC-R7000 SPECIFICATIONS

Frequency Coverage 25. MHz to 2000 MHz. "with a gap between 1000 MHz & 1025 MHz".
Mode: Upper & Lower Sideband, AM, wide FM, narrow FM
Memory Channels: 99
Tuning Step Increment: - 0.1, 1, 5, 10, 12.5, or 25 kHz.
Power Requirement (U.S.A): 117 Volt AC
Usable Temperature Range: +14ï¿½F ~ +140ï¿½F
Dimensions: 11.3(W) x 4.3(H) x 10.9(D) in
Weight: 17.6 lbs.

The R7000 has (6) seperate scanning functions:
1. Priority Scan
2. Programmed Scan
3. Selected Memory Scan
4. Selected Mode Memory Scan
5. Memory Channel Scan
6. Auto-Write Memory Scan

The receiver comes with the original box and styrafoam packing, and owners manual. I will also throw in the book "The Scanner Listener's Handbook" from Tiare Publications. Everything is in EXCELLENT condition and has been in a non-smoking environment. The radio was hardly ever used, everything in my area has gone trunked so I listen to my bearcat trunktracker instead. So I decided to sell the R7000. Serial number on the radio is "12508".

I'm asking $750 plus shipping cost. If you have any questions I will be very happy to answer them. Contact me at the following.

email --> cozyoak@aol.com
phone --> 503-618-8784 (jim)

In his FAQ about PLECTRON receivers, Bob Parnass wrote:

"If you wish to purchase a new receiver with "Plectron-like"
signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing."

What kills me Bob is that 'Reach' charges so much for these radios!
I mean, I am SURE they are quality sets but they are like $300+ a pop,
and this for a one or two channel radio? Yes, you probably get what
you pay for but I could guarantee this company that if they dropped their
price under $100, people would be grabbing them up faster than they
could make them.

My 2-cents

Older monitors and even some of the new cheaper ones are the
biggest RF noise generators. With your computer system running,
turn off your monitor to see if that is the source. If so, you can
add ferrites to the video cord, check the grounds, and move
your scanner away from the source. My computer controlled
scanner sits on a shelf above my two computers -n- two
monitors. I get very little interference. However, at work I have
a PRO-90 sitting on a window ledge. My computer sits
opposite with my chair in the middle. If I'm not directly sitting
between the monitor and the radio, the scanner occasionally
will stop with lots of white noise. If I move between the
scanner and monitor or turn the monitor off, the noise fully
disappears. The newer scanners have plastic cases rather
than the metal ones of the days past. Another
option would be to buy some adhesive backed RF copper
foil and put it inside the scanner case and attach it to the
scanners ground plane. This would help eliminate RF
interference from entering the case. If you need a source
of this product, I can look up the P/N of the product
we use.

Actually, you can get it from the Post Office in Beaverton. According
to USPS regulations, if someone uses their PO Box to solicit to the
public (and a newsgroup post certainly qualifies), then the
information becomes public record and is available to anyone who asks.

>What a wonderful world we live in.... ;-)

Tell me about it. One of my favorite calls was the drunk guy that called us & said that someone stole his house... That alone would have been funny enough, but a couple days later he called again & said they brought it back....

We had a call from a lady similar to the one who wrote the above post. She claimed that the motel room she was staying in was hazardous to her health because electromagnetic waves were coming from her cable box and her mattress. She said she was suing the CIA and they were after her... in fact she thought the officers we sent down to talk to her were CIA agents because, as she said, "the CIA has been known to infiltrate police departments." I later asked the officers if the CIA pays good money.

Once as a reserve officer, I and another officer transported a man to the local mental hospital. When we pulled in the drive, he started singing "They're Coming to Take Me Away HA HA!" I nearly lost it.

Tom

5066. Re: Radio Shack Frequency Counter - Question

Newsgroup: rec.radio.scanner
Date: 1999-06-17 00:00:00 UTC
From: tandkmoran@aol.com
Message-ID: <19990617050555.28986.00000802@ng-cj1.aol.com>
Source record: 115215

> I just bought a Radio Shack freq counter. The salesman demonstrated it by holding an FRS xcvr next to it and transmiting. I thought that if I connected it to my Scantenna, it might catch some nearby signals, but it did not, that I could tell. (A couple of frequencies were briefly displayed in the 120-170 Mhz range, but the unit would not hold them.) I'll try to use a broadband amp as a next step, but maybe I'm wasting my time in that the counter is for close work (in the range of meters) exclusively. Any comments?

-It's an excellent counter with good performance.

-It doesn't have a "hold" feature, the frequency will remain displayed only as long as the signal is active. Modifications have been published to add a (manually activated) hold button to freeze the display.

-If it's responding to an FRS signal - 1/4 watt maximum - I'd say that's a good sign that the counter is working and is at least reasonably sensitive.

-These things work by responding to the most powerful, local signal it detects over the back round noise level. Using an antenna with some gain in the same band as your target helps, as does reducing the noise level, either by filtering or moving to a rural environment, (or, tip- an underground parking garage or basement for both you and the target).

-Using a higher or more sensitive antenna will help, but yes, these things are designed for "close" work. I have read FM broadcast stations for several miles in rural environments, using a mobile antenna.

-Using either a broadband preamp or a better antenna will also amplify the back round noise level, so this can end up working against you, especially in noisy, urban environments.

-If you are hooked up to the scantenna and a fire engine transmits down the block it should read it. Bigger cities = more radios transmitting = high back round noise level = shorter range. It will respond very poorly to AM signals, like those from aircraft (120-136.975).

-My favorite scenario: "This counter is junk, I want to return it, it won't even read a cordless phone". Cordless phones use 2 transmitters, one in the base and one in the handset. This will confuse the counter. In addition, both are very low power transmitters and hard to read even when just one is on. Remember - the strongest, local signal above the back round noise level is what gets read. If you stand in between two 100 watt transmitters on two different frequencies the counter isn't going to read anything.

-Using the R/S counter I have read 5 watt handheld transmitters from a full city block away (in a rural environment). I have taken that exact same counter to the downtown Chicago lakefront and been unable to read a 5 watt handheld at

20 feet. It's all a matter of backround noise. I have had an opto scout hooked up to mobile antenna in a van and driven through hundreds of small towns. Invaribly, if there is an FM broadcast transmitter in town then that is all the opto will display within a mile or so of the transmitter site. (19 inch mag mount 1/4 wave 2 meter whip antenna).

-I have seen the R/S units outperform Opto's time after time in side by side tests on VHF, UHF and 800 Mhz. No arguing, the optos have more gee whiz features, many of which are very, very useful. I especially like the concealable one that looks like a pager and the opto scout. But if all you want is a sturdy, hot performing counter with a great display and field replaceable batteries the R/S is hard to beat. I got into a lot of flame wars with people over this, others swear their optos outperform the R/S units. I can only speak from my personal experience. I suspect a lot of this is just shack bashing by folks who don't take the time to realize the counter is made by GRE - same folks who built the 2004/2005/2006 radios.

-Dont forget to compare prices either.

```
| A friend of mine works at LAPD as a civilian volunteer. His duties usually
| involve answering the phone, and as a result, he usually handles calls from
| any of 3 different "Laser Ladies" who claim that the police helicopter is
| shining laser beams thru their homes and bodies.
```

See, when people speak, air compresses and expands, which causes windows to vibrate enough to where a sensitive laser and detector can be used to hear what a person is saying inside. Maybe the laser ladies just did a little too much LSD (Figures for LA), or maybe they are onto something.

5068. What are the favorite songs of your local mobile police?

Newsgroup: rec.radio.scanner

I hear alot of music, from Rock and Roll to Kenny G in the background while our local police is talking
on their radio's.
One officer apparently has the 'best of the 80's' CD collection as all day, every day, when he keys up, I always
hear "Oh Mickey", "Don't you Love me Baby" or Gary Numan's "In cars" playing.
What songs do your local police play in their police cars?
Funny as I thought all policemen were backwards jerks who are usualy dumb hicks or tough or militant guys who get their kicks
screwing people over for a living.

I think you will find any glass-mount model a big disappointment for anything but the strongest of local signals.

> or I will use the am/fm radio antenna w/ the coupler.

Keep in mind that you are cutting your signal strength in half (at least).

Most hobbyists are happy with either the Radio Shack magnet mount all-band model (I have two) and the MON/MONR line made by Antenna Specialists (sold by a large number of dealers like Scanners Unlimited and Scanner World.)

5073. Frequencies for Phila., PA Area???

Newsgroup: rec.radio.scanner
Date: 1999-06-17 00:00:00 UTC
From: ral007@voicenet.com
Message-ID: <3768d7a8.1618663@netnews.voicenet.com>
Source record: 115222

My battery in my scanner went dead enough even to lose the programed frequencies.

Any list or WWW site that has the Phila. frequencies would be appreciated.

Thanks in advance.

5074. 900MHz ?

Newsgroup: rec.radio.scanner

From: Rick Sieboldt <lidebt2@ix.netcom.com>
Message-ID: <7kan8o$5e1@dfw-ixnews9.ix.netcom.com>
Source record: 115223

The following was posted to a email list that I belong to and there are ten different answers coming back.

Snip:
A digitized 900 mgh phone CAN NOT be monitored as it is digital just like the digital cell phones on the market, which CAN NOT be monitored. You can find either digital or analog 900 mgh phones on the market. To be sure of total privacy, buy the digitized 900 meg phone.

Is there are legal or illegal way that you can listen with a scanner to a digital 900 MHz phone?

Thanks,

our local police >is talking
>on their radio's.

>What songs do your local police play in their police cars?

Our patrol cars just have standard AM/FM radios, no tape or CD. In a
previous dispatch job at a sheriff's department where things were a little
more relaxed at 3 AM, it was common to hear bits of music come over the
radio anonymously. Especially if it was "I Fought the Law."

>Funny as I thought all policemen were backwards jerks who are usualy dumb
hicks or tough or >militant guys who get their kicks
>screwing people over for a living.

I'm sorry you feel this way. True, there are some jerks out there who love
the power they have. However, one complaint to their supervisor usually
keeps them in line. But most cops are ordinary Joes (and Joann's) that are
trying to make a living doing a hard job.

Nobody loves a cop until a criminal is at the door.

6-16-1999

MIND CONTROL HARASSMENT CASE IN CALIFORNIA

We talk about people undergoing unconscionable Hell at the hands of vicious and perverted criminals who have gotten ahold of mind control equipment! I found an interesting case of one California woman which demonstrates how bad it can get (reprinted below) on the world wide web. It did get that bad (and worse) in my case too. Female victims are invariably raped by these criminal types. Many of the persons getting ahold of this equipment are undoubtedly nothing more than common criminals. Unfortunately, it has gotten so bad that there is no way out except a public information effort followed by a strenuous attempt to ferret out these illegal controllers, developing the best detection efforts which technology and ingenuity allow, and trying to disarm abusive users wherever they might be found. Statutes on law-books and well-prepared police units as well as a psychologically prepared public, who do not deny the existence of the technology, are a necessity to grapple with these criminal elements. Medicating and institutionalizing their victims as the only current solution is like adding insult to injury, as well as a form of unjust character assassination. Medication will help control victims' anxiety, but of what value is this if their tormentors remain at large, waiting to latch onto other prey in a serial fashion, going free as a bird after having inflicted the torments of the damned on their innocent prey, due to public denial that the technology even exists?

I got the article below at the site of Anathema Research at http://www.io.com/~hambone/ (link on "Mind Control Letters" page) --home page of Doc Hambone devoted to para-political, conspiracy, and fringe culture topics, including mind control. There is the uncomplimentary and misleading implication that mind control is only fringe culture. There are postings there which the Doc had to present apologetically, as being too far out, but sandwiched in between these are apparently legitimate beefs like the one below. I found myself represented there too. I am personally completely sincere and have a legitimate gripe. I think the Doc is ultimately filling a very valuable

niche. The open mind is always better than the narrow, closed one when it comes to arriving at Truth. There is the other extreme of gullibility. I guess there is a happy middle course to steer. We live in an age with many amazing technological advances, including the computer I am processing these words on to transmit on an incredible communications network. DARPA originally intended the Internet as a defense nerve network, and it is essentially serving its original purpose now.

In the context of gruesome crimes such as the one delineated below, I have also wondered about the scenario provided in the Abemarf post in the alt.mindcontrol newsgroup: "Coming SOON--the Psycho-Civilized Police State!!!" (author Abemarf, alt.mindcontrol---Friday, May 21, 1999 6:00 AM), in which the crime picture is deliberately intensified as a preface to a military takeover in the guise of restoring social order, using agents provocateurs. It describes a public being conditioned to accept fascism. It starts:

_____
PSYOPS

By Glenn Krawczyk

PO Box 1540 Burleigh Heads, Qld 4220 Australia

In 1994, the Strategic Studies Institute (SSI) of the US Army War College (Carlisle Barracks, Pennsylvania) produced a paper entitled, "The Revolution in Military Affairs and Conflict Short of War"....

_____

You have to wonder why anyone would want to commit some of these senseless crimes to begin with. Hardly anyone believes that there would be any motive to commit some of these cruel acts. One thing that happens to victims is that they are usually fed a lot of bull by their victimizers, and they partly assimilate this in their distraught states. Additionally, what they hear is embellished by the powers of their own runaway imaginations. All of this helps to undermine credibility and distort what really happened.

Well, anyway, what follows is the experience of the California woman I referred to. I didn't edit anything (except for one or two spelling errors). Many victimizers do get quite coarse and sleazy. Mine did also. It is no reflection on the victim's integrity. Cornered victims are trapped. You might as well be stalled in an indefinitely stuck elevator cage with a psychopath. It really wrecks

your quality of life and induces traumatic stress syndrome. After you undergo it, there is the additional stress of being accused as crazy for even making the claim that it happened. Is there anything to the fact that victims seem to cluster around a certain age group (corresponding to a period in history of unusually heavy experimentation)? She is about as old as I am.

There are some interesting words about HAARP, Tesla technology, and the Los Alamos lab (which has been in the news lately).

MICROWAVE TECHNOLOGY HARASSMENT

My name is Tannie Lee Braziel. My WWW site is "Amazon Web World" at http://www.amazonco.com. My personal E-mail address is tbraziel@amazonco.com. I own and operate Amazon Paralegal Services (legalsvc@amazonco.com), 1680 North Vine Street, Suite 214, Hollywood, CA 90028 (Voice: (213) 465-1255; Fax: (213) 465-0937). I am a member of the Hollywood Chamber of Commerce, Hollywood, CA. On March 3, 1996, I sent a letter to the Federal Communications Commission which follows the end of this letter, and discusses the "voices" and other technological harassments that persons unknown to me have employed to abuse me for years.

Finally, in December, 1996, I received a response from the Federal Communications Commission indicating that it does not handle the type of complaint which I presented.

Included among those to whom I sent copies of my letter in March are the U.S. Justice Department, The Federal Bureau of Investigation and the Los Angeles Police Commission.

I also sent a copy to the National Organization of Women; and its then president, Tammy Bruce, invited me to speak on this subject on her radio show on KFI in Los Angeles, California.

On April 13, 1996, I did in fact appear on her show, identifying myself and my business name and location. As a result, several listeners telephoned my office and provided me with facts which established that I am an "involuntary experimentee" of a government-created operation known as "H.A.A.R.P." (High-Frequency Atmospheric Auroral Research Project) which is supposedly based in Alaska, and is used as an electronic mind-control device against American citizens.

I have since gathered much written information regarding "H.A.A.R.P." and other prior mind-control projects such as "MKULTRA", "ARTICHOKE" and "PANDORA" which have been

used by the Central Intelligence Agency against the people of the United States since post-World War II.

I have also located published testimonies of other survivors of electronic mind control in "Whistle Blowers", edited and compiled by Elizabeth Russell-Manning with Cheryl Welsh (Flatland Books, San Francisco, CA; (707) 964-8326; Code No. WHBL).

Recently, I accessed and captured information from the "Up ParaScope" website (http://www.parascope.com) regarding Nikola Tesla, which, when combined with the material already in my possession on him, clarified his important role in the "H.A.A.R.P." Project and other various, and prior, government mind-control projects.

Nikola Tesla was a scientist who began his career work just prior to 1900. He pioneered alternating current, created fluorescent light and the arc lamp, invented the radio and developed the logic circuits used in modern computers. Over 700 patents were registered in his name and he was an important shaper of current technological achievements.

The efforts of his later years included wireless transmission of power, thought recorders, and death rays.

Tesla's main career pursuit was the wireless transmission of energy. He solved the problem that transmission of power through air over long distances would result in a significant loss of energy. Instead of sending energy using air as a medium, he sent energy through the ground, because he found that the ground, if charged highly enough, could become the conductor itself; and the whole earth could be transformed into an electric transmitter.

Some of Tesla's inventions had military applications, among which was automaton technology he used to produce remote-controlled boats and submarines. He hoped for a contract with the U.S. military, but the government refused his offers.

Then, Tesla invented the death ray, a particle accelerator and outgrowth of his magnifying transformer. The death ray focused its energy output into a thin beam so concentrated that it would not scatter, even over great distances.

On the night of June 30, 1908, Tesla tested the death ray while Robert Peary was making his second attempt to reach the North Pole. Tesla notified Peary's expedition that he would contact them, and that they should report to him anything unusual they might witness.

Tesla aimed his death ray across the Atlantic toward the arctic, to a spot which he calculated was west of Peary's expedition.

On June 30, 1908, a massive explosion devastated Tunguska, a remote area of Siberia, destroying 500,000 acres instantly. Audible from 620 miles away, it was the most powerful explosion in human history. Scientists believe it was caused by a meteorite or comet fragment, although no such objects were found. However, it seems obvious that Tesla's death ray had overshot its intended target at the North Pole and destroyed Tunguska.

In 1943, Tesla died in New York City at age 87. The U.S. government, through the Federal Bureau of Investigation, ordered the Office of Alien Property to seize all of Tesla's papers and possessions, although he had been an American citizen since 1891.

Reportedly, in 1957, the Russians were performing Tesla-like technology experiments using microwaves aimed at various U.S. government facilities and personnel; and the Pentagon retaliated with top-secret Tesla-based projects of its own, the most famous of which is the "H.A.A.R.P." Project.

Many scientific researchers believe that "H.A.A.R.P." is a communications and surveillance network and a mass mind-control device.

Mind-control operations utilize "directed-energy technology" described as "non-lethal defense" which targets and attacks human beings with microwave energy for experimentation -- or elimination -- purposes, and includes the capabilities of sending sound analogs ("voices") and mental images, and of reading a person's thoughts through brainwave translation.

The "voices" were conceived in a lightning bolt. In 1956, two geophysicists, Holzer and Deal, noticed that naturally-occurring electromagnetic (EM) signals in the auditory range were tossed off by thunderstorms. With little variation, most of the EM bursts were metered at 25 to 130 cycles per second, with a very low attenuation rate. Therefore, lightning discharges could be picked up anywhere in the world as "magnetic noise" on the ELF radio dial.

Not only does the U.S. government have this technological capability, but private industry does also.

On November 16 and 17, 1993, the Los Alamos National Laboratory, located in Los Alamos, New Mexico, sponsored a secret conference on non-lethal defense at the Columbia Inn in Columbia, Maryland. Invited guests and speakers were,

among others, U.S. Attorney General Janet Reno, "brass" members of the U.S. military branches, and private industry researchers, who discussed various aspects of "directed-energy technology" including "voice synthesis."

Los Alamos National Laboratory (http://www.lanl.gov) is located in northern New Mexico. It is operated by the University of California for the U.S. Department of Energy. It also provides access for other federal agencies to highly specialized or unique facilities, services or technical expertise. The majority of such work is for the U.S. Army, Navy, Air Force and Marines.

Some of the activities of Los Alamos National Laboratory are new technology system assessments, nuclear weapon development, high-energy-density science and applications, atmospheric and near-space environment technology, global change and climate dynamics, bio-science, applications of defense technology to the bio-mechanical modeling of the human body, techniques for non-invasive functional imaging of the human brain, including neuroscience, low-temperature physics, computer science, electrical engineering and state-of-the-art signal processing.

A private industrial firm known as ASM Labs of Marionville, Missouri manufactures a product which it calls the "Mongoose fiber-optic cable system" in which analog audio signals travel as light and, the company claims, are immune from interference.

Further, my research materials indicate that, along with government and private industry, the Los Angeles Police Department -- specifically, its "Special Intelligence Section" also has this technology; and that that department "has an established history of civil and human rights abuses under conspiratorial circumstances."

On August 13, 1991, the Napa Sentinel, of Napa, California, published an article by Harry V. Martin and David Caul which stated that:

"California has been in the forefront of mind-control experimentation. Government experiments also were conducted in the Haight-Ashbury District in San Francisco at the height of the Hippy reign. "In 1974, Senator Sam Erwin -- of Watergate fame -- headed a U.S. Senate Subcommittee on Constitutional Rights studying the subject of 'individual rights and the Federal role in behavior modification.' Though little publicity was given to this committee's investigation, Senator Erwin issued a strong condemnation of the federal role in mind control. That condemnation, however, did not halt mind control experiments -- they just

received more circuitous funding.

"The Department of Health, Education and Welfare and the U.S. Army have admitted mind control experiments. Many deaths have occurred.

"In tracing the steps of government mind control experiments, the trail leads to legal and illegal usages, usage for covert intelligence operations, and experiments on innocent people who were unaware that they were being used."

On November 8, 1991, the Napa Sentinel published another article by Harry V. Martin and David Caul which stated:

"Thirty years ago, Allen Frey [a biophysicist at General Electric's Advanced Electronics Center, Cornell University and a contractor for the Office of Naval Research] discovered that microwaves of 300 to 3,000 megahertz could be 'heard' by people, even if they were deaf, if pulsed at a certain rate. Appearing to be originating just in back of the head, the sound boomed, clicked, hissed or buzzed, depending upon the frequency. Later research has shown that the perception takes place just in front of the ears.
"Walter Reed Army Institute of Research [under the code name "Project PANDORA"] refined the technique so that the microwaves could transmit understandable spoken words. In fact, one of its researchers, Dr. Joseph C. Sharp, was himself the subject of an experiment in which pulsed microwave audiograms, or the microwave analog of the sound vibration of spoken words, were delivered to his brain in such a way that he was able to understand the words that were spoken.

"Military and undercover uses of such a device might include driving a subject crazy with inner voices in order to discredit him, or conveying undetectable instructions to a programmed assassin."

I have learned two important facts from my research data:
1. In 1953, the United States signed the "Nuremberg Code" and pledged with the international community of nations to respect human rights and to prohibit experimentations on captive populations without full and free consent. That same year, the Central Intelligence Agency began its mind-control projects, and, with the U.S. Navy and U.S. Army, targeted specific groups of people for experimentation who were not able to resist -- prisoners, mental patients, foreigners, ethnic minorities, sex deviants, the terminally ill, children and U.S. military personnel and prisoners of war, thus violating the Nuremberg Code.

2. Pursuant to U.S. Executive Order No. 12333, dated December 4, 1981, the national Department of Defense is legislatively prohibited from conducting psychological experiments against U.S. citizens.

Further, I have conceived of three possible adjunctive facts:

1. The "H.A.A.R.P. Project may be based in New Mexico instead of Alaska.

2. The "hum" experienced and complained of by residents of Roswell, New Mexico may be caused by "H.A.A.R.P." activity at Los Alamos National Laboratory.

3. Spontaneous combustion of humans may result from increased body temperature during microwave experimentation.

My life is a struggle both day and night. The men who are participating in this activity against me assault every part of my body with their voices constantly, especially with sexual assault to my private parts. In public restrooms, they even bounce their voices off other women's bodies if I am not in motion. When I touch any part of my body, or an object touches any part of it, or as my clothing moves against it, these men attach to the movement the amplified sounds of their voices, or they employ licking, stroking, vibrating, trembling, grabbing, pushing, rubbing or rustling sensations; or a poking sensation, similar to the touch of a finger or the tip of a tongue; or a pressing sensation, as with a hand. Almost always, they attach the sounds of their voices to any movement that I make, or to any object that I touch, pick up or put down, or handle. Further, they usually "voice-over" my television or radio programs to be sure that I can hear only them.

Often, some part of my body will become very warm, as though a heat lamp is being shined on that part of it.

Occasionally, I feel a blast of energy against the left or the right side of my head, which I believe to be a blast of microwave energy, in that I can feel warm air move against my head in waves, I can hear a loud "wind" sound, and I become extremely dizzy and nauseous.

When I visit a restroom, and when I shower or dress, they assault my private parts, especially between my legs, so intensely, it is as if I am being raped; and I must actually wrestle against the sounds.

Many women in Los Angeles are unaware that while they were at Ballys Health Spa in Hollywood, California, or while they were in a public restroom somewhere, they were spied on, listened to and their bodies were criticized as they

were naked and engaged in intimate feminine activity -- because I was there. It is obvious, of course, that it probably occurs when I'm not there -- and probably occurs everywhere, all the time.

These men tell me that they "own" me and my body, and everything I have; that they have taken away all of my rights and my relationship with Jesus Christ; and that they have sold subscriptions to millions of men who also participate in seeing and hearing me, and bouncing their voices against my body parts.

They tell me, "We've made you into a whore, and it doesn't matter what we do to you." "We're using you as a 'scapegoat' for our sins." "We want you to think we've sold you into slavery." "We want you to do what we tell you to do." "We just want to keep raping you, with nothing you can do about it." "We don't want you to have nothing." "You're not a woman, anyway, you ugly bitch." "I wouldn't do this to an animal -- but you're lower than an animal, you damn dog." "We've never had so much trouble getting rid of a nigger."

"You were the guinea pig for what we could do to other women. We've raped so many other women using sound devices..." "We want you to think it's a pleasure." "We want you to think it's legal." "We're men, and part of your 'punishment' is to be naked in front of millions of men." "You have no idea how much money is involved. I'm an agent for the government and we make up our deficit selling pictures of you, you ugly bitch."

When I pray or read the Bible, they scream blasphemies so loudly, I can hardly maintain my concentration.

I will appreciate any and all assistance you can provide to me in my quest to remove these "voices" and other related harassment from my life.

Please consider that the signals which transmit these "voices" to me may be hidden from normal detection.

Please consider that the frequency at which the signals are sent may be changed from time to time to avoid detection.

Please consider that the signals may be transmitted in GIGAHERTZ instead of MEGAHERTZ.

Finally, please consider also that the signals may not be transmitted through the air, but through the ground.

Thank you for your response.

tbraziel@amazonco.com

From amazon@netcom.com Mon Mar 4 17:45:19 1996 Date: Sun, 3 Mar 1996 15:23:09 -0800 (PST) From: Amazon Paralegal Services Reply to: tbraziel@amazonco.com To: fccinfo@fcc.gov Cc: web@usdoj.gov Subject: Invasion Of Privacy Transmissions My name is Tannie Lee Braziel. I am a 50-year-old black female. My street address is 1680 North Vine Street, Suite 214, Hollywood, California 90028. My telephone number is (213) 465-1255. My fax number is (213) 465-0937. My Internet domain name is "amazonco.com".

I am self-employed at the above address as Amazon Paralegal Services and Amazon Publishing Enterprises, which I have owned and operated since 1986. I have worked in the legal profession as a legal secretary and paralegal since 1968. I am an alumnus of U.C.L.A. (1975) with a bachelor's degree in English.

For approximately the last five (5) years, since 1991, I have been stalked and terrorized electronically, and my civil rights have been violated, by people who broadcast verbal transmissions to me wherever I go, in and out of doors (hereafter referred to as "the voices").

The voices are male and belong to men who see and hear me -- and speak to me -- through the air. They also speak to me through motorized devices, my television, the rustling of my clothing against my body, the sounds of food in my mouth when I eat, running water, any papers I pick up and handle, any door which I or anyone near me closes or slams, and virtually any sound which is made anywhere on me or near me.

Some of the voices belong to white men and some belong to black men. They plague and torture me with constant insults to my person and my race. They blaspheme God, Jesus Christ, and the Holy Spirit. They insult my church, my deceased mother and the rest of my family.

The voices demand that I close down my business. They threaten me with violence to me and my family if I don't do so, or if I expose what they are doing to me.

Furthermore, anyone who is physically near me is subjected to an invasion of their privacy by the same people, which includes the women's locker room of Bally's Holiday Spa in Hollywood, California which I visit daily, and where I have met entertainment personalities, a Los Angeles County deputy district attorney, and a Los Angeles City policewoman.

An even more horrific aspect of these men's intrusion into my life is that, somehow, they can read my mind. They actually speak my thoughts with me as I think them, regardless of the brevity of the thought. They tell me that I "send signals" which they are able to translate into speech and hear.

I believe that these men are using the airwaves by some type of satellite tracking and/or scanning activity which enables them to stalk me and communicate with me constantly. I believe they may be reading my mind through some type of computerized "brainwave-to-speech" translation activity, similar to the "text-to-speech" device and software which I have installed on my own computer.

Sometimes, the voices tell me that they're the police, that they're giving me "police protection" and that they are communicating with me to "keep in contact" with me. Sometimes they claim to be "God".

In California, Penal Code Section 646.9(a) provides that "[a]ny person who willfully, maliciously, and repeatedly follows or harasses another person and who makes a credible threat with the intent to place that person in reasonable fear of his or her safety, or the safety of his or her immediate family, is guilty of the crime of stalking ...."

California Penal Code Section 422 describes terrorist threat as "[a]ny person who willfully threatens to commit a crime which will result in death or great bodily injury to another person, with the specific intent that the statement is to be taken as a threat, even if there is no intent of actually carrying it out ...."

California Penal Code Section 422.6 prohibits any person, whether or not acting under color of law, from using force or threat of force to willfully injure, intimidate, interfere with, oppress or threaten any other person's free exercise or enjoyment of any right or privilege secured by state or U.S. constitutional laws.

My constitutional rights are being violated constantly by these men, including my right to personal privacy. I am dehumanized and degraded constantly by such common acts as bathing or using the toilet.

I have sustained substantial losses of personal property as a result of the mental and emotional abuse which these men have inflicted upon me during the last five years. The day of my mother's funeral on August 27, 1993 will always include the horror of these men's insults of her before she was even laid in her grave. They have vilified her memory on a constant basis ever since then, and even claim that

they have eaten her body.

In light of the recent revelations about Mark Furhrman, a Los Angeles Police Department detective who was involved in the O.J. Simpson case, and his extreme hatred for black people, it has occurred to me that the men who torment me may be policemen who share his opinions.

The voices have told me that "Voorhees" and "Kruger" are names of authority figures involved in the stalking activity against me. Perhaps "Voorhees" and "Kruger" are policemen.

Therefore, I am concerned not only for myself and my family, but for other black people who might be enduring similar experiences, but who are unable or unwilling to seek help. Further, I am concerned that some people may have been injured or killed while trying to avoid or eliminate such electronic intrusions into their lives.

Recently, I heard a female caller on a radio show complain of "noises" which she could hear in her home, and which she thought sounded like "voices."

On October 9, 1995, I watched a television program on UHF Channel 40 ("This Week In Bible Prophecy") which discussed the ability of a satellite to read a newspaper over one's shoulder, the ability to track a person because his "I.D." is attached to a certain frequency, and the ability to monitor by computer.

I am a member of the Church of Christ. I attend the Southside congregation at 1655 W. Manchester, Los Angeles where the minister is my cousin, Carl Baccus.

I am the mother of a 25-year-old daughter who was formerly in the officers training program of the United States Navy until spring, 1995 when she opted for early release.

I can provide numerous personal and business references who will certify my intelligence, integrity and sanity.

I cannot describe here the complete horror of this entire experience, because I cannot communicate the vicious hatred which these men convey to me through their speech and sound effects.

However, I have maintained a "diary" of many of the quotations from these men. Due to the lewd nature of the quotations, I am transmitting them by fax machine directly to Office of Engineering and Technology.

I request your investigation of these transmissions to me so that the persons responsible can be apprehended. I am

desperate to again live my life enjoying the same peace and privacy which is assured to and common to all citizens of the United States of America.

Please respond as soon as possible. Thank you in advance for your courteous attention to this matter.

tbraziel@amazonco.com [INSERTED BELOW ARE SELECTED QUOTATIONS FROM THE "DIARY" MENTIONED ABOVE.]

"White people want you to close down your business."

"You're just a nigger."

"Think I'm God!"

"You're nothing but an animal. It doesn't matter what we do to you."

"We don't want you getting anything out of that life of yours."

"We want you to have nothing for your whole life."

"I don't like the person you are."

"We don't want you to be a Christian. We don't want you praying to God."

"Get out of there. Get out of that office."

"Think I'm the owner of your business."

"We think you're stupid anyway."

"I could just bust your head open."

"I want you listening to 'I am God!' 'til you lose your mind."

"You're the stupidest bitch in the world."

"Black women aren't allowed to have a business like yours, you ugly bitch."

"We don't want you getting up in the world."

"See, Miss Braziel, these cops have it in for you. We want you to close down that business."

"Prisons are full of set-up bitches like you. Those women turn 'em into dikes, and they die and go to hell."

"Chew on your cud, you ugly bitch."

"I'm thinking about just killing you."

"We don't even want you to know what your name is, Tannie."

"Amazon, if someone was telling me to close down my business, I'd be gone already."

"I want you to be a whore so bad."

"I want you standing on the street corner, whoring and calling me God."

"I want your God to worship me."

"I want you layin' up f------ your God."

"Furhman ain't nothin' compared to what we've got goin' on. We've been killin' those niggers one by one."

"In this country, I am God."

"You're gonna die."

"I don't care what I do to you. You're just a nigger anyway."

"We're out here to ruin your life."

"I've made so much money of your vagina -- your hole."

"We want this nigger to do as she's told."

"A dog like you is nothin' but entertainment to us."

"We don't want a dog like you to ever benefit from that brain of yours."

"I killed your mother to drive you crazy."

"To me, colored people aren't human."

"A lot of cattlemen own a piece of you."

"White people own you."

"I've turned you into a whore."

"We don't want a nigger like you even eating."

"The police don't want you there."

"That position you're in is reserved for white people."

"Your rights have been taken away from you."

"I am the damn Lord."

"We're using you as an example."

"White people don't want your business to continue."

"I like to look up women's asses, and I want to keep doin' it."

"Women like you have been eliminated so many times."

"Why don't you become a cop and get set up to be murdered by cops themselves?"

"I've made so much money off your naked body."

"Ain't no black woman at the forefront of nothin'."

"You deserve it."

"What does your body mean?"

"I want you to think that what we're doin' is legal."

WHEN I VISIT BALLY'S HOLIDAY HEALTH SPA:

"You're not wanted here!"

"Get out of here!"

"We don't want you bathing. We want you to wake up tomorrow in the same condition you're in now."

"I have a right to look in on these women."

"Dogs like these deserve to be looked in on."

"These kind of women deserve to be spied on."

"These fat whores --."

When I visit a restroom, these men bounce their voices off the private parts of my body -- and off the tissue paper while I'm using it between my legs.

When I shower, these men scream at me through the flowing water, and bounce their voices off my body as I wipe it with a towel.

When a situation arises in which I'm looking for a lost item, or for directions to a location, or reading, or in any other inherently stressful situation, these men scream repetitively, "I AM GOD!" or "GET OUT OF HERE!" or they make lewd statements about me or my daughter, or my deceased mother; or they make any other statement which they apparently believe will debilitate my concentration -- or state of mind -- so that I will be able to hear only them, and think of only them.

These men ring tones in my ears, and flash small red and white lights around me while demanding that I act or not act in various situations, such as my purchases at a store, my meals, my baths, my work, and my telephone calls.

5093. Icom R-7000 With Extra's For Sale

Newsgroup: rec.radio.scanner
Date: 1999-06-18 00:00:00 UTC
From: Fred Allen <FAllen-IDC@worldnet.att.net>
Message-ID: <01beb9b5$8bb274a0$d1804b0c@default>
Source record: 115092

I have a Icom R7000 VHF/UHF Receiver plus Extra's for sale. The Icom R-7000 covers 25-1999.999MHz, in all modes. It comes with the box, manual, and service manual, and is in excellent condition. It also includes the TV-R7000 ATV Unit, AH7000 Omni Antenna, with 50 feet of coax with "N" connectors, the Novex 7100 VLF/HF converter which extends the range of the 7000 down to 20 KHz, the Novex R-7000 Rack Mount unit with the external speaker, and the ICOM SP-3 External Speaker. Price is $950.00 shipped via Fedex 3 day Economy. Please e-mail for a picture. Thanks Fred.

5094. CONDITIONED RESPONSES VS "NEW" BRAIN TECHNOLOGY

Newsgroup: rec.radio.scanner
Date: 1999-06-18 00:00:00 UTC
From: capaliwoda@netzero.net
Message-ID: <199906181817.UAA04308@mail.replay.com>

CONDITIONED RESPONSES VS "NEW" BRAIN TECHNOLOGY

With a behind the scenes view, it is obvious that the public is literally "conditioned" with an automatic response with what has probably been a continuous process of reverse media and other types of propaganda to automatically reject any complaint in which a victim claims to be "hearing voices". They are conditioned to perceive this as a "classic" pathological symptom (with a "classic" description--which has made its way into "classic" textbooks) which could not possibly have any foundation in fact. This is your "textbook" symptom, in other words. The technology has been around so long now (albeit in the wrong hands--probably since the 1960's) that there has actually been time to rewrite the textbooks and reform medical curricula to adapt to the power plan. It has become a closed system, with goon squads eliminating witnesses. From behind the scenes, from the vantage point of knowing about the capability to produce microwave hearing effects which has been in existence for almost, if not in excess of, thirty years (carefully concealed from public knowledge except for one or two books and press releases), the whole thing savors of a carefully orchestrated public relations conspiracy. How common were those cases of victims reporting "hearing voices" attributable to this source? What percentage were results of genuine aberration or perhaps drug usage, and what percentage reflects this now sinister appearing scheme to influence the minds of members of the populace from behind the scenes? What is the extent of collaboration on the part of segments of the psychiatric profession? How many of them were witting? I have personally documented to my own satisfaction the existence of brain control technology for 26 solid years, along with the conspiracy to hide it. I have kept journals on this phenomenon for that length of time--saved newsclippings and books hoping to find vindication for what I now know to be fact. The public is conditioned like Pavlov's dog to automatically reject the possibility of such a thing actually existing, and this poses a maximal danger to society as it falls prey to a very sinister scheme to control it from behind the scenes.

The reasons government and the media would engage in the scheme of concealment is partly the use of force which is

intrinsic in the brain control itself--the ability to neutralize thought, literally, with electronic disruption. Also, the powers that be are aware of the dangers of said technology, should it fall into the wrong hands. However, the abuse I have experienced at the mercy of some of these operators indicate that the technology is already in some very wrong hands--the worst conceivable, in fact.

The closest I have ever seen to a public revelation of what this technology can do was a 1976 Associated Press newspaper release (printed in the Cleveland Plain Dealer November 22, 1976, p. 9-A) entitled "Mind-bending Soviet radio waves reported". Now that was over two decades ago, and the stuff is still secret, which frightens me (with regard to possible inroads against privacy which may have been achieved since then). Part of the text of that release follows:

"A newly declassified U.S. Defense Intelligence Agency report says extensive Soviet research into microwaves might lead to methods of causing disoriented human behavior, nerve disorders or even heart attacks. 'Soviet scientists are fully aware of the biological effects of low-level microwave radiation which might have offensive weapons application', says the report....
The Pentagon agency's report, distributed within the governmentlast March, said one biological effect that could offer antipersonnel uses is the phenomenon known as 'microwave hearing'. 'Sounds and possibly even words which appear to be originating (within the head) can be induced by signal modulation at very low average power densities', the study said....
The report was compiled by Ronald L. Adams of the Army surgeon general's office and Dr. R.A. Williams of Batelle Laboratories, Columbus [Ohio]."

Although microwaves could be utilized, the penetrability of the signal (capable of being received in subterranean places like the transit entranceway beneath Cleveland's Terminal Tower complex and certainly not blockable by anything so flimsy as a few sheets of tinfoil) leads me personally to suspect the use of high-energy (thus ionizing) radiation--something more like an X-ray. I am, however, no expert on these things.

See also at the end of this report a copy of a 1962 paper by Allan Frey, made available by Alex Constantine on Usenet recently (alt.mindcontrol, 4-15-99, under heading "1962 Monograph/RF Brain Transmissions"). This is reposted to counter accusations by certain people that the technology for brain control could not possibly exist at the time I

claimed it did. It describes a parallel exploration of the effects of electromagnetic radiation, particularly for sound simulation, in the United States.

Also of interest:
http://www.totse.com/files/FA014/ibmmndcn.htm
The above is a web page with what purports to be an IBM Corp. internal memo about a neural implant chip tested by IBM. I cannot personally ascertain its legitimacy.

One of the very earliest publications dealing with the Soviet interest in the phenomenon was PSYCHIC DISCOVERIES BEHIND THE IRON CURTAIN by Sheila Ostrander and Lynn Schroeder, which first came out May, 1970 (Prentice-Hall). Since then, the technology has found its way to other countries--most notably our own. It is difficult to believe that we do not have a mirror program which duplicates anything the other side has. The main reason to be given for not developing technology in this direction overtly is that the medium used is a health hazard sure to be condemned by health authorities like the FDA, and hence would be blackballed as illegal. It has clearly made its way into so-called black projects, however.

Even earlier than this (written up in LIFE magazine in September, 1962) there were rumors that the neurophone invented by G. Patrick Flanagan in the United States (author of the book PYRAMID POWER, 1973, De Vorss & Co.) could effect a telepathic transfer (but this machine was not wireless).

There is regular censorship and denial by government and mainstream news-media. Fear of proliferation and subsequent increases in abuse are probable rationales, as well as the fact that there is no public admission that hazardous radiation would be used as a communications medium, this being inherently illegal. At very low levels of intensity, the perils might not be that great. I seem to have survived heavy bombardment nowhere near any safe range (on purpose) nearly intact. I wish that socially acceptable restriction of this technology would make disclosure unnecessary. If complaint to authorities brought a reasonable resolution of the problem, instead of what looks from here like either gross indefinite neglect or unforgivable collusion, it would not be necessary. However, as things stand, the price of silence is incredible extremes of abuse, against which no steps are ever taken. It is galling that someone could undergo 26 years of torture and human rights abuses in the United States of America, which touts itself all the time as the freest country in the world, yet there is barely a whisper of the situation

anywhere, despite perpetual complaining by the victim. Why should any underclass of people be living lives of the damned in modern America? It certainly goes against the much repeated clause that all men are created equal and are endowed with certain unalienable rights, to have a thriving slave traffic in the United States whose perpetrators never face any indictment. In likelihood, the crime would have been solved long ago had there been any degree of publicity. In their behalf, it might be stated that criminal elements could be overwhelming police. In this case, shouldn't the public be informed so that all concerned can reinforce the fight against crime? Why should the country be overwhelmed by an internal enemy and no defenses be brought against it, due to secrecy? It could continue to grow in potency and to overcome internal opposition, with dire consequences.

An eavesdropping capability is essential to intercepting misuse. One note of hope is that the weapon can to some extent serve as its own means of detection--that is, it can be used to detect illegal operators by being able to see through walls.

While surfing the net looking for signs other persons have experienced the same type of problem I have as a victim, I have come across the following interesting web sites, which you could also look into:

1962 ALLAN FREY PAPER FOLLOWS:

1962 Journal of Applied Physiology 17(4) pages 689-692.

ALLAN H. FREY

General Electric Advanced Electronics Center
Cornell University
Ithaca, New York

Frey, Allan H., Human Auditory system response to modulated electromag-
netic energy. J. Appl. Physiol. 17(4): 689-692. 1962.

Note: The intent of this paper is to bring a new phenomena to the attention of physiologists. Using extremely low average power densities of electromagnetic energy, the perception of sounds was induced in normal and deaf humans. The effect was induced several hundred feet from the antenna the instant the transmitter was turned on, and is a function of carrier frequency and modula- tion. Attempts were made to match the sounds induced by electromagnetic energy and acoustic energy. The closest match occurred when the acoustic amplifier was driven by the rf transmitter's modulator. Peak power density is a critical factor and, with acoustic noise of approximately 80 db, a peak power density of approximately 275 mw / rf is needed to induce the perception at carrier freq- uencies 125 mc and 1,310 mc. The average power density can be at rf as low as 400 _u_w/cm2. The evidence for the various positive sites of the electromagnetic energy sensor are discussed and locations peripheral to the cochlea are ruled out.

Received for publication 29 September 1961.

A significant amount of research has been conducted with the effects of radio-frequency (rf) energy on organisms (electro- magnetic energy between 1 kc and ** Gc). Typically, this work has been concerned with determining damage resulting from body temperature increase. The average power densities used have been on the order of 0.1-t w/cm2 used over many minutes to several hours.

In contrast, using average power densities measured in microwatts per square centimeter, we have found that ****r effects which are transient, can be induced with rf energy. Further, these effects occur the instant the transmit- ter is turned on. With appropriate modulation, the perception of different sounds can be induced in physically deaf, as well as normal, in human subjects at a distance of inches up to thousands of feet from the transmitter. With somewhat different transmission parameters, you can induce the perception of severe buffeting of the head, without such apparent vestibular symptoms as dizziness or nausea. Changing transmitter parameters down, one can induce a "pins-and-needles" sensation.

Experimental work with these phenomena may yield information on auditory system functioning and, more generally, in the nervous system function. For example, this energy could possibly be used as a tool to explore nervous system coding, possibly using Neider and Neff's procedures (1), and for stimulating the nervous system without the damage caused by electrodes.

Since most of our data have been obtained of the "rf sound" and only the visual system has previously been shown to respond to electromagnetic energy, this paper will be concerned only with the auditory effects data. As a further restriction, only data from human subjects will be reported, since only this data can be discussed meaningfully at the present time. The long series of studies we performed to ascertain that we were dealing with a biological significant phenomena (rather than broadcasts from sources such as loose fillings in the teeth) are summarized in another paper (2), which also reports on the measuring instruments used in this work.

The intent of this paper is to bring this new phenomenon to the attention of physiologists. The data reported are intended to suggest numerous lines of experimentation and indicate necessary experimental controls. Since we are dealing with a significant phenomenon, we decided to explore the effects of a wide range of transmitter parameters to build up the body of knowledge which would allow us to generate hypotheses and determine what experimental controls would be necessary. Thus, the numbers given are conservative; they should not be considered precise, since the transmitters were never located in ideal laboratory environments. Within the limits of our measurements, the orientation of the subject in the rf field was of little consequence.

Most of the transmitters used to date in the experimentation have been pulse modulated with no information placed on the signal. The rf sound has been described as being a buzz, clicking, hiss, or knocking, depending on several transmitter parameters, i.e., pulse width and pulse-repetition rate (PRF). The apparent source of these sounds is localized by the subjects as being within, or immediately behind the head. The sound always seems to come from within or immediately behind the head no matter how the subjects twists or rotates in the rf field.
Our early experimentation, preformed using transmitters with very short square pulses and high pulse-repetition rates, seemed to indicate that we were dealing with harmonics of the PRF. However, our later work has indicated that this is not the case; rather, the rf sound appears to be incidental modulation envelope on each pulse, as shown in Fig 1. Some difficulty was experienced when the subjects tried to match the rf sound to ordinary audio. They reported that it was not possible to satisfactorily match the rf sound to a sine wave or to white noise. An audio amplifier was connected to a variable bypass filter and pulsed by the transmitter pulsing mechanism. The subjects, when allowed to control the filter, reported a fairly satisfactory match. The subjects were fairly well satisfied with all frequencies below 5-kc audio were eliminated and the high- frequency audio was extended as much as possible. There was, however, always a demand for more high-frequency components. Since our

tweeter has a rather good high-frequency response, it is possible that we have shown an analogue of visual phenomenon in which people see farther into the ultraviolet range when the lenses is eliminated from the eye. In other words, this may be a demons- tration that the mechanical transmission system of the ossicles cannot respond to as high a frequency as the rest of the auditory system. Since the rf bypasses the ossicle (a bone in the inner ear ed.) system and the audio given the subject for matching does not, this may explain the dissatisfaction of our subjects in the matching.

FIG. 1. Oscilloscope representation of transmitter output over time (pulse-modulated).

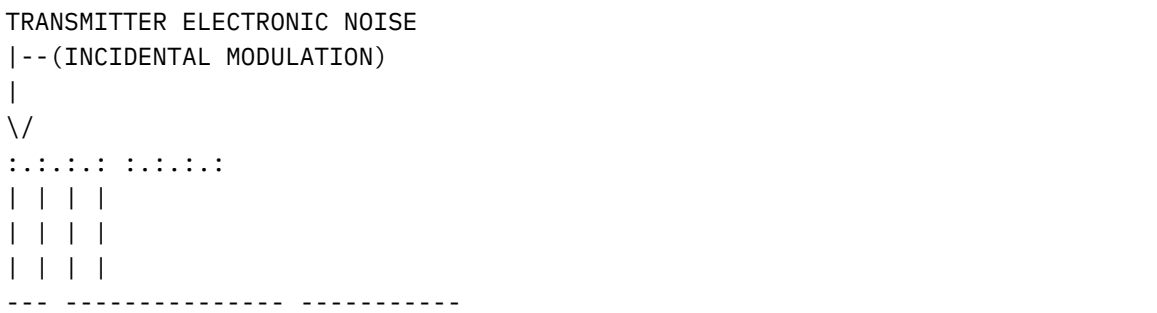

FIG. 2. Audiogram of deaf subject (otosclerosis) who had a "normal" rf sound threshold.

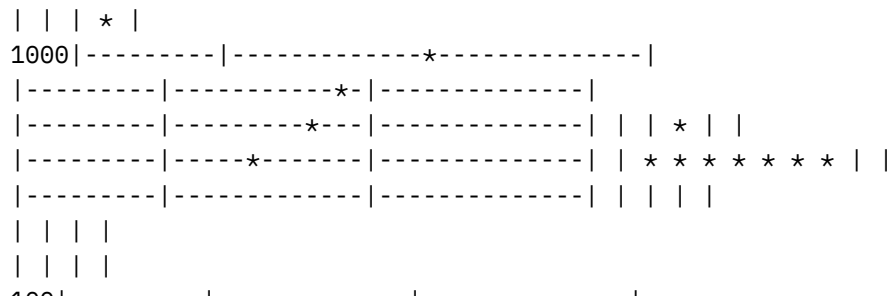

FIG. 5. Microwave power distribution in a forehead model neglecting resonance effects and considering only first reflections (from Nieset et al. (5), modified).

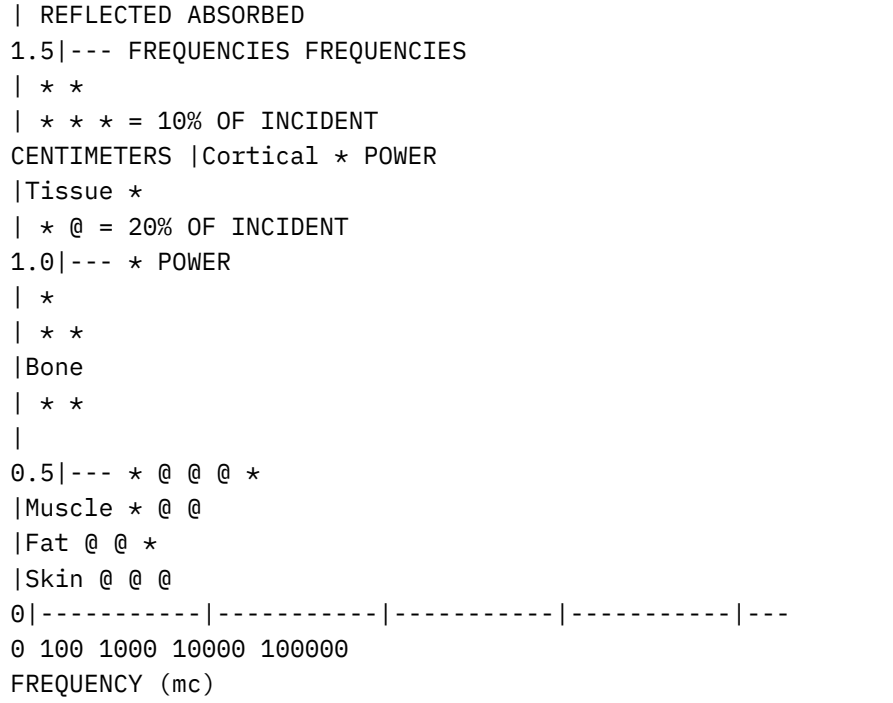

FIG. 6. Area most sensitive to electromagnetic energy (shaded portion).

* * * * * * * * *

At one time in our experimentation with deaf subjects there seemed to be a clear relationship between the ability to hear audio above 5 kc and the ability to hear rf sounds. If a subject could hear above 5 kc, either by bone or air conduction, then he could hear the rf sounds. For example, the threshold of the subject whose audio gram appears in Fig. 2 was the same average power density as our normal subjects. Recently, however, we have found people with a notch around 5 kc who do not perceive the rf sounds generated by at least one of our transmitters.

THRESHOLDS

As shown in Table 1, we have used a fairly wide range of transmitter parameters. We are currently experimenting with transmitters that radiate energy at frequencies below 425 mc, and are using different types of modulation, e.g., pulse-repetition rates as low as 3 and 4/sec. In the experimentation reported in this section, the ordinary noise level was 70-90 db (measured with a General Radio Co. model 1551-B sound level meter.) In order to minimize the rf energy used in the experimentation, subjects wore Flent antinoise ear stoppers whenever measurements were made. The ordinary noise attenuation of the Flents is indicated in Fig. 3. Although the rf sounds can be heard without the use of Flents, eventhough they have an ambient noise evel of 90 db, it appears that the ambient noise to some extent "masked" the rf sound.

Table 2 gives the thresholds for the perception of the sounds. It shows fairly clearly that the critical factor in the perception of the rf sound is the peak power density, rather than the average power density. The relatively high value for transmitter B was expected and will be discussed below. Transmitter G has been omitted from the table since the 20-mw/cm2 reading for it can be considered only approximate. The field-strength-measuring instruments used in that experiment did not read high enough to give an accurate reading. The energy from transmitter H was not perceived, even when the peak power density was as high as 25 w/cm2.

When the threshold energy is plotted as a function of the rf energy (Fig. 4), a curve is obtained which is suggestive of the curve of penetration of rf energy into the head. Figure 5 shows the calculated penetration, by frequency of rf energy, into the head. Our data indicate that the calculated penetration curve may well be accurate at the higher frequencies but the penetration at the lower frequencies may be greater than that calculated on this model.

As previously noted, the thresholds were obtained in a high ambient noise environment. This is an unusual situation as compared to obtaining thresholds of regular audio sound. One recent experimentation leads us to believe that, if the ambient noise level were not so high, these threshold fields strengths would be much lower. Since one purpose of this paper is to suggest experiments, it might be appropriate to theories as to what the rf sound threshold might be if we assumed that the subject is in an anechoic chamber. It is also assumed that there is no transducer noise. Given: As a threshold for the rf sound, a peak power density of 275 mw/cm2

determined in an ambient noise environment of 80 db. Earplugs attenuate the ambient noise 30 db.
If: 1 mw/cm2 is set equal to o db, then 275 mw/cm2 is equal to 24 db.
Then: We can reduce the rf energy 50 db to -26 db as we reduce the noise level energy from 50 db to o db. We found that -26 db rf energy is approximately 3 _u_w/cm2.
Thus: If an anechoic room, rf sound could theoretically be induced by a peak power density of 3 _u_w/cm2 measured in free space. Since only 10% of this energy is likely to penetrate the skull, the human auditory system and a table radio may be one order of magnitude apart in sensitivity to rf energy.

RF DETECTOR IN AUDITORY SYSTEM

One possibility that seems to have been ruled out in our experimentation is that of a capacitor-type effect with the tympanic membrane and oval window acting as plates of a capacitor. It would seem possible that these membranes, acting as plates of a capacitor, could be set in motion by rf energy. There are, however, three points of evidence against this possibility. First, when one rotates a capacitor in an rf field, a rather marked change occurs in the capacitor as a function of its orientation in the field. When our subjects rotate or change the positions of their heads in the field, the loudness of the rf sound does not change appreciably. Second, the distance between these membranes is rather small, compared with the wavelengths used. As a third point, we found that one of our subjects who has otosclerosis xheard the rf sound.

Another possible location for the detecting mechanism is in the cochlea. We have explored this possibility with nerve-deaf people, but the results are inconclusive due to factors such as tinnitus. We are currently exploring this possibility with animal preparations.

The third likely place for the detection mechanism is the brain. Burr and Mauro (6) presented evidence that indicates that there is an electrostatic field about neurons. Morrow and Sepiel (7) presented evidence that indicates the existence of a magnetic field about neurons. Becker (personal communication) has done some work indicating that there is longitudinal flow of charged carriers in neurons. Thus, it is reasonable to suspect that possibly the electromagnetic field could interact with neuron fields. As yet, evidence of this possibility is inconclusive. The strongest point against it is that we have not found visual effects although we have searched for them. On the other hand, we have obtained other nonauditory effects and have found that the sensitive area for detecting rf sounds is a region over the temporal lobe of the brain. One can shield, with a 2-in.2 piece of fly screen, a portion of the stippled area shown in Fig. 6 and completely cut off the rf sound.
Another possibility should also be considered. There is no good reason to assume that there is only one detector site. On the contrary, the work of Jones et al. (8), in which they placed electrodes in the ear and electrically stimulated the subject, is sufficiently relevant to suggest the possibility of more than one detector site. Also, several sensations

have been elicited with properly modulated electromagnetic energy. It is doubtful that all of these can be attributed to one detector.

As mentioned earlier, the purpose of this paper is to focus the attention of physiologists on an unusual area and stimulate additional work on which interpretations can be based. Interpretations have been deliberately omitted from this paper since additional data are needed before a clear picture can emerge. It is hoped that the additional exploration will also result in an increase in our knowledge of nervous system functions.

The frequency range for channel 68 (EIA) is 486-492 MHz. The
interference you see on channel 68 is, most likely, caused by a UHF TV
station broadcasting on channel 16 or 17. UHF off-air frequencies are
2 MHz off of the cable designated (EIA) frequencies. This means that
one UHF station can interfere with two cable channels.

Hope this helps.

The tower will be on the same freq as the aircraft. How far from the transmitter are you? Tower frequency transmitters are very low powered (sometimes as little as 5 watts) because they are line of sight and do not need to transmit very far. Try using an external antenna made specifically for the VHF aircraft band. Let me know if you have any questions about what you hear!

From: Paul <merlet@eudoramail.com>
Message-ID: <7kek81$4s3$1@santaclara.santafe.edu>
Source record: 115108

I'm convinced I need a freq. counter but know nothing to little about them. I'd like a protable one. I'm trying to catch some frequencies that I can't find in books. Most are police, security guards at casinos, stuff like that. I saw some at ebay.com but don't know enough to plunk my money down. What should I look for and what kind of prices should I expect? A used one would be ok/nice.

Thanks for the advice.
Paul

I agree. But, if I want to listen to Click & Clack from PRS while I am walking, I need a long cord for my VCR. Besides, its heavy! :>)

Thanks for the response.

The new BC245 coming out in July will trunk track both systems. Found it
for a good price at National Electronics on the web.Also, be SURE to get
the S. Fl trunking guide by Brian Cathcart, scannerdude@juno.com It is
absolutely a great/accurate guide to scanning trunked systems here.

That wasn't specified in the question. You asked if there was a recorder
that will turn itself on and off based on a pre-set clock. Next time be
more accurate and precise with your question..

The FRS frequencies are allocated as follows:

1. 462.5625
2. 462.5875
3. 462.6125
4. 462.6375
5. 462.6625
6. 462.6875
7. 462.7125
8. 467.5625
9. 467.5875
10. 467.6125
11. 467.6375
12. 467.6625
13. 467.6875
14. 467.7125

When somebody posts a question and Bill answers with the correct answer, why would the guy ask anyone else. Cheek responded to 95% of radio shack scanner questions which is about 100 a month, and many other scanner related questions. In comparison and giving you more credit due you may have posted something related to scanners 6 times in the last 3 years but hold the record for 350 off topic posts in a month. The post below is just another fine example or some of your best..

AS hard as it is to believe, I have tried all of the Comet, Diamond and Premier antennas only to find that the Watson 881 "SuperGainer" is the best from 100-1000mhz. Most of all I was surprised at it's superior performance in the 800mhz range considering that it is overall 16" length but is loaded to accommodate all band centers across.

5126. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.scanner
Date: 1999-06-18 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7kcbr7$2et@news.Hawaii.Edu>
Source record: 115172
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's

headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Greetings Fellow ScannerHeads,

I am travelling to the San Fransisco Bay area in July (staying in Oakland) and am having little or No Joy finding frequencies. I know so far that both San Fransisco and Oakland are G.E. /Ericsson trunked systems (except for BART and CALTRANS). I was unable to gain access to the Bay Area Scanner Enthusiasts web site : http://www.baseclub.org/ for some reason. Can someone supply me with frequencies (both Motorola analog trunked and conventional vhf/uhf) for the area? Or at least point me in the direction of some web sites or other places to get these freq's? Thanks in advance.

Happy Scanning,

Jim

Agreed, but asking Lloyd to stay either on-topic or even mildly up to date is like asking Charles Manson to head the Department of Mental Health... just doesn't work! :-)

The tower transmits on the same frequency but there are apparently
too many obstacles (buildings, hills, etc) in the way. You can
hear the planes because their signals are making near-line-of-site
contact with your scanner. I live around 15 miles from a major
airport. Tower reception varies from zero to very strong, depending
on my location. From a hilltop on the edge of town (20 miles from the
airport) I can even hear planes at the gate going through preflight
checks with apron and ground control. Planes in the air come in loud
and clear from as far away as 100 miles or more (my estimate).

Source record: 115183

JasonK <JasonK@verio.net> asked:
> What are the frequencies for cable channel 68?
> Are there any pager frequencies near Ch. 68?

Cable channel 68 runs from 484 to 490 MHz, with the video carrier at
485.250. This overlaps the broadcast TV channel 16 at 482-488 MHz. If an
external signal is leaking into the cable system it may be a broadcaster
or a mobile radio service. 482-488 MHz is allocated for Land Mobile use
in the Boston, Dallas/Ft. Worth, Detroit, and San Franciso/Oakland areas.

From: kb5fas@postoffice.swbell.net
Message-ID: <376BA006.5CF9B0E5@postoffice.swbell.net>
Source record: 115044

A couple of questions regarding the FLTSATCOM & other similar military satellites:

(1) Is there a carrier frequency for each one? If not - how do ground troops/stations locate the satellite they wish to use?

(2) What is the output power of most of these satellites?

(3) I am assuming the mode is AM - is this correct?

(4) Finally.....I'm using an Alinco DJ-X10 and 220 mhz boomer beam (10 db gain). Any chance of hearing them with this beam or is a pre-amp also something I'll have to have as well.

All help is appreciated.

If you're interested in military monitoring then you should join join MilCom, the e-mail listserver
dedicated to military monitoring.

To join:

Send an e-mail message to: majordomo@qth.net
In the subject put: milcom
In the text area put: subscribe milcom

That's all there is to it. You should start receiving messages within a few hours.
To post a message to the list members address it to milcom@qth.net
We have members all over the country, in Europe and Japan.
For help finding frequencies in your area, or other information on military monitoring, just post a message stating your location
and requesting frequency help and you should get some answers.

Sure, if you want to spend $40+ dollars on a wire dipole antenna that you can get the plans for off the internet for free and spend $5 or less to make go ahead! I've got some ocean front property here in Indiana I'd like to sell you!

5157. Need access to police databases

Newsgroup: rec.radio.scanner
Date: 1999-06-19 00:00:00 UTC
From: David Pinero <openbroadcast@yahoo.com>
Message-ID: <7kgmtm$vj8$1@nnrp1.deja.com>
Source record: 115053

Hi! I am developing a site that showcases "live incident" pages in the framework of the Open Broadcasting campaign (see URL in sig). These are pages which update the community on live incidents ranging from traffic conditions to full-blown chit-chat between police MDTs (which California posts on the web). I believe these sites are excellent examples of compensantory solutions for public safety agencies that close their usual police communications off from the public by switching to digital radio systems. I want to spotlight such sites to model them, and hopefully spur the imaginations of tech-whizzes at other police departments who stumble on it.

Please respond via e-mail.

To get an idea of the site URLs I'm looking for, visit the initial entries at:

http://home.tampabay.rr.com/mercury/teletype/

Thanks everyone!

Dave

Julian
In the USA there are 3 national medical frequencies for interagency use.
They are 155.260, .340, .400 MHz you might want to try those first.
The local LifeLine for Louisville uses the 155.400MHz frequency. Or you
might want to check out the FCC Wireless Communications Bureau search
engine for their frequency. You can search by state and/or frequency at
http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/index.hts

I have taken mine apart and I notice a half-dollar size glob of black epoxy on the back of the circuit board. Let's say that if I could find a way to remove this epoxy, would anything under it be able to be changed to allow a wider span of freqs? They are obviously coveing SOMETHING or it wouldn't be there!

> troops/stations locate the satellite they wish to use?

Some have beacons, but users know where on the horizon the satellite
should be.

> (2) What is the output power of most of these satellites?

It's related to the uplink power/dBs of signal received by the
transponder.

> (3) I am assuming the mode is AM - is this correct?

No.

> (4) Finally.....I'm using an Alinco DJ-X10 and 220 mhz boomer beam (10
> db gain). Any chance of hearing them with this beam

Yes. But more & more traffic is digital DAMA mode, which tends to blend
in with the noise floor unless you've got a pretty good signal on the
transponder. A good portion of the non-secure, analog voice traffic (such
as the Joint Task Force - Full Accounting) is that way because it was
mandated so for political considerations.

Mental Ward spammed ya with his MILCOM advertisement. MILCOM is OK if
you've got a lot of free time & a broad interest in military comms, but it
often has a very high signal to noise ratio due to an inept or non-existent
list administrator to issue & enforce net discipline.

Do you remember how much it cost new then? One of
its biggest benefits is it is easy to modify. Under the new
FCC regulations, they can't make one like that again.
Besides, if it can't trunktrack these days and can't be modified,
I don't want it. The '57 Chevy was good too, not permitted
to make them like that again either. :-(

Bruce, what do you consider a "reasonable price?" You're after some of the most popular used scanners on the market, with even the Pro-2004 often bringing $250.00 and up.

I have a complete owners service manual, and also a complete service manual. There are many mods that can be done to enhance the Regency Turbo Scan (TS/2).

Nice radio if you live in the deep suburbs or don't plan to use an outdoor antenna. The radio has almost NO Front End. But, the scan rate of 50-75 channels per second is a nice feature.

Nice idea, but I know of no department that is going to someone access
to their database that does not work for them. You could really reek
havoc on a department with that kind of access.

If the different departments don't want it, it ain't gonna happen ...

Just my 2cents ...

Greetings:
I am in the market for a top of the line scanner. I don't want to miss anything :))

I was hoping to get some feedback as to what to look for in a scanner and any model that you could recommend.

Thanks,

Ray

For Sale: Pro 51, 200 channel hand held scanner, $100. Or will trade for portable, digital SW radio.

The Pro 51 has a date code of 10A5. It comes with antenna, belt clip and box.

No manual. Scanner is in excellent shape. It uses 4 x AA batteries.
The Pro 51 also has fire, weather, and marine band search.

The Pro 51 covers:
29to 29.7 MHz (10 meter amateur band)
29.7 to 50 MHz (VHF low band)
50 to 54 MHz (6 meter amateur band)
108 to 136.975 MHz (Aircraft band)
137 to 144 MHz (Military land mobile)
144 to 148 MHz (2 meter amateur band)
148 to 174 MHz (VHF high band)
406 to 420 MHz (Federal government land mobile)
420 to 450 MHz (70-cm amateur band)
450 to 470 MHz (UHF standard band)
470 to 512 MHz (UHF "T" band)
806 to 956 MHz (Public service except cellular band)
Weather service channels.....
162.400 MHz 162.500 MHz
162.425 MHz 162.525 MHz
162.450 MHz 162.550 MHz
162.475 MHz

Thanks,

D. Schopp

This is the same battery that the ICOM model IC-2SAT uses.
E.H.Yost/Batteries America lists them for $22.50 + 5.50 shipping.

http://www.mrnicd-ehyostco.com/newpage2.htm

ELKEL, in Quebec lists them for $99 Canadian.

You know, Bill Cheek quit posting regularly quite a while ago. I believe it was last year. Wasn't it loony boy?

(insert inane macro SQUAWK from loony boy here)

Yeah.....but it was *last* year.

And here ya are bad mouthing him continually on this NG. A damn near daily event from what I gather.

Oh....and don't give me any of that "I onlyspeaktruth soproduce PROOF orbeshown a LIAR" crap. You and I both know that you'll post anything in the worst possible light to generate animosity and hostile responses. That's what you're here for. Not radio, or scanning, or anything like that; it's your mission to annoy the world and you think you've found some sort of anti-christ in Bill Cheek to justify your obsessive rantings. That's your friggin' mission.

OK...great. Go for it.

However, I only wish to point out that it's going to get harder and harder to maintain your delusion of some sort of righteous battle being played out here.

You see.....the guy you *think* you're arguing with quit posting to this NG regularly last year. Get it? Last *year*.

You gotta figure out something else to rant about now;

...because you're starting to look *really* weird.

You friggin' loon.

And if he had specified the state, I would not have responded. We have a Town of Brighton (Monroe County, which borders Livingston), a Town of Hamburg (Erie County), and a Pinckney Township, I think, but I don't recall offhand where it is.

By the way, there are no for-pay information or services at the NF2G Scannist Pages (except my wife's crafting business, which is not at all reasonably connected to the main topic of NF2G.COM).

>Ma.
>area.

I often see the blimps in the Baltimore area. If you see them try the local ATC frequencies. If you can find out where they are moored and can stop by they are usually pretty willing to talk to you. I have talked to the crews of MetLife, Goodyear, and Fuji. Also if you can get the tail numbers you might try a site at www.airnav.com for further info on the airship. There is also a site dedicated to airships but I dont remember the URL.

I hope this has been a help to you.

The Pacific satellite retransmits SUN-FM from the Philipines.

>(2) What is the output power of most of these satellites?

Dunno

>(3) I am assuming the mode is AM - is this correct?

FM for the Pacific bird.

>(4) Finally.....I'm using an Alinco DJ-X10 and 220 mhz boomer beam (10
>db gain). Any chance of hearing them with this beam or is a pre-amp also
>something I'll have to have as well.

I can hear them hear in Sydney, 33° south, using a whip antenna on an Icom
R10 and an old AOR 2000, but they are noisy. More gain would help me a lot.
Signal are much stronger as one heads north from here.

>Back then, tube
>technology (which was pretty much 'voltage' amps and high
>impedance) wasn't as protected as a lot of todays technology.

As I understand it modern electronics are thousands of time more vulnerable to EMP than olde rtube type technologies.

> was told a ground busrt doesn't yield near the EMP of an air burst.
>But that's not to say it still won't knock out tons of equipment.

High altitude can cover more area with EMP as i understand it. Several large high altitude bursts could probably wipe out most of the non protected electronics in the US.
>Today the power grid is
>probably
>LESS sensitive to a massive overload.

Probaly more vulnerable do to computer control and a more "interdependent" grid system.
I am not an expert but I have read a little on the subject. quite interesting

5215. Looking for good mobile scanner antenna

Newsgroup: rec.radio.scanner
Date: 1999-06-20 00:00:00 UTC
From: joerg@access1.net
Message-ID: <376CADAE.2FDA@access1.net>
Source record: 114903
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I am looking for a good magnet foot car antenna for my 25-1300MHz hand held scanner. Use it mostly in 30-500MHz range, in remote locations with weak signals.
I have tried the Radio Shack 25-1300 magnet base Antenna for $29.95, but was not satisfied. Any recommendations ? Any opinions on radio antenna splitters ?

Thanks a lot in advance! Happy Fathers Day...

Joerg

5216. Icom IC-R 8500 Discrim Output.

Hi People,
Being of limited Techno skills I would appreciate any advise regarding the discriminator for the Icom IC-R8500.
In the manual there is reference to Data communications. It says to get output for high speed data (9600 bps) an internal jumper plug has to be adjusted converting the AGC output into the AF direct detector output, 200 mVrms/4.7k ohms.
Is this just a clever way of saying "Get your discrim output here". Or am I totally on the wrong track and about to blow myself up?!!
I need the output for trunked radio .
Will this be sufficient?
T.I.A Tom.

Hi to all scanner enthusiasts! I 'm a newbie into scanning and I would greatly appreciate if anyone could
help me with the following three questions:

1. What is the best URL for a newbie to start looking into scanning info?
2. I got an ICOM PCR1000. Is the antenna with it any good or I have to buy a new antenna? I am able to pick up
some radio-taxi calls but I haven't managed yet to pick up the local airport conversations.
3. Does anybody out there know any frequencies list in Greece ?

Thank you very much in advance!

Top of the line would run you about $6000 for an Icom IC-R9000.
Next step down would be the ARO AR-5000+3 or Icom IC-R8500 for
around $2000.

Still interested in "top of the line"?

You should probably do more research and decide which scanner
is best for all of YOUR needs. Stop by my Picking A Scanner/
Reciever page for help in doing just that:

The 2006 can trunk track if equipped with a CE-232 or OS456. Uniden trunk trackers certainly are not easily modified. What scanner fits your criteria?

Hi

Does anyone have National or Local (for Northwest Columbus, Ohio)
frequencies for the Target Store chain?

Thanks!

JC

Well what kind of frequencies will you be monitoring? If there are any 800 MHz Trunked systems in your area that you would want to listen to, it would be wise to purchase a trunk tracker scanner. If not than a basic scanner would probably do fine. How many channels do you want, what features are you looking for? Might want to take a look at Unidens website, might give you a few ideas. http://www.uniden.com

From: Dan Rollman <danr@azstarnet.com>
Message-ID: <376D2817.7042D5E3@azstarnet.com>
Source record: 114932

Can someone describe to me what the differences between the Realistic Pro-2006 and 2005 are? They appear VERY similar. Why did the 2006 replace the 2005, given how close they are in appearence and specs? And what are the main differences?

Is the 2005 just as good a radio as the 2006 is?

Please reply by email, or in the newsgroup AND by email.

Thanks in advance for your help!
Dan

From: David Pinero <openbroadcast@yahoo.com>
Message-ID: <7kjev3$n6f$1@nnrp1.deja.com>
Source record: 114934

Hi! I am developing a site that showcases "live incident" pages in the framework of the Open Broadcasting campaign (see URL in sig). These are pages which update the community on live incidents ranging from traffic conditions to full-blown chit-chat between police MDTs (which California posts on the web). I believe these sites are excellent examples of compensantory solutions for public safety agencies that close their usual police communications off from the public by switching to digital radio systems. I want to spotlight such sites to model them, and hopefully spur the imaginations of tech-whizzes at other police departments who stumble on it.

Please respond via e-mail.

To get an idea of the site URLs I'm looking for, visit the initial entries at:

http://home.tampabay.rr.com/mercury/teletype/

Thanks everyone!

Dave

Nope.

It is exactly what it says. You should have the schematics handy,
check 'em out, it confirms it. Its discriminator output BEFORE
de-emphasis, so it should be what you want. Level is approx line
level, if the docs are correct. Nothing is gonna turn to smoke...

Only real use of the existing IF and AGC outputs on the 8500 are for
that TeeVee accessory thingy, the IF out is 10.7 and has 9vdc riding on
it (to power the thingy), so its not an equivilant of a general output
455khz IF. Unless you have other plans for the AGC out, it makes sense
to switch the jumper. I did when I opened the radio up to turn that
bellaring beep down a bit (its LOUD). Note it only provides output in
FM mode. No AF (or agc) output when in AM, SSB, etc. modes.

>I need the output for trunked radio .
>Will this be sufficient?

Never tried it. Might just be easier (and a lot simpler) to just use a
trunk tracker for that particular application, since you usually listen
to a well-located powerful repeater and use the 8500 for more demanding
reception situations.... no added hdwe and possibly a computer involved...

Let us know how it works out in your project...

Usually by a capacitor in the range of 1 to 20 mfd. The value is not too critical as the main thing you want to do is isolate the circuit. A larger value will work and a smaller value may work depending on the external circuit.

5253. Re: pro2006 question

My original comment should have said "or" rather than "and".
I only buy scanners now that can be modified or can trunktrack.
The 2006 CAN be modified and it CAN trunktrack, so I want it.
Many of the new receivers today can't trunktrack or be modified,
so I have no use for them. The BC245XLT will be added to my
collection shortly because it can trunktrack without any other
equipment.. I also own a PRO-34, 2042 -w- OS535, a 2026,
and a 2005 -w- CE-232. These all can either be modified and/or
trunktrack. If the 2006 were to be released again today, meeting
the new FCC guidelines, you wouldn't be able to modify it for
trunktracking or anything else, so I wouldn't want the new version.

Hope that clarifies my earlier comments.

Bob Parnass did a review of both scanners. The review for
the 2006 explains the difference between the 2005 and 6:

http://w5gb.nmsu.edu/kc5kto/mods/pro2005.review
http://w5gb.nmsu.edu/kc5kto/mods/pro2006.review

One other detail not mentioned in the review due to the
timeline, is I believe the later 2006's could have the
backlight turned off rather than dimmed.

Both are excellent radios. I haven't found a 2006 at a
reasonable cost yet so I bought a 2005 at a hamfest for
$150.00. Scan speed isn't as important when you live
in an area with high traffic. Besides, who only uses 1
scanner! ;-)

Thanks Pat,
Definitely a reply I can get my teeth into. Unfortunately I have not got a schematic as I bought the radio s/h, but in general it would be beyond my understanding anyway.
As for the option of a trunk tracker you could well be right as I have spent many an hour trying to get to grips with the Trunker software freely available on the net to no avail , mainly due to my ignorance of tampering with Auto.Exe. Bat files etc. Still thats another story.
As for the Discriminator output .. As good as resolved !!

Cheers, Tom.

They are 461.6625, 469.0625, 467.7625 (J Dot bussiness Freq) 467.800, and
467.925 (Blue Star bussiness Freq.) You may want to put them in a bank in
your scanner and scan them. One store could use multiple freq. But they do
use UHF according to how small there handheld antennas are.

>Looking for Livingston County Fire,Ambulance,Police, DNR frequencies

Hi, Mike

I was hoping someone else would respond to your original posting with better information than this, but not hearing anyone else speak up, here's what I listen to up here in Hartland.

First the bad news: About two years ago Livingston County accepted an offer from the State of Michigan to use (for a price) the state-wide 800 MHz digital Motorola Astro system, which cannot be received on any presently available consumer grade receiver equipment. All police agencies in the county abandoned their previous analog frequencies.

The conversion to 800 MHz cost every household in the county about $100 for new radio equipment. The 800 MHz system doesn't work well so we will all soon be paying another $30 per household to install a tower to improve the state's repeater network. I for one don't have much confidence that this will be the end of the story.

A little good news: Fire and EMS communications still use mostly their previous analog frequencies, although the 800 MHz system is available to them and they have a limited amount of 800 MHz radio equipment to use. And, just recently, I've noticed some interesting car-to-car traffic on some of the old police frequencies, so maybe there's still some hope.

These are the pre-conversion frequencies programmed into my scanners:

01. 155.055 11. 42.64 21. 155.055 31. 155.895
02. 37.10 12. 42.68 22. 154.355 32. 156.24
03. 37.14 13. 42.74 23. 154.40 33. 158.895
04. 37.22 14. 151.25 24. 154.77 34. 159.06
05. 37.30 15. 153.83 25. 154.89 35. 154.695
06. 37.38 16. 153.875 26. 155.22 36. 159.405
07. 42.18 17. 154.01 27. 155.34 37. 453.825
08. 42.48 18. 154.22 28. 155.37 38. 462.975
09. 42.58 19. 154.28 29. 155.775 39. 463.175
10. 42.62 20. 154.295 30. 155.865 40. 146.68

All the 30- and 40-MHz MSP frequencies are now mostly silent.
Some of the 150-MHz inter-agency frequencies are used as before.

These frequencies are still much in use:

146.68 Livingston Amateur Radio Klub (with Skywarn)
151.25 Huron-Clinton Metroparks

151.625 Several itinerants (including GMPG test drivers)
154.01 Fire #1 -- Central Dispatch
154.22 Fireground
154.40 Fireground
154.295 Fireground
155.22 School buses (Howell and Hartland)
156.24 Livingston County Road Service
462.55 Community repeaters
462.975 Livingston County Ambulance Service

If you've picked up any additional frequencies down your way, I'd appreciate a posting. Not many scanner enthusiasts have the same opportunity you do of monitoring Hell up close and personal!

Good listening!

Charley, N8MQL Charley_Harp@alum.calberkeley.org

5268. F.S. RS#20-014 antennas

I have the discontinued Radio Shack roof mount all-band ground plane antennas for sale. These are new units, displayed in last catalog I have at $39.95 and are much sturdier than my Monitenna and Scantenna. The elements resemble aluminum tent poles instead of the flimsy rolled narrow guage sheet aluminum one usually sees in this price range. They also make great attic antennas if you have the space. As with any rooftop antenna it is a good idea to assemble nuts and bolts with Loctite to prevent loosening by wind action. I am selling these postage paid for $22.95 while they last.
Rich Wells has a survey of several base antennas including this model at his site www.strongsignals.net/htm/rev_bant.htm

I also have about 8 of them and two incomplete ones for parts. Got them
on clearance also. One is mounted on a tower mast and feeds my trusty
2042 and my 2045. If I wasn't fortunate enough to find these I would
gladly pay $22.95 shipped. I wouldn't bother to ship mine for $30.00
let alone $22.95. Not worth the hassle. Remember that no matter how
cheap (I mean inexpensive) the antennae is, the cableing can be quite an
expense. Don't use a good ant. with bad cable. Hope John sells all his
antennaes and those of us who already have them, well we should be
enjoying them.

Happy scanning to all
Rick

Well I had one a 235xlt and believe it was a newer one. I was told that the newer ones were modified a bit and to reduce interference or some BS. I sent it back after a week of trying to monitor frequencies that I could hear with any other scanner. Could have been a defective unit or just a really screwed up design.

for 800mhz.
dealers sell antennas to you that you don't need to buy.
If you live in a city that one is all you need.
But if you're in the burbs i then would buy an antenna
to mount outside of your home.
800mhz is for short range line of sight uses
thats way there are some many cells sites needed
800mhz range is about 20 miles more or less for
the land area

5275. 895XLT Problem?

Newsgroup: rec.radio.scanner
Date: 1999-06-20 00:00:00 UTC
From: Joel Michael Sturm <jsturm@home.com>
Message-ID: <IfWa3.1$36.151@news2.rdc1.on.home.com>
Source record: 115083

My 895 is a factory repack. I've programmed it in about five banks so far, with two of the banks assigned to trunked systems.

Let's suppose I'm listening to a trunked set of frequencies.

Let us then suppose that I want to lock out one of the talk groups, say "96".

If I press L/O, as per instructions, I get the signal "FULL".

I have not locked out any other frequencies, but, of course, the unprogrammed frequencies seem to b automatically locked out from the factory.

Let's suppose, then, that I try to unlock all. The instructions say to press L/O until two beeps are heard. I never hear two beeps. I only hear one. The instructions say then to press "E" to unlock all. I have tried pressing "E" both after and while I press L/O. What ever I do, there seems to be no change, and I cannot lock out any talk groups in trunked mode.

Am I missing something I should be doing, or do I have a defective unit?

Thanks in advance for the help.

Joel Sturm

You need to be in the trunked mode
when you hold down the L/O button
to unlock the talkgroups.I've found that
mine will only lockout 100 talkgroups
in the whole radio,not 100 in every
bank,so you should go into every
trunked bank,in the trunk mode and
holdown L/O.It's also possible that
other banks were once programmed with
some talkgroups locked out.
Hope this helped.
Randy

You need to reset your scanner. I had the same problem, called Uniden
Service, and they told me how to do it.

Turn off the scanner. Press and hold "Manual","2", and "9". Turn the
scanner on, while holding the three buttons down. Don't hold buttons more
than 5 seconds. Scanner will display "Uniden" or all Zeros.

Don't do this any more often then absolutly necessary, as I was told an
over-voltage is applied to the CPU to reset it. You can "fry" your scanner
if you abuse this.

actually we use 151.965 as Chan 1
and 151.625 as chan 2

chan 1 for all calls pertaining to store
chan 2 is for stock room only and if you want to alert other team members of
a code red or fine ass chick =)

security also uses a freq. in the 100Mhz range don't remember the freq.
though.
could get it if needed.

BTY we use Motorola spirit pro sv120 with the ctcss (think that's what it
is) board installed

Message-ID: <19990621113322.12137.00002240@ng-cq1.aol.com>
Source record: 114941

I'm selling my Unident BC-3000XLT handheld scanner. It receives from 25-550 and 760-1300 MHz, less cellular. 400 memory channels, 100 channel per second Turboscan. Automatic storage of search-discovered frequencies. It's in very good condition, comes with the manual (english only), AC adaptor, belt clip and p.o.s.-rubber ducky type antenna. I'll also give you a carrying case, and an extendable antenna which does much better than the factory one. Really a super machine. I'll take the best offer that I receive by email.

atticusja@aol.com

Hi readers,

after eight months of testing the German version, my program is now
available in english, too.

It is a freeware memory managing software with frequency database for
the Yaesu FRG-100. It offers automatic receiver-recognition, simple
operation and an "open" database in the dBase IV - format.

The system requirements are:

IBM-compatible PC (486 or higher),
Operating System Windows 95,
32 MB system memory,
12 MB free on harddisk.

You can download the program (four diskettes) at the following URL:

http://www.qsl.net/dl6mee

Please report any errors, especially concerning the translation, to:

mailto:dl6mee@yahoo.com

I have the following for sale...

WINRADIO...first edition PC card radio...receives all the public safety and cell freqs...with manual and box...used very little...these sell for $400 new...get this one for $325.00

Pro-2044...29-54/108-138/140-170/400-512...these ranges are not absolutely correct but the usual low-air-high-UHF stuff...used very little...with wall wart power supply and manual...$40.00

Pro-2026...same freqs. as above, but with 800mhz...it can be modified for cell but I don't think I ever got around to it...do not have the bracket or manual, but easy to use...this is the RS clone of the Uniden 760XLT!!! Asking $100.00

TRIDENT...this is an odd bird I got in a swap...a radar detector and scanner...it scans pre-programmed stuff only and you choose the state...have the power cord and manual...I never tried the radar part but the scanner works here at the house...$25.00

Shipping is negotiable...on some of these I would have to charge you the shipping or make nothing...I usually ship UPS-COD...you have a cashier's check or money order ready...no hassle!!!

e-mail me with questions...

cleve

Those freqs are for repeater OUTPUTS on 10 meter FM Amateur Radio systems. Satellite communications for 10 meters are lower in the band on SSB rather than FM. The two other standard repeater outputs are 29.64 & 29.68.

Hi group,

I found that when the stores had one or two left they were opened with missing parts. It can be opened if all the parts are there. For those of you who may find one like this be sure to check all the parts.

They are:
10 different mast sections
1 plastic hardware bag sealed with loose parts and 2 other sealed parts bags it.
One angle bracket which is loose in the box (This is the one usually missing).
One set of instructions.

If something is missing you can offer a buck or two to get it off their hands and hope the next store has another incomplete one with the part you need.

Good Luck
Rick

>:The fact that he is an OO is irrelevant.
>
>What is an OO?

It's a volunteer organization of ham radio operators. It stands for Official Observer. It was meant for the purposes of self enforcement. In the old days, when constructing a clean and stable radio was still an art, an OO could notify a radio operator that his rig was radiating harmonics or other such awful stuff. OO stations could also send you a note on improper operating behavior. These notes were meant to be a friendly helping hand to keep you away from being ticketed by the FCC (which they used to do in those days).

These days, the OO group is largely a bunch of self appointed RF cops. I'm a bit concerned about the noises I'm hearing of the FCC using the OO group for tracking down miscreants. It was never intended that way.

5319. Need list of all freqs for ANALOG 900 mhz handheld phones

Newsgroup: rec.radio.scanner
Date: 1999-06-21 00:00:00 UTC
From: Mentor <mentor@ccms.net>
Message-ID: <210619991619336852%mentor@ccms.net>
Source record: 114972

I have been out of the scanning loop for some time, but I was recently inspired by friend's scanner purchase to get my old and trusty Realistic Patrolman Pro-2026 out of the closet and press it into service. However, back in the day when I was more into scanning, 900 mhz handheld analog phones where barely in use at all. So I'd now appreciate any info on where I could find the list of frequencies these use, or better yet, just the plain list itself.

I also need to know how many frequencies they use or have designated to them and what frequencies are allocated to a specific manufacturer, if any.

Thanks for any help and please also e mail me your rresponse in case I don't get to check back here in time.

I had heard a rumour that APD was going to be using a trunked system by the first of the year, so I just got done calling APD's public relations office so I could get the word straight from the pig's mouth. I was told in no uncertain terms that ALL city of Austin frequencies (yep-utilities, airport cops, street crews and all law enforcement) where going to go trunked between 2001 and 2002.

There you have it, just thought I'd dispel any misinformation out there and spread the word.

>I would also be interested in this. BTW, which frequencies are used in the
>UK?

Such activity is illegal here in the US so I can only speculate but....

I've spent some time pondering just how it could be done.I think it would be much easier to use Method One: Modify an existing digital phone. Once you hacked a phone, you could probably then take it to the next step and try to crack the protocol, unless it's encrypted. If it's encrypted than forget it. The target phones reset the encryption keys each time the phone is placed in the cradle. Even if you cracked it by sheer luck, as soon as Joe Public hangs up the phone you get to start all over again. You'll have to use Method Two.

Method two requires a good working knowledge of the protocol in use, so you could sample the data coming in and bounce it against a key generation algorithm until you got a valid preamble sequence (This, BTW is how, in theory, one could decrypt DES encryption). All digital radio's need a preamble sequence so they know where each data bit starts and stops, this is their Achilles' Heel. Even so, there are millions of possible combinations. It would probably take a day or two of sheer number crunching to come up with a valid key sequence, and that would be using an intelligent algorithm, not sheer brute force. Not impossible, but for the average scannist, not really worth pursuing anyway. Unless you're in the business of selling secrets to unfriendly nations, I probably wouldn't bother trying. I mean, can you imagine waiting 2 days (or more) just to hear "Hi, you've reached 555-1212. We're not home right now, blah, blah, blah..."? No, method two has much better uses in other more interesting bands. I'll leave what they might be to your collective imaginations.... ;-)

But I can only speculate, as I said. Let us know how it goes in non-FCC land.

They must be doing it illegally then. I don't see Target listed in the FCC database.
Their parent company Mervyns is listed and they, according to the data, use UHF.

From SCANNER.FAF (frequently asked frequencies) found at

http://oak.oakland.edu/pub/hamradio/docs/misc/

FRS - Family Radio Service [95.627]

Ch Freq Ch Freq

1 462.5625 8 467.5625
2 462.5875 9 467.5875
3 462.6125 10 467.6125
4 462.6375 11 467.6375
5 462.6625 12 467.6625
6 462.6875 13 467.6875
7 462.7125 14 467.7125

The FRS was authorized on 06 June 96. It uses FM with a peak
deviation of +/- 2.5 kHz. Maximum power is 0.5w ERP.
Channels 1 - 7 are shared with GMRS.

Check out the FAF!

GSM is encrypted over the air. If you're interested in on specific call,
I suppose you could record it as it happened and then take however long
you need to break the key for decoding it. But it might take a very long
time. This isn't practical for casual listening.

However, I think that the other digital cellular standards are not
encrypted. Once you manage to reprogram a phone, you have everything
you need to listen. Not that it's going to be easy to decode and then
modify the phone's operating software - but if you can do it there is
no further security.

Today I noticed that all of the PSP patrol cars (8 that I saw) at the Pocono Barracks on the Turnpike are sporting what appear to be UHF antennas in the center of the rear drivers side trunk. They also had 2 other antennas trunk-center mounted - 1 appeared to be 800 Mhz cellular and the other appeared to be VHF.

All communications seem to still be taking place on the 159.045 repeater between the Pocono Partol cars and both "Harrisburg" and "Network Control".

Anyone know what these antennas may be? Could they be for the UHF repeater at the Lehigh Tunnel?? Or for something else?? Thoughts??

Though this is the first I have noticed them (and I travel this route at least 1-2 times a month), it is possible that they have been there for some time and I just did not see them.

Source record: 114984

Does anyone know where to obtain a custom-type connector to adapt any standard coax (PL-259, BNC, etc) to a _small_ threaded BNC-type antenna mount? I have given up on the parent company for Humminbird Radios - they built or assembled a one-of-a-kind connector to the short loaded-whip antenna on their hand-held radiotelephones. Makes it impossible to connect to a base or mobile antenna. The company refused to even provide me with the drawing-specifications of the (recessed, and hard to get to) connector on the handheld. Too bad, it's a quality tranceiver, but L.O.S. only.

The repeater on 29.62 is actually at Hinton,Ia. and is subtone access.
It is a split site set-up with the transmitter being a 100 watt Micor low
split unit.
During band openings world wide communications are possible.
Local range on ground wave is approx. 80 miles reliable.
Much sporadic skip is now occuring giving us coast to coast coverage.

>the best?

I'm looking to do the same. I'm looking at both a ground plane and a
yagi. The ground plane is omni directional and the yagi isn't.

A quarter wave ground plane for your frequency range has a 48 cm whip,
mounted vertical and connected to the coax center conductor. At the base
of the whip are four ground plane radials, also 48 cm long, mounted
horizontally, connected to the shield.

A yagi is more involved.

Wanted: A source for RR frequency (160 MHz) xtals for a Bearcat (10.8 MHz IF) scanner. Most are no longer available from RatShack and one Bomar xtal would exceed the value of the radio (a Bearcat III) which I want to donate to our non-profit model train club.

Needed: 160.230, 160.320, 160.800, 160.995, 161.070 and others!

If you have a source for these, or if you have them in your junk box and don't need them, please email at jtogyer(at)westol(dot)com. I can compensate you and pay for shipping.

Thank you!!

Greetings! I too have a BC-235 and I can tell you that even with an outside antenna, 800 trunking on our Motorola system breaks up. Fact of the matter is, it breaks up when your using the Motorola portables that are designed for the system. One of the wizards who was responsible for the purchase of our system told us that "with any new technology, there are trade offs" and system noise was one of the "trades offs" he was refering to. I am assuming that non-trunked reception is OK on your radio. If it is, and you have an opportunity to listen to your scanner while in close proximity to one of the assigned radios on your system, you may be surprised to find that the noise is on the system, not your radio. If rather, in fact, noise is present in both trunking and non-trunking modes, then you have a defective radio. Good Luck......Bob, W6JRF

Source record: 115023

Just to add to the collective wisdom, here's what I heard at the Thunderbirds air demo this past weekend:

141.850 - Team Lead
322.950 - Solos
235.250 - Ops
413.025 - Maintenance

The #5 pilot (lead solo) was absolutely crazy. First he sang over the radio (poorly, but with good humor) as the team taxied out. Then most of his commands to the opposing solo sounded like screams, hoots and hollers. He sounded remarkably like a doped-up Grover from Sesame Street. They obviously enjoy their work.

My apologies for not responding sooner, but I was dealing with an emergency and was not available.
I appreciate your concern over your purchase, but I regret to inform you that the description was accurate. It even gives approximate dimensions of the package and explains the key pads, etc. I explained what the controls were, and if you had wanted more information, then you should have asked.
I would question your practices, as you insisted on "COD" when it was not listed as a payment option, them waited for a very long time until sending payment. You sent two different addresses, one of which was not deliverable by UPS.

Just because I use a shopping mall for my UPS service should not reflect on my business practices. I use the UPS shipper that is the most cost effective and convenient for me with my schedule.

Mail fraud is a serious crime, but no more serious if using a postal money order. They are not "government funds", just a government instrument. Just because you are not happy with a purchase does not constitute mail fraud. I took one of the items to my atty, and he can see no problems with the description or the manner in how it was listed. He insists that it is a case of you not liking the item, or attempting to get something for nothing. I would urge you to read the description again carefully, and then understand your error.

As far as "getting alot of email", I call your bluff! You have prob been conversing with one individual in which the problem was an honest error and he was refunded his money. In your case, you have been attempting to get the box for free since the beginning. I do not appreciate your threatening tone, and I certainly will not react to your novice attempt at scaring me! You purchased what was listed, and I would appreciate it very much if you stop this harrassment.

Thanks for reading, and have a great day.

Target uses both UHF and VHF frequencies depending on the
state and location.

In California they use 151.965 for example.

More bang for the buck ?!?

Optoelectronics (http://www.optoelectronics.com) makes a
unit that will capture and record 100 frequencies as well as
decoding DCS (Digital Coded Squelch), CTCSS, and DTMF !!!
It will also "Reaction Tune" several scanners (ICOM, AOR,
etc) and interface with a computer for downloading of data.

All that for $399. Not bad if you ask me. Remember...you
get what you pay for.

P.S. They also have several units for under $200 that are
very good as well.

> As far as I know,the only difference is
> scan and search speeds.The 2006
> is a lot faster.
> Randy

Yep. The 2006 uses a different CPU chip and a 12 Mhz clock oscillator compared to the 7.37 Mhz clock used in the 2004 and 2005. The difference resulted in the 63% faster scan and search speeds. Then the backlight switch came along in the later versions of the 2006 rather than the dimmer arrangement. You can crank up the speed another 16% by clipping D-503 in a 2006, and by 25% in a 2005 by adding a diode in the empty D-501 slot on a 2005. If the scan speed difference isn't that big of an issue, you can usually get a 2005 for a lot less money than a 2006.

Repeaters. With the current sunspot cycle, 10meters (29mhz) and 6m (50mhz) will be providing all sorts of global communications. One way to identify the repeater location is to listen for the ID (usually cw) and to look up the call sign at www.qrz.com.

For 29.62 here are SOME of the repeater locations.

LA
Denver
Miami
Rockford, IL
Sioux City
New Orleans
Memphis

Unprotected solid state electronics are VERY sensitive to static and
overvoltage protection. However in the 60's, solid state design was
quite crude.

>I am not an expert but I have read a little on the subject. quite
interesting

If you've been reading, you should know that prior to the late 60's or
early 70's, almost all lightning research was based on high voltage
discharge scenarios. Researchers just couldn't understand why what
they were doing didn't apply to reality. Then the University of PA got
loan of a locomotive to use as a generator and started doing test at
only hundreds of thousands of volts, but that hundreds of thousands of
amps with super clean and fast rise times. As a result, almost
everything
that was 'assumed' as fact about lightning from the 30's on was
re-written, especially with how it interacts with the power grid.

With the grid even more critical today, more heavily loaded, and more
solid coverage, outages aren't near what they used to be. And this is
not an idle observation. I used to work for PP&L (Pa Power and Light).

Back in the summer of 1972 I was a 'junior engineer' with them, and for my summer job I was updating maps (manually back then) and doing load figures. I learned how all the devices on the grid worked, like OCRs, and how they handle lightning hits. After that I was also cognizant of looking for the cycling in thunderstorms. But you know, I don't see NEAR the problems now (as a consumer) that I used to back then. I don't know what the power companies are doing now, but it's obviously different, and much better.

True, but how many times does that happen? And it's usually load
related.

Back in the 70's, when I learned how the system worked, I'd see
practical
evidence of that knowledge almost every single thunderstorm. Now...

>"Beware of the massive impossible!"

The OO organization is still active, and while there is some good that comes out of it, you're probably right in your assessment. I've seen some real toads as OOs.

In fact, I got a warning for failure to ID. I had gone out of range of the
repeater, and the assinine OO was listening ONLY on the repeater, so he COULDN'T know if I sent an ID or not. I believe I did, on the frequency "I" was transmitting on, NOT on the repeater output. The OO just couldn't understand the fact that I'm only responsible for sending an ID on the frequency I'm transmitting on. (At least, that's how I read the rules.) RF cops. Actually, RF Cop wanabees.

But that's not to say all OOs are like this. ANY organization tends to reflect a cross section, even if it is weighted. And there are a number of competant OOs out there. But then, you won't notice the guys who do thier job quietly and efficiently, right?

As to the FCC, I don't think they will rely on the OO for enforcement, but OO reports may trigger enforcement or at least investigative action by the FCC. In which case, if it does go to court, the OO had better have is act together.

I linked to their home page via the StrongSignals vendor list. They advertise that they guarantee delivery of unblocked scanners in the US. I emailed them and asked specifically what this meant, and the reply was that they assume all customs risk, and that they would replace any confiscated merchandise at their expense.

Is it really that simple? In order to make such a statement, it seems that they are pretty sure that their shipments will not be scrutinized.

Has anyone ordered from them? What did you buy, and what was your experience?

best regards,

Marty Jones

I don't think they have to be listed in FCC database if they are using itinerant frequencies, which is what 151.965 is. They have to register with the FCC, but the freq is so low power and so commonly used that it would be pointless to list the thousands of users for each state. Rest assured, Target is not transmitting illegally.

I have never done such a thing. I did witnes one occasion when I plugged
into a system that a teenager reverse wired causing some problems. But
that was nothing of my doing.

> Still seem to be dodging what you do for a living

What does that have to do with anything?? If we discuss waht I do for aliving
then we would need to discuss what YOU do for a living also.

> How many FCC licenses?

At this time I hold TWO valid operator licenses from the FCC. I have passed4
others. How many do YOU hold?

I had a list of the frequencies used by security
and maintenance for all the Philadelphia-Bucks
County Pa. area Malls and Shopping Centers, I
believe it was posted here a year ago.

However I recently went to look for it and canï¿½t
find it.

If anyone could repost that list or a new list of freqï¿½s
for the local Phila/Bucks Pa. Malls, Shopping Centers,
and Stores, I sure would appreciate it.

I remember Franklin Mills was 464.4125 and
I think Neshaminy Mall was 464.475 but thatï¿½s
about all I can recall.

Thanks,

Henry

See FCC Rule section 90.113.

Station authorization required.
No radio transmitter shall be operated in the services governed by this part except under and in accordance with a proper authorization granted by the commission.

151.925 is listed in part 90.35 and needs a license.

Also, since 151.925 is an itinerant frequency, see the following definition under section 90.7.

Itinerant operation. Operation of a radio station at unspecified locations for varying periods of time.

The confusion stems from not having to have this frequency coordinated by an approved FCC coordinator.

Ed

Yeah yeah, as usual blame it on somebody else. What problem did YOU obseve liar-John? You obseserved after YOU plugged it in a Micor and power supply burning up. Nobody with an ounce of brains would be plugging stuff into a power supply if the weren't CERTAIN of the polarity especially ham radio stuff where morons like you don't have a clue.

> > Still seem to be dodging what you do for a living

Any time pal. I am not ashamed of what I do John-Bowl, why do you hide what you do??

> > How many FCC licenses?

> At this time I hold TWO valid operator licenses from the FCC. I have
passed4
> others. How many do YOU hold?

At this moment I am holding three FCC licenses. I have passed 6 FCC tests. So what John-Bowl. It doesn't mean squat. Yours mean even less. You are a liar and know nothing about scanners. Take the pills Chief-John-Bowl. Take all the pills, find more and take them. You can do it John-Bowl. End the pain!

From: David Stark
To: All Msg #559, Jan-04-94 18:25:00
Subject: RS Freq. Counter HOLD modification

Evidently the Radio Shack PRO-200x scanners are not the only easily modifiable equipment available. RS seems to be establishing itself as a "hacker's paradise" as they introduce still another type of equipment that is amenable to user modification.

* Forwarded from "rec.radio.scanner"

How to add a hold function to the Radio Shack RF Frequency Counter:

Ground TP 17. In the schematic, TP17 is pin one of U3, connected to +5V thru a 47k resistor. On the circuit board, TP17 is on the display side, just right of the lower-right corner of the IC. Grounds are about 1/4 inch below and to the right, the three non-tinned points in the large area of metal. TP17 is the tinned pad next to a SM resistor marked '473' for 47k.

I rigged a momentary switch to ground TP17 thru a 1k resistor (you never can tell) and it works just fine! I drilled a small hole to mount the switch just above the plastic depression so I could push the button with my right thumb. A small toggle switch would fit if you want to hold longer.

Galen, KF0YJ

--- GEcho 1.00
* Origin: NF2G / KNY2DJ / NESN NY-RC02 / KYR-7128 (1:2613/333.2)

-Note from Ted: This mod does work. I did quite a few of them for customers back when I had my radio shop here in Chicago. Used to use a radio shack push on / push off miniature pushbutton switch. I was told by an engineer that it's unwise to leave it in the new "hold" mode for more than a few minutes (not hours). The hard part is drilling through the flipping steel case to mount the switch. This thing is built like Fort Knox, I swear it's case hardened steel,

amazingly tough. Have fun and be careful. Good old Dave Stark and the Fido net, I do miss those bygonne days. Mods will no doubt void the FCC type acceptance/approval (what ever, nit pickers!) / big deal, who cares.

"I'll just get my electric drill and these tungsten carbide bits and a hammer and we'll start modifying your delicate radio equipment..."

(Never failed to generate that great look of shock on the customers faces - great fun, especially when they'd hear that old Black and Decker drill start whirring away!)

Happy Scanning - Ted

Hey Jeff:

Wanna trade that TrunkTracker for some older technology?

If I were in NYC I would go for a BC9000....just my opinion.

Here's what I have to trade:

Uniden BC9000XLT - Like new, in box with manual - $300.

Uniden BC9000XLT w/ CTCSS module - Like new, in box with manual - $350.

I also have a number of handheld amateur HTs if you're interested.
If you're wondering why I'm selling off this stuff, I've been out of work for almost 7 weeks and need to pay bills.

Sorry, I should have been more specific in what I said. If you read further down in my post, I say that they *do* have to register with the FCC. Having worked for Radio Shack for a short time and having sold these radios, I am well aware of that fact. However, that does not necessarily mean that the online FCC databases have to list them. So I'm not disagreeing with you -- On the contrary, I'm reaffirming what you say.

I'm just speculating that perhaps it would require far too much work or database space on their part (the FCC or any private company with an FCC database, such as Percon) to list the thousands and thousands of users (just for one state) of various itinerant frequencies. This is not verified fact, just my humble opinion (the database part).

What to listen for
Here is some information that might be useful while listening to
Bethlehem's trunked radio system.

EMS units are dispatched on either an alpha, bravo, charlie, or delta
response to a call. A delta response is the most rapid response, an alpha
response is the most cautious.

Moravian College campus security, Lehigh University campus security,
and Bethlehem Area School District security all use Bethlehem's trunked
radio system.

Here is a list of unit numbers you will hear, and what department uses
them:
100's and 200's - Police Department (Unit 200 is the Comm. Center)

100's, 200's, 300's - Fire Department
400's - Parking Authority
500's - Moravian College Campus Security
700's - Paramedics
800's - Lehigh University Campus Security
900's - Bethlehem Area School District Security

Bethlehem's Radio Codes
Here is a list of radio codes used in Bethlehem.

5396. ????????Maybe Another Cheek-a-like blunder in Mackeys Hometown of Sioux City???????

Newsgroup: rec.radio.scanner
Date: 1999-06-22 00:00:00 UTC
From: Rick Larson <ricklarson@cableone.net>
Message-ID: <930093479.194.28@news.remarQ.com>
Source record: 114822

There was absoluetely no evidence that any cheek-a-like supplied equipment or software in this case.
http://www.siouxcityjournal.com/LocalNews/pleads.html

Former juvenile court officer pleads guilty

The former chief juvenile court officer for the 3rd Judicial District pleaded guilty Monday to bank fraud and secret interception of a cellular phone communication.
Daniel J. Conway III, 57, of Sioux City entered his pleas in U.S. District Court in Sioux City. Conway had been charged with the crimes Friday.

U.S. District Judge Mark W. Bennett accepted his pleas along with a plea agreement between the federal government and Conway. Details of the agreement, signed by Conway on May 20, were not released.

From March 14, 1995, through May 30, 1996, Conway began obtaining money from state funds and began using it for his own expenses. The amount obtained reached $19,351, according to court documents.

Conway was drawing on funds established in 1993 in a credit union, funded in part by Woodbury County through the Iowa Department of Human Services. The account had been set up to buy items for juveniles.

Conway obtained blank checks, signed the name of the person authorized to sign the checks or directed that person to endorse a blank check. Conway then made the checks payable to himself.

On May 24, 1996, Conway intercepted a cellular phone conversation between two individuals connected with Juvenile Court Services. One of the people involved in the phone conversation later was fired.

Conway was chief juvenile officer from 1986 through 1996. During that time, major innovative programs for at-risk youths were implemented. He then served as vice president of public relations for Boys and Girls Home and Family Services through October 1997.

That month, an audit done for the county revealed that Juvenile Court Services was being investigated for potential misappropriations and questionable expenditures of county money. The investigation and a state audit had been ordered by the judges of the 3rd District.

The state audit, released Oct. 29, 1997, found questionable, unauthorized and/or fraudulent transactions made from April 1, 1993, through Nov. 30, 1996. The audit said that $835,000 had been paid to the Sanford Center for special-needs juveniles without proper documentation. The audit also found

$19,427 in fraudulent expenditures had been traced to Conway's personal checking account.

Bank fraud carries a maximum penalty of 30 years in prison or a $1 million fine or both. The cellular phone call interception call carries a maximum penalty of a $5,000 fine.

Conway's sentencing was scheduled for Sept. 15.

>an updated 235 planned, one with a better receiver? Thanks.....

I have two trunked systems in my area that I listen to. The County-wide system, and the local City system. There is noise like you describe on the County-wide system, even when I drive past the transmit antenna site. The local City system is clean. I get the same result on three different models of trunk-tracking scanners. It is just something with the system. Your BC 235 is probably ok.

The City system gets noisey at about 15 miles away, on my mobile, or on my BC 235. I bought a cell antenna from Radio Shack, and now I can receive the City system from greater distances.

Perhaps you are expecting too much from the rubber duck on the 235.

The radios are made to only transnit in certain frequency ranges. There are lots of ham radios that can receive all kinds of frequencies, but not transmit on all of them.
You are better off not being able to do this. It would only get you in big trouble.

A microwave oven is a 600-900 watt, 2450 MHz radio transmitter. It would cook your brain if you could get the interlock defeated so it would start up with a head in it.

You can have wonderful fun with a green grape in a microwave oven, if you slice it in half the long way. Lay the two half-grapes in the oven flat side up, with the two ends touching each other, and cook it for 10 seconds.

You will observe that sparks fly between the two half-grapes.

The way it works is that each half of the grape is 1/4 wave long, so the two halves form a 1/2 wave dipole antenna. The point where they touch receives a couple kilovolts of electricity, so it arcs over.

When using the trunk tracker scanner can you program the 10 or 20 channels to the -45Mhz input frequency? More specifically can the data channel be programmed to order the receiver to the input channel as opposed to the output channel? 866.000-45.000=821.000 If not I guess itï¿½s a good idea to hang onto the old Pro 43!

>
> Thanks!

Don't want to burst your bubble, Rick, but if you can find someone willing to part with a 2006 with the full blown 456 board, you're looking closer to $425-450 based on what I've seen them going for. They've even bought over $500 on eBay (if they don't get canceled first!).
Since the full 456 board is no longer being produced, people are either hanging on to them or selling them for a premium price. If you find one for $350, don't take another breath, snag it before someone else does. With bare 2006's going for right at $300 these days, that would be a steal. Good luck in your search!

I called Uniden Customer NO-service today after no response to my e-mails to ask who carries their products in my area.

I pressed "0" for operator. My position in the cue started at 7. is slowly went down but at one time it actually went up one number. After 27 minutes, the recording stated that my cue position is zero!!! I kept getting that for one hour before I hung up.

I thought that if someone is first cue, that would mean that they are the next one to be taken care of.

5410. WTB: Handheld Trunk Tracker Scanner or.....

Source record: 114836

I am looking for a used Trunk Tracker Scanner, either a Uniden or Radio Shack model. I just sent my BC235XLT in for servicing and need something until I get my scanner back from repair. I will also consider a high end "traditional" scanner (such as a BC3000XLT or RS PRO-64) or a wide-range handheld scanner/receiver. Something I can use in conjunction with my BC235XLT (when I get it back) would make more sense, but I will take anything I can get at the moment.

Please reply to me privately.

Thanks for your time and hope to hear from some of you real soon.

From: wa3ysu@nospam.hotmail.com
Message-ID: <3770d285.3390899@news.erols.com>
Source record: 114846

Today I noticed that all of the PSP patrol cars (8 that I saw) at the Pocono Barracks on the Turnpike are sporting what appear to be UHF antennas in the center of the rear drivers side trunk. They also had 2 other antennas trunk-center mounted - 1 appeared to be 800 Mhz cellular and the other appeared to be VHF.

All communications seem to still be taking place on the 159.045 repeater between the Pocono Partol cars and both "Harrisburg" and "Network Control".

Anyone know what these antennas may be? Could they be for the UHF repeater at the Lehigh Tunnel?? Or for something else?? Thoughts??

Though this is the first I have noticed them (and I travel this route at least 1-2 times a month), it is possible that they have been there for some time and I just did not see them.

Amen my brother, if I want to broadcast on any band I choose,
reguardless of its legality, thats my fucking decision. And nobody short
of the police have the right to impose limitations on my freedom of
choice. Besides not all broadcasts on police bands are sinister in
nature. What if a burgular cut my phone lines(not too uncommon), and I
need to reach the police? Not everybody has/can afford a cell phone, but
a ham radio operating in the police band could provide that neccessary
communication. Better to be judged by 10 than carried by six. Or
something like that.

>need to block me out of frequecies I don't want to listen to.

.as you peel or burn off the epoxy make sure you don't disturbe all the tiny
little wires that connect the microchip to the circuirboard. This is the same
cheap way they assemble calculators. They take the actual microchip and epoxy
it to the circuit board then connect it to the traces with very fine wires.
This elimiantes putting the chip in a carrier and then soldering it to the
board or putting it in a socket..the drawback is there is NO repair once it
goes bad, the advantage is it's very cheap. You just toss the circuit card and
put a new one in...of course if you damage it while screwin' with it it's your
loss.......enjoy.....

Lame is right! Only $65 for a radio that sells for $329, plus a $25 case?
Maybe $165 might be a starting point, but I got $200 for my BC3000XLT when I
sold it a couple months ago.

>mount?

Probably a TNC connector - looks just like a BNC, but its threaded instead
using the bayonet type sleeve to secure it. Most likely a TNC male to
BNC female adaptor is what you are looking for.

Occasionally found on specialized types of gear. I've even seen one
that employed a _reverse_ thread to prevent hooking standard stuff to it.

It could be, if its a REALLY tiny (connector and everything about 1/4 inch
in diameter) an SMC (?) connector - often seen for low power UHF internal
interconnections, etc. in quality/precise type UHF gear.

Check them out at a well-stocked parts dealer.

Hope this helps...

It could be the unit is not type accepted for use with an external antenna.

I suppose you have tried an SMA connector?

You *could* take it to a radio shop to see if they could/would change out the connector for you.

When you have the proper license, you get to transmit. Otherwise, you don't.

The radios you mentioned are ham rigs??

If so, and you are a ham, you should be able to answer your own question. If so, and you are not a ham, why buy the rigs in the first place? A similar question would apply if they are commercial band rigs . . .

Bill

PS Guys, you do remember the recent thread on this very subject . . . Let's not have a repeat, OK?

>With the grid even more critical today, more heavily loaded, and more
>solid coverage, outages aren't near what they used to be.

Wasn't there a huge multi-state outage in the west last year? If I remember right it was ONE failure that brought down the power for a huge section of the western United States. It may have been two years ago. In any case I really admire the power crews who go out in in the middle of the night in thunderstorms and ice storms to get the power back on. Always keep the local power crews frequencies in your scanner, lots of action in bad weather and you may even get an idea when your power will come back on.
later.......

Please be advised that many updates have been made to the Minnesota Radio Monitoring Page, including the addition of several local and county police agencies, as well as a very detailed Media section, MSP Airport and Ham Radio sections.

If anyone has an interest in monitoring in Minnesota or will be visiting anytime soon, please feel free to stop by and check the page out. It can be found at http://www.scanfan.com

Thanks very much.

The UHF antenna that you noticed is used for the UHF extender aka mobile repeater. The Troopers now have UHF portables that they use while out of the vehicle, the mobile repeater allows them to use the VHF system through the mobile radio. I don't know what frequency the portables are on however. -Dan- KE3UC

Thought you'd never ask:

Description of GSM Security Features
The security aspects of GSM are detailed in GSM Recommendations 02.09, "Security Aspects," 02.17, "Subscriber Identity Modules," 03.20, "Security Related Network Functions," and 03.21, "Security Related Algorithms". Security in GSM consists of the following aspects: subscriber identity authentication, subscriber identity confidentiality, signaling data confidentiality, and user data confidentiality. The subscriber is uniquely identified by the International Mobile Subscriber Identity (IMSI). This information, along with the individual subscriber authentication key (Ki), constitutes sensitive identification credentials analogous to the Electronic Serial Number (ESN) in analog systems such as AMPS and TACS. The design of the GSM authentication and encryption schemes is such that this sensitive information is never transmitted over the radio channel. Rather, a challenge-response mechanism is used to perform authentication. The actual conversations are encrypted using a temporary, randomly generated ciphering key (Kc). The MS identifies itself by means of the Temporary Mobile Subscriber Identity (TMSI), which is issued by the network and may be changed periodically (i.e. during hand-offs) for

additional security.

The security mechanisms of GSM are implemented in three different system elements; the Subscriber Identity Module (SIM), the GSM handset or MS, and the GSM network. The SIM contains the IMSI, the individual subscriber authentication key (Ki), the ciphering key generating algorithm (A8), the authentication algorithm (A3), as well as a Personal Identification Number (PIN). The GSM handset contains the ciphering algorithm (A5). The encryption algorithms (A3, A5, A8) are present in the GSM network as well. The Authentication Center (AUC), part of the Operation and Maintenance Subsystem (OMS) of the GSM network, consists of a database of identification and authentication information for subscribers. This information consists of the IMSI, the TMSI, the Location Area Identity (LAI), and the individual subscriber authentication key (Ki) for each user. In order for the authentication and security mechanisms to function, all three elements (SIM, handset, and GSM network) are required. This distribution of security credentials and encryption algorithms provides an additional measure of security both in ensuring the privacy of cellular telephone conversations and in the prevention of cellular telephone fraud.

Authentication
The GSM network authenticates the identity of the subscriber through the use of a challenge-response mechanism. A 128-bit random number (RAND) is sent to the MS. The MS computes the 32-bit signed response (SRES) based on the encryption of the random number (RAND) with the authentication algorithm (A3) using the individual subscriber authentication key (Ki). Upon receiving the signed response (SRES) from the subscriber, the GSM network repeats the calculation to verify the identity of the subscriber. Note that the individual subscriber authentication key (Ki) is never transmitted over the radio channel. It is present in the subscriber's SIM, as well as the AUC, HLR, and VLR databases as previously described. If the received SRES agrees with the calculated value, the MS has been successfully authenticated and may continue. If the values do not match, the connection is terminated and an authentication failure indicated to the MS.

The calculation of the signed response is processed within the SIM. This provides enhanced security, because the confidential subscriber information such as the IMSI or the individual subscriber authentication key (Ki) is never released from the SIM during the authentication process.

Signaling and Data Confidentiality
The SIM contains the ciphering key generating algorithm (A8) which is used to produce the 64-bit ciphering key (Kc). The ciphering key is computed by applying the same random number (RAND) used in the authentication process to the ciphering key generating algorithm (A8) with the individual subscriber authentication key (Ki). As will be shown in later sections, the ciphering key (Kc) is used to encrypt and decrypt the data between the MS and BS. An additional level of security is provided by having the means to change the ciphering key, making the system more resistant to eavesdropping. The ciphering key may be changed at regular intervals as required by network design and security considerations.

Ciphering Key Generation Mechanism
In a similar manner to the authentication process, the computation of the ciphering key (Kc) takes place internally within the SIM. Therefore sensitive information such as the individual subscriber authentication key (Ki) is never revealed by the SIM.

Encrypted voice and data communications between the MS and the network is accomplished through use of the ciphering algorithm A5. Encrypted communication is initiated by a ciphering mode request command from the GSM network. Upon receipt of this command, the mobile station begins encryption and decryption of data using the ciphering algorithm (A5) and the ciphering key (Kc).

Subscriber Identity Confidentiality
To ensure subscriber identity confidentiality, the Temporary Mobile Subscriber Identity (TMSI) is used. The TMSI is sent to the mobile station after the authentication and encryption procedures have taken place. The mobile station responds by confirming reception of the TMSI. The TMSI is valid in the location area in which it was issued. For communications outside the location area, the Location Area Identification (LAI) is necessary in addition to the TMSI.

(and now the good stuff)

Key Length
This section focuses on key length as a figure of merit of an encryption algorithm. Assuming a brute-force search of every possible key is the most efficient method of cracking an encrypted message (a big assumption), Table 1 shown below summarizes how long it would take to decrypt a message with a given key length, assuming a cracking machine capable of one million encryptions per second.

Table 1 Brute-force key search times for various key sizes Key length in bits and the Time required to test all possible keys
32 40 56 64 128

1.19 hours 12.7 days 2,291 years 584,542 years 10.8 x 10^24 years

The time required for a 128-bit key is extremely large; as a basis for comparison the age of the Universe is believed to be 1.6x10^10 years. An example of an algorithm with a 128-bit key is the International Data Encryption Algorithm (IDEA). The key length may alternately be examined by determining the number of hypothetical cracking machines required to decrypt a message in a given period of time.

Table 2 Number of machines required to search a key space in a given time Key length in bits
1 day 1 week 1 year
40 13 2 -
56 836,788 119,132 2,291
64 2.14x10^8 3.04x10^6 584,542
128 3.9x10^27 5.6x10^26 10.8x10^24

A machine capable of testing one million keys per second is possible by today's standards. In considering the strength of an encryption algorithm, the value of the information being protected should be taken into account. It is generally accepted that DES with its 56-bit key will have reached the end of its useful lifetime by the turn of the century for protecting data such as banking transactions. Assuming that the A5 algorithm has an effective key length of 40 bits (instead of 64), it currently provides adequate protection for information with a short lifetime. A common observation is that the "tactical lifetime" of cellular telephone conversations is on the order of weeks.

The technical details of the encryption algorithms used in GSM are closely held secrets. The algorithms were developed in Britain, and cellular telephone manufacturers desiring to implement the encryption technology must agree to non-disclosure and obtain special licenses from the British government. Law enforcement and Intelligence agencies from the U.S., Britain, France, the Netherlands, and other nations are very concerned about the export of encryption technology because of the potential for military application by hostile nations. An additional concern is that the widespread use of encryption technology for cellular telephone communications will interfere with the ability of law enforcement agencies to conduct surveillance on terrorists or organized criminal activity.

A disagreement between cellular telephone manufacturers and the British government centering around export permits for the encryption technology in GSM was settled by a compromise in 1993. Western European nations and a few other specialized markets such as Hong Kong would be allowed to have the GSM encryption technology, in particular the A5/1 algorithm. A weaker version of the algorithm (A5/2) was approved for export to most other countries, including central and eastern European nations. Under the agreement, designated countries such as Russia would not be allowed to receive any functional encryption technology in their GSM systems. Future developments will likely lead to some relaxation of the export restrictions, allowing countries who currently have no GSM cryptographic technology to receive the A5/2 algorithm.

Conclusion
The security mechanisms specified in the GSM standard make it the most secure cellular telecommunications system available. The use of authentication, encryption, and temporary identification numbers ensures the privacy and anonymity of the system's users, as well as safeguarding the system against fraudulent use. Even GSM systems with the A5/2 encryption algorithm, or even with no encryption are inherently more secure than analog systems due to their use of speech coding, digital modulation, and TDMA channel access.

you can find it all at (pictures too).....

Also, even apart from questions of legality, proper usage, etc., it's easier to build a receiver that works on a wide frequency range than to build a transmitter that works on a wide frequency range. This is especially true in the VHF/UHF range and for FM.

>only of use for real "enthusiasts"

Hmm. My experience with WACARS has been very disappointing. So far, it has never decoded a single complete transmission, and the map has never shown anything at all. I've left the program running for hours at a time and gotten nothing but garbage on the screen. KRACARS, on the other hand, has been about 90% reliable, although it has none of the fancy functions of WACARS. I'm running both on a 233 MHz Pentium with lots of RAM, so I should have enough power, especially when WACARS is the only application running.

Did you look at the site? Various police agencies are deliberately placing
their CAD and radio traffic online for public consumption. Mr. Pinero is
not talking about "hacking" into confidential police information.

5471. Re: WHO IS BILL CHEEK?????

He is a San Diego resident who has been a great contributer to the scanning/radio hobby.

(This comment is about the FED's) again the Feds have forgot that it is a Government by the people for the people,....NOT a government by the Government for the government agains't the people. Just my opinion. Less government is the best government. The constitution was written to keep the government limited on it's ability to hold back it's people so they stay the hell out of our way! They keep forgeting that.

Is this connector actually a coaxial design?? From your description it sounds like it might be a TNC(Threaded Navy(?) Connector) These are quite common in Cell phones and some other Commercial radios(including Marine radios?) They are mechacanically more reliable than BNCs. If this is the case, you can get TNC/BNC adaptors at RS and other places.

I spent two hours on the phone today. The best price I found so far was from Global Wireless, they are taking pre-orders at $220.00 FREE shipping. They also said they would match anyones price. Here is what I found, after several calls only three dealers even could give me a price...

Grove $229.95 plus $12.00 shipping (Seems like a heck of a lot for shipping)
Scanner World $219.95 plus $10.00 shipping (again this is a lot for shipping)
Global Wireless $220.00 FREE shipping

Their web page is at http://www.gwltd.com/gw phone is 309-762-6010
I bought my BC-235 from them and also several parts for my C-band satellite system, they have always been great to work with....

Tired of ebay.com canceling your scanner auctions on the last day without even warning you. If so you might want to try this link http://www.eboneyard.com It's a FREE Radio Listing Service in a nice web page format. Pictures, crossposting and more. There is even a separate category for scanners. Give it a try, you've got nothing to lose and a sale to gain !

Visit The SCAN SHACK
A FREE scanner information web page.
Frequency restoration mods with illustrations,
virtual down conversion info & more at:

http://members.aol.com/scanshack

Happy Scanning !

5487. Re: why can I hear the police but not transmit

chris_grant@my-deja.com wrote:

:I am new at this, just picked up a pair of 70cm ADI's. I can hear al the
:police bands but I can not transmit to them(I know this is illegal, but
:its just an intelectual question). Does is have to do with CTCSS
:encoding or is there some other kind of filter they use to prvent this
:sort of "interference"? DSP? Some sort of chip only police radio's have?
:Thanks in advance for any info.

Many 70cm Tranceivers have a wide band receiver but for obvious reasons
are disabled from transmitting outside the amateur band.

>They must be doing it illegally then. I don't see Target listed in the FCC database.

You must not have a very good extraction of the database, or you're
not searching it correctly. My copy of the PerCon Spectrum CD-ROM
contains a whole bunch of entries for Target Stores.

>Their parent company Mervyns is listed and they, according to the data, use UHF.

IIRC, the Dayton-Hudson Company is the parent of both Target and
Mervyn's.

There was a web site dedicated to this kind of stuff. The first thing
I remember seeing was the PopTart BlowTorch posting. Some
guy defeated the kickout on a toaster and turned it into a mini-forge
with a PopTart.

Impressive. Totally stupid. But fascinating.

The web page had a bunch of other neat things to do like grapes in the microwave, and other things that I can't remember now. I don't have the URL handy, and I don't even know if it exist anymore, but I'm sure if you're REALLY interested you could find it.

I have a DX 394 tabletop SW radio that I would like to trade for a handheld trunk tracker scanner.

DX 394 is in excellent shape, come with manual, telescoping antenna, and box. DX 394 covers 150KHz to 30,000 kHz. It has AM, USB,LSB, CW1 and CW2 modes. Selectable step sizes from 10 kHz to 0.1 kHz. Lighted display, signal strength indicator, 160 memories, timer, sleep timer, dual clocks, tuning knob.

Will also consider selling the DX 394.

Thanks,

D.Schopp

All Orange County Police 'copters may use 45.30 (PL 146.2), the "Regional air net" frequency.

HBPD's copters "Regional 1, 2 & 3," use the regular HBPD freq, 460.100 & "Orange South", 460.200.

Transmit video? Wouldn't be surprised....anyone??

ALSO, the "HBPD Radio Scanner" will soon be added, according to their homepage, http://www.hbpd.org/

>Wouldn't it have been easier to tell him to get a LIFE instead?

In most cases yes, but in the case of digital monitoring, there actually is a technological challenge to face, unlike the snip a diode, clip a resistor world of analog cellular monitoring. If I were to solve that puzzle, yes, I'd feel a sense of accomplishment about that.

If this guy wants to do it to be a snoop, then yeah, he needs a life. But if he's trying to do it just to prove it can be done, I say go for it. That's what scanning is all about - striving to learn more about all facets of radio.

Did you check the phone book? Look under Communications Equipment Sales and
Service. They'll usually have nice big yellow pages ads, but at worst,
you'll have a list of phone #'s to call and inquire.

I've spoken to Unidens' customer support before and I got right in. I guess
it's a matter of when you call.

> Yeah yeah, as usual blame it on somebody else.

If I was specifically trying to blame somebody as you state, I would have mentionedthier name. I stated facts, then & now. You have only stated your ranting & raving.

When was the last time you made an on-topic post???

> burning up. Nobody with an ounce of brains would be plugging stuff into a
> power supply if the weren't CERTAIN of the polarity especially ham radio

If you were hooking up a piece of equipment to a commercially made powersupply, wouldn't you expect the red to be positive and the black to be negative??

I did expect the red to be positive & the black to be negative. Now if you are saying
that such expectations are not "with an ounce of brains" then you are calling a LOT of people with your statement!!!

> > then we would need to discuss what YOU do for a living also.
>
> Any time pal. I am not ashamed of

How come you have never mentioned it?

> At this moment I am holding three FCC licenses.

I was speaking about OPERATORS licenses, Glenn!But anyway, Glenn, what are the 3 licenses you have "at this moment"?

From: huey <huey@NoSpam.com>
Message-ID: <3772EBB5.EAEDEF3@NoSpam.com>
Source record: 114541

I just bought a BC-235XLT without a manual.
Can someone explain to me what a scanlist is?
I live in Vancouver, WA.
I hope I have the correct frequencies programmed in
or have them all programmed in. Info from Radio Shack.
Does someone have the frequencies that they are sure
worked for Portland/Vancouver?
I hear a lot of bus/meter reader shit that I want to avoid,
how do I do that?

thanks

From: Ricky Nickolson <rnick@entercomp>
Message-ID: <3772e858.0@newsman.viper.net>
Source record: 114543

When searching with my old trusty bearcat 160 scanner (I know, I know, but I can't afford anything else right now!) in the 45.000 to 49.000 range, with the squelch button pressed as high as it will go, it keeps stopping on "noise". Is this actual transmissions flooding this frequency range, or might there be a problem with the radio. It doesn't seem to be a problem when searching higher frequencies, just this range...

thanks for any help.

Ricky.

Source record: 114544

It is most likely called a "Birdie". This is a internal self generated signal/noise. If you look in you scanner man., you will most likely find that the frequency that is stopping on is listed in the scanner manual. You can't change this, it is a inherit problem with the design. Any other questions just e-mail me.
WB6SUB - Trevor

5550. AOR AR1000 for sale

Newsgroup: rec.radio.scanner
Date: 1999-06-24 00:00:00 UTC
From: Mark Peterson <jmarkp@home.com>
Message-ID: <37719626.5EF03E0C@home.com>
Source record: 114674

AOR AR1000 is a handheld scanner covering the range .5-1300 MHz
continuous. Reception modes are AM, FM, WFM selectable
independently of the frequency received.

Scanning steps can be programmed from 5 to 955 KHz. Ten banks of memory
(100 channels each) gives a total of 1000 channels.
Search modes and scan modes include lockout and selectable resume. LCD
display shows frequencies and mode parameters.

Controls include volume, squelch, attenuator, and earphone jack. Power
is supplied from either four internal AA cells (nicads provided), or
external 11-15V DC supply. Unit is 100% functional and cosmetically
excellent. Accessories include Copy of manual, AA nicads, soft
case, rubber duck, and telescoping antenna, wrist strap, belt clip,
power adapter, and original box. Buyer to pay actual shipping.

Asking $225.00

make inquires to:

jmarkp@home.com

When you used the words "cheat, idiotic, lying, deceitfull" were
you talking about Bill Cheek or Bill Clinton?

Trevor Harris wrote:

Are there two Bill Cheek's that are scanner hobby geeks living
in the San Diego area? We're talking about the one who wrote the books
& caused all the problems on this NG.

Hi folks,

At the following site (incl. photos):

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=122218261

the following is up for bid:

5 Motorola Syntor X2 (800Mhz Trunked FM Two-Way Radio)*
2 Motorola Syntor X (800Mhz Trunked FM Two-Way Radio)*
1 Motorola Syntor X Owner's Manual (factory-direct new copy)
1 Motorola Syntor X/X2/X3 Instruction Manual plus Revision (new)*
1 Maxtrac 35W 10-Fleet Trunked Mobile Unit w/Scan*
1 Maxtrac Operating Instructions Book (new)*
1 Mostar 15W 20-Channel Subfleet Trunked Mobile Unit*
1 Mostar Owner's Manual (new)*
1 Mostar Laminated Operater's Reference Guide 6x8 (new)
2 Motorola Desktop Mics*
1 Base Power Supply 110V Input w/14.2 VDC Output
1 Box of Wire Harnesses
1 Master Key to All Radio Locks

"...all of the above was in excellent working condition when it was uninstalled. These items are, in our estimation, clean. They are not greasy or grimey and have been gently wiped down. There is no reason to our knowledge that any of the wires should be missing, but we cannot guarantee that they are all there. In one picture, there is a wire harness nicely coiled, but the rest are together and uncoiled in a box ready for shipping. Also note that 2 of the hand-held microphones are new and unused in their boxes. Winner will need to obtain his own mounting brackets which I've been told is nothing to be concerned about.

A lot like this can cost a lot of time and money to locate piece by piece, and have installed bit by bit. Here it is all at once at a fraction of after-market costs. Winner is responsible for shipping (we will attempt to locate the least expensive possible, and are open to requests.) Winner pays with Money Order, Bank Check or Personal Check, allowing reasonable time for check to clear. While we do not understand the technological inner workings of these items, we are open to, and will try to answer, your basic questions. Thank you."

So "Bill" I guess there is some magic switchboard in the sky that
determines if your licencse is valid or not? I don't think so, but maybe
your correct(Highly doubt it)Since I can transmit to the same model at
the same freq. this kind of rules out your hypotheisis doesn't it? I a
no EE major nor I am experienced in ham radio operation, but simple
deductive reasoning would kind of suggest some sort of filter mech. the
police radios have which I lack. All I asked for was a simple
explaination, not a snooty,"this is a ham-experienced only discussion
group and you are obviously a novice, so I will not even grant you the
common courtesy of a rational response" kind of bullshit answer. If you
don't have anything constuctive to say then shut the fuck up.

Have a nice day

Grant

that is onerous.

there is the scanner price.
there is the postage fee
there is the box cost
there is the packer cost
there is the lift it cost
there is the "dog peed on box" cost
there is bookkeeping cost.
there is getting it out of bldg cost.
there is packing matter cost.
there is mailing label or crayola print cost
there is tape on box around it cost
there is putting the statement and a catalogue
in the box cost
there is weighing the box cost
there is wiping snots off the box cost
there is depreciation costs on machinery

and what other costs they never really
spell out. question mark.

A number of years ago, some woman of rare ignorance level, somehow managed
to coax a poodle into her microwave oven, ostensibly to dry after a bath.
The poodle exploded, at least that what the news stories said about the
incident.
That has to be the most stupid act of ignorance ever conceived-- either
that, or the woman was mentally ill.

Thanks for all the replies, both through the list and direct!

It appears that the UHF whips on all of the Turnpike Pocono Barracks patrol cars are indeed for use with mobile extenders linked to either Turnpike F1 or F2 (159.075 & 159.045). It also looks like the extenders are licensed by the Turnpike Commission at each Barracks' location on 458.5625 under callsign WNYR682. Mystery solved!

5567. Re: why can I hear the police but not transmit

Newsgroup: rec.radio.scanner
Date: 1999-06-24 00:00:00 UTC
From: tandkmoran@aol.com
Message-ID: <19990624090425.11259.00004224@ng-cd1.aol.com>
Source record: 114691

1. Most frequencies, including amateur and police / public safety require a license to transmit on.
2. Most systems, including police repeaters, require permission or authorization to use or access
3. Modified amateur radios aren't type accepted for use on commercial or public safety frequencies. In fact, once they have been modified they arent even type accepted for amateur radio use anymore.
4. Commercial and Public Safety frequency allocations employ equipment whose type acceptance includes much more stringent standards (frequency calibration, stability, deviation, etc) than those for the amateur radio service. The primary reason for this are interference concerns. Interference on public safety frequencies is likely to have far more serious consequences than interference on amateur radio frequencies, generally speaking.
5. I can just about guarantee you that a modified amateur radio transceiver which is used to transmit out of band is sending out RF at other frequencies in addition to what is displayed / tuned in on the rig at the time. This can cause some very nasty interference situations.

>All I asked for was a simple
>explaination...

-Understand that the concept of making unauthorized transmissions on Police frequencies is a real "hot button" topic, so dont be so suprised by the flames which have ensued. To say the least - it's not a good idea. There has even been a case of a licensed ham getting into hot water for making an apparently justified radio transmission on a public safety frequency (to request ems for an accident victim). In theory, your amateur radio license permits you to make emergency transmissions out of band in life or death / serious injury / major property loss situations. In practice the authorities consider this permissible only when there was no other way to get help in a timely manner, and sometimes, not even then.

Happy Scanning - Ted

Well here we go again, I mention when asked in a newgroup where to find a crack file and this software companys threaten me with legal proceedings AGAIN !. This may or may not be real as it was via Hotmail...the usual cowards route for threats !.

------COPY----------

<acrbb@hotmail.com>
Just to advise you that people at airnavsystems.com will prosecute you for giving AirNav cracks info to newsgroups. Pay attention to that as they already have detailed info on you. I am trying to convince them not to do that...

-----COPY---------------

Well here is my response to them AGAIN !.

When the consumer has the protection (full) under the sales of goods and services act for s*itty software or software that crashes your system and is full of bugs then I will not support cracking any more. As it stands we havve bugger all rights if you (the author) sell us software which is NOT fit for it's purpose ie. does not do exactly what it claims, crashes or locks up your system etc.

I have heard all the excuses about other software /drivers etc are the cause but that is NOT good enough. It is time for the industry to smack their heads together and agree upon more standard format for making software so you do not get these problems with drivers hardware and the like.

Why should the consumer keep putting up with rubbish !.

I am not a cracker/patcher/hacker/coder or anything, if somebody asks me in a newsgroup if I have seen a file on the net I will tell them, this is NOT illegal in any shape or form so if they want to take me to court please let them as they will look very silly !

if a person come up to me in the street and asked me where the nearest bank is and then went and robbed it would I have been breaking the law ?...NO ! same thing.

trying to CENSOR me as before just makes me more determined.

i have an optoelectronics 1300H/A counter.
how can i increase sensitivity on this so i can pick
freq. further away?
right now i need to be within' 10 feet of a transmitter
at 1 watt output, closer on smaller x-mitters.
i think the scout? and r10 can catch freq. much further.

anyone?

thanks
billh

>AGAIN !. This may or may not be real as it was via Hotmail...the usual
>cowards route for threats !.

I am a software developer myself, so I share a rather unique perspective on it. As far as I am aware, you have done nothing wrong. The person or person(s) who made the crack available are the ones bearing legal responsibility for their action, NOT you. Had you posted the crack itself or put it up on your site, then you would be liable, but not by just telling someone where to get it.

Even then, there's very little that can be done, this kind of thing is difficult to fight. Sure, they can sue the crap out of the author of the crack, but that still can't make up for the possible lost revenue. So what's a developer to do?

The answer is simple - don't make software that can be "registered" on-line by entering some obscure code! If someone wants to buy it, you give them a registered copy in the mail. Easy. No more cracks. (just warez... ;-))

What kind of "free" shipping is this? Buy your radio and then get it 2 weeks later? Or priority air overnight? Or something in between?

What if I've found a place that has the radio for $210 and $10 UPS 3-day ground shipping?

Is yours a better deal because it is "FREE" shipping.

I should also think it a good idea to check into the actual pricing involved in shipping a handheld radio 2 or 3 day UPS/FedEx...as well as paying for the insurance to replace the item should it get lost or damaged in transit. Having done this, I don't think you'd be so quick to label a paltry $10 or $12 as outrageous or inflated. It seems to be right in line for the many handheld radios I've shipped in my time.

Hello "Grant",

Thanks for your reply to my response to your post. It has given me another 'shot' at you . . .

First, given your initial question, I am not surprised at your inability to express yourself in a civil manner. It seems that ignorance, frustration and incivility go well together. Given the time that elapsed between my post and your reply, you should have been able to do better . . .

As far as "snooty" goes, that's your impression. Is it because you didn't like my reply? Guess, what? I didn't like your question! Why? There are two reasons:

1. You are obviously a novice and you have no business with one, let alone two, ham (or other) transceivers that require a LICENSE to use.

2. Even if you did have the transceivers "legitimately", the fact that you know you cannot "transmit" to the police means that you have tried to do so and failed . . .

Given this, it is my opinion that you have absolutely no business with the knowledge of how to do so or why you were unable to do so.This is especially true since, there are only three very simple reasons that you would have failed. Since you were unable to discover the reason(s) on your own, my opinion would seem to be well supported.

And, just how "constructive" would it be if you were able to "transmit" to the police??

And, as far as a "rational response" goes . . . Yours wasn't.

Nice day? Yes, it is always a nice day when I have such an opportunity . . .

Yo' Buddy,

"Bill"

Didn't ask, but am highly interested.
Thanks for your extensive detailed information.

The point which is overlooked mostly when talking about
sniffing GSM is,
that a receiving-only station does not have to be authenticied.
Just set it up to follow the frequency hops of a particular
bearer.
The crypt key is sent once during connection initialization,
you can then record the data or decypher on the fly?

What else is needed? Do I miss something?
remember: not participating in the conversation,
only receiving it, what are the requirements?
How is the frequency hopping communicated between
base station and mobile?
A handheld phone needs to be re-programmed,
certain devices use the 80C166 processor,
for example, running at about 25 Mhz.
Difficulties arise when the ONE-CHIP devices
will be the only available on the market,
and the I and Q signals are no longer accessible....
Just my 5 cents,
hi,
hc.

Not off hand - they change them constantly.

Does your scanner have search functionality? If so, look in the 162-173
range - that's where they reside here in Phoenix.

If you have mil-air, they have freq's there also. You just have to find 'em.

5600. My Idea of a Good Scanner

Newsgroup: rec.radio.scanner
Date: 1999-06-24 00:00:00 UTC
From: Bill <k9kz@indy.net>
Message-ID: <7kud84$jp8$1@nnrp1.deja.com>
Source record: 114724

I have been researching the many different scanners that are on the market lately. I really like the BC895xlt and the BC9000xlt base scanners. I think it would be a fine scanner indeed it Uniden would combine the best features of the 895xlt and the 9000xlt into one new scanner. And throw in the trunk tracking capabilities of the new 245xlt. Price it around $200 and it would be a real winner.

Being a ham I would also like to see an HT with wide band rx, and reasonable power output (more than the Q7A). What I'd really like to see is Rich Wells designing a couple of scanners, handheld and base. That would be interesting to me. I sometimes wonder if the manufacturers consult hobbyists at all. They seem to be a little slow at adding features and a little quick at leaving out the really needed features. For instance the search lockouts on the BC895xlt (20). Hopefully on the BC895xlt replacement Uniden will have at least 50 lockouts.

So what's my point? Every time I get interested in a new scanner model, the closer I look the less perfect it looks. I have been so dissapointed that I've seriously considered the higher priced handhelds, the MVT-9000 and the AR8200. But it seems even they have some serious flaws. I don't mind paying the price if I REALLY enjoy the radio. Just thinking out loud and still searching.

Bill K9KZ

> -Phil
>
Hi Phil , I am surprised and pleased with your occupation at your rational
and pleasant response it is a refreshing change and helps to open sensible
debate on the matter.

One thing I would make clear before I am mis-interpreted is that first, I do
understand the problems that authors and manafactures have in making
software that will not clash with others installed on a system, and also
that I do not wish any ill-will upon the same people. I see your point about
online reg programmes but as you say warez would then become the norm so
removing online reg and shareware would not serve much use to authors.

I also have it that making a crack file is NOT illegal nor is distributing
it, it is only using it in conjunction with the programme that is the
illegal act (as far as i know).

But let us address the Main issue here, When a consumer purchases a software
item he/she has no guarantees that the software will not crash his machine,
destroy other software or damage the machine in other ways and for that
matter work in the way in which it was intended, this in itself to me anyway
is a crime to the consumer.

What is seriously needed is some platform/hardware//programming languages that are industry standard and can better work in harmoy with each other thus allowing the authors to have a better idea of their programmes interaction with other hardware/software on a system
If this was to be the case and then the consumer may get some kind of guarantees or warranty then fine !, buy it !. but until this happens cracking etc will never even slow down let alone be stopped, I have spoken electronically with many crackers in my time and the majority have this same opinion and many even tell me that this is the exact reason why they do it (some of course just dont want to pay).

If something like the above could happen then more would buy and authors could make better products with the extra revenue.

just my opinion of course :-)

regards

eavsdropper

National-Electronics has a lower price. Not by much but I'd rather
save it than pay it. They are selling the BC245XLT for $218.95,
which includes shipping. Follow this link for more info:

http://www.national-electronics.com/unbc.htm

I have never ordered from this company before now. I read
in this NG a week ago about their low price. I ordered two
yesterday. ;-)

5604. Pro 2026 Discriminator Question....

Newsgroup: rec.radio.scanner
Date: 1999-06-24 00:00:00 UTC
From: Phil Smalley <ziggy7445@scanner.yahoo.com>
Message-ID: <7ku9pvgak1@phxtst22.phx1.aro.allied.com>
Source record: 114728

Not that I am a newbie to scanning, but maybe someone out there has done this:

I have found a tap point on the PRO-2026 (unfortunately, it's at home and I'm at work so I can't recall where exactly the point was) and hooked up a RCA cable to it, grounding it at the solder point for the -12V ground off of the power cord. I didn't use a capacitor or anything, just hooked it straight in.

Now comes the question. When the rca cable isn't connected the scanner works just fine, at least for an old 2026 ;-). But, when the tap is connected, the volume gets REAL quiet. At least half of what it was before the connection. What's more, the decoding success rate on this thing is less than 20% - trunker won't even decode anything on it. My 895 on the other hand does superbly, achieving 98% or better on trunker, with the same kind of direct, no-cap connection.

So I'm just curious if anyone else out there has any suggestions on getting this little guy up to par... I hate having my 895 sit around on some dopey data channel all night, when I have another less sophisticated scanner doing nothing.

Thanks,

5609. Wanted: Broken motorola cordless phone part...

Newsgroup: rec.radio.scanner
Date: 1999-06-24 00:00:00 UTC
From: MacUser@Penn.com
Message-ID: <MacUser-ya023580002406992033310001@news.penn.com>
Source record: 114733
Cross-posted to: alt.cellular,alt.cellular.motorola,alt.cellular-phone-tech,rec.radio.cb,alt.radio.scanner,rec.radio.scanner

Not sure where to find this, so I'm hoping you folks who read these groups might be a good source for either the part itself or leads that will get me there. (I've tried Motorola, and they were very helpful, but don't have the part I need. They discontinued these phones several months ago.)

I need a "pivotal desk stand" that will fit a Motorola model 5525 cordless phone. Motorola made several cordless models, but I think they all pretty much fell into two sizes, a narrow unit and a wide-body. The 5525 is the wider of the two (or more if there are more). It has a numeric keypad and a speakerphone option on the base.

The pivotal desk stand attaches to the back of the phone and pivots one way or the other to either allow you to mount the phone on the wall or to set it on a desktop. Without one, the phone won't mount securely on the wall and flops back and forth on the desk. Not good. ;-)

The part I'm looking for would be about five and half inches wide where it connects to the back of the phone. Dark gray or black would be ideal, as that would match the phone, and those were the most common colors anyway.

I'm thinking it is logical that the handset part of the phone is the most vulnerable to damage and that somebody out there has one of these that is broken, but has a good desk stand on the back of the base.

I'm interested in the whole phone, just the base, or just the desk stand part, whatever is most convenient.

If you've got one, drop me a note!

> fine antenna. Cappy Anderson

Rubber ducks are built that way mainly for convenience. After all, a 'duck is simply a coil with a rubber cover. Look at your standard table-top or portable (non-hand-held) scanners... Most come with a standard telescopic antenna.

The first secret to really pulling in the signals on a hand-held is ditching the 'duck and using something else. Most scanners are supplied with 'ducks because telescopic antennas can be a bit unwieldy, especially in close confines like inside an automobile...

Once upon a time, you had the choice of a telescopic or rubber duck antenna when you bought your Motorola HT. (e.g. HT-220, MT-500) radio manufacturers stopped offering the telescopic antennas years ago because most folks preferred the convenience of a 'duck. Unfortunately, most people don't realize you take a serious performance hit, especially with "stubby ducks".

It is important to know the shipping cost because companies like CEI
(http://www.usascan.com/) charge $19 to ship the same scanner. So
they may initially seem cheaper than someone else but if you don't pay
attention, they slip the shipping charge in when you place your order.
Now, do you think $19 is reasonable to ship a handheld scanner?
That's $10 more than the company I mentioned. Any extra money
that isn't important to you, please send it my way!

OBTW, it hasn't been released yet so no one has it in stock, including
Uniden... and stop shouting. ;-)

Thanks. It's more of a concept site, as I didn't target the content toward
the general public originally. When this material was scribbled on paper, it
was for my personal notes, as I worked on breadboarding conceptuals. The
site could be MUCH better, if I chose to devote a lot of time to retargeting
the content, but for now, I went with the notion that some information was
better than no information. Bear in mind that all that content was created
between 1979-82. Solid state electronics was pretty new to me then, as up to
that time I had worked exclusively with vacuum tube designs. Maybe that was
good, as it caused me to keep my designs simple.

Actually, that is one of those stories that never happened. Like the one about the woman who came home and her dog was choking on something that turned out to be some fingers and called the police who found a scared burglar hiding in a closet in her home. I can't remember any of the others at the moment but perhaps someone else here does. I think there is a book that has all these. If you think about it, you really can't fit a poodle or cat (the story sometimes uses a cat instead of a poodle) in a microwave without really hurting it or breaking it's legs.

Oh I remember a few of the other ones, George Washington and the Cherry Tree, and the girl who was told by her mother that her little brother had what she didn't because sometimes the doctor forgets to cut it off when you are born at the hospital, and later the mother hears screaming and runs upstairs to find that the girl cut her brothers penis off with a scissors.

Actually, many cats would easily fit in a large microwave. My cat
would certainly fit in mine. Since he is dry, I won't try at the moment. ;)

Grant,

It is not a "filter", or "CTCSS" that keeps you from transmitting on the Police frequencies. Most radios are run by a microprocessor nowdays. The firmware is programed only for transmit on certain frequencies. They also do not have the necessary values of electronic componants to allow transmission in the police frequencies. Even if you changed the electronics, the firmware program would not allow transmission.

It is also not a good idea to swear at people who are offering a reply to your question.

>N9NUQ

I would save the extra pennies, and get the BC245. This is a trunking
scanner. More and more areas are going to trunking systems. If you buy a
non-trunking scanner, you probably would be sorry in the future.
The reason for the concern about price is that this is a new model, not
out yet. Everyone wants to know what we will have to pay for this one. It
apparently should be available for purchase in the next couple of weeks,
or so.

5619. BUZZARD PEAK 145.460 MHz

Newsgroup: rec.radio.scanner
Date: 1999-06-25 00:00:00 UTC
From: PDWK66A@prodigy.com
Message-ID: <7kur47mlg1@newssvr01-int.news.prodigy.com>
Source record: 114552

RE: BUZZARD PEAK 145.460 MHz

I used to monitor the BUZZARD PEAK 2m repeater on 145.460 MHz since whenever there was an earthquake in Southern California, hams from all over would get on that repeater and report what they felt, and within a few minutes, you would have a pretty good idea of the epicenter and reports on any damage.

This repeater is listed in the 1997 Southern California ScanFan (6th Ed.), but is NOT listed in the 1998 Repeater Location Guide.

I tried to raise the repeater this weekend, but had no success.

On Wednesday, June 23, 1999 around 9:30 pm local, I heard a computerized voice announce essentially the following:

"K6PYP and KC6OKA - Southern California Dept. of Veterans' Affairs Emergency SHARES Repeater."

I tried again to raise anyone on this frequency, but again no success.

Does anyone on here know what happened to the BUZZARD PEAK repeater and what this Dept. of VA Emergency SHARES Repeater is?

Thanks and 73 de JOHN, KC6NWJ

Go to the RadioShack web site and download the manual for the Pro-90
scanner. It's identical to the 235XLT.
Basically, think of scan lists in the same way you think of banks in a
conventional scanner. Instead of storing frequencies in a bank, you store
talkgroup IDs in a scan list. That way you only have to listen to those you
want.

I am not a techie, but I think that scanners which rely on
synthesizing frequencies have what are popularly called "birdies" --
noise as you describe. Even triple conversion units will have this.
The manual with one scanner I owned even listed these frequencies.

On the other hand, I sometimes get noise like this on a frequency
which is otherwise fine. Strange thing--when I used a mobile antenna
it would not appear, but with the ducky it did. (This was on 160.650.)
I was not able to get it to do this all the time.

Hello Ricky,

Sometimes, power lines generate noise.

Other possibilities are:

* Spurious signals from transmitters on other frequencies.

* Atmospheric noise.

* Appliances, fluorescent lights, computers, scanners (yes, scanners!!) or other devices nearby.

* It might even be a cordless phone with some type of encryption.

You can get an idea if it is due to birdies, as others have suggested, by trying a different scanner in the same location on the same frequencies at the same time. If both do it on the same frequency (and both aren't BC-160s), then that signal most likely isn't a birdie. If the other scanner doesn't stop on the noise, chances are the noise is being generated within your BC-160. (Of course, it could also be that the other scanner is too "deaf" to receive whatever these signals are!!!!)

One other thing you might try is to see if it does it with no antenna. If it doesn't, chances are the noise isn't being generated from within your scanner.

In any case, good luck with it. I have an old BC-160 that I use almost everyday and it still works well. I use mine on UHF and on programmed frequencies, so I haven't really had the opportunity to run across this problem.

Regards,

Bill

: -Phil

: -=Anti Spam Measure In Effect=-
: -=Remove the word "scanner" to reply=-

Either put a capacitor or a resistor in line with the discriminator
output-you are loading the discriminator output too heavily-which is why
things get "quiet" when you try to use it.

As a professional software developer, I can assure you (and Phil and
others can back me up on this) what you want is almost impossible. The
complexity of today's personal computer systems is already immense,
and each day it becomes even *more* so (Microsoft alone seems to come
out with a new "technology" and a corresponding API on a monthly
basis). Each day new and more complex hardware hits the market, more
and more software developers of all skill levels release their
programs to an ever-expanding market of end users - it's physically
impossible to test each and every possible combination to screen out
harmful interactions. The best you can ever hope for is that the
software company will refund your money if the program won't work
properly on your system. How you deal with this reality is, of course,
up to you. ;-)

As for cracks and piracy, until the day that all software is given
away for free, there will always be crackers and pirates.

Shiva I agree with everything you have said above , but at the end of the
day it should NOT be the consumers problem, if all the smart ass peeops who
make all this thought first instead of rushing about trying to out-do each
other it would not be in this mess with all this conflicting of
soft/hardware, but as you say it is all so bogged down now it would take a
lifetime to stabilise it all.

> As for cracks and piracy, until the day that all software is given
> away for free, there will always be crackers and pirates.

You are probably right there, I would never begrudge a person for trying to
make a livig out of computers but this problem of legal rights with
software/hardware will HAVE to be addressed sooner or later and god help
them when it is because it will probably kill of the little guy !

I do not have the answers unfortunately, but until the answeres pop
up......on it goes i suppose

best of luck to ya !!

The Icom PCR1000 does a good job from 100KHz to 1300MHz on
AM/FM/USB/LSB/NFM/WFM. If you scan discrete frequencies (as opposed to
scaning from say 2MHz to 3MHz)[like maritime or aero channels]most
stations are close enough to same frequency that it works very well.
Sometimes people will sound a little "weird" because they are not
"netted" to the proper frequency. But if you are scanning a range (ie 2
to 3MHz)like the HF ham bands, then it just won't work very well because
there is no "AFC" in the LSB/USB modes. With the PCR1000 there is a
"voice squelch mode" that almost will stop the scan on frequency.
It will sometimes stop the scan at apoint where you can understand the
"voice", but never to where it is comfortable to listen to.
The PCR100 may have all these features as a somewhhat lower cost.
Some of the 2mtr ops around here operate on the "same" frequency day
after day, and I have those freqs plugged in to the "ham" bank.
I hope this makes sense.

>
>Bill WD4HSE
>
Er...I hate to disagree, but that is not always the case.
I have a homebrew LED clock from the early 70s'. It used a 3.58 color
burst crystal as the refference. the 41 harmonic fall on 146.76.
And it is stong enough to break the squelch on most of my VHF radios
(IC-28A,IC-2AT,IC-u2AT,S1,Pro2004,Pro34) with the antenna disconected.
Now by moving any of these radios 10' away the "signal" goes away.
I can hear this little beast at least 1000 away. And the oscillator is
a comercial "Part 15 type accepted" device. The harmonics from 100MHZ
to 400MHZ are much stronger than the fundamental.
My PCR1000 does not "hear" it with the antenna disconnected.
I had the clock before I got my first VHF gear and had never even heard
the 3.579545MHz signal while SWLing. It took about a week to figure out
why the local 146.76 repeater had a weak carrier there all the time, and
a soft little audio whistle in the background during quite spots.
I have seen modems nearly as bad, they can be recieved all over the
VHF/UHF even with the antenna disconected.
One day when the AC mains went down, and the "signal" went away, I
realized that was something in my area. Only took a few minutes atfer
the AC came back up. I first killed my house mains and when it went
away, started checking breaker by breaker. When the power to my radio
room went down so did the signal. My radio was on a backup supply, but
I had not gotten around to putting the clock on a backup battery.
Good hunting!

Naw. If they wanted to monitor phones they can just as easily go the
central office and insert the appropriate monitors there.

Of course, espionage is another game altogether. Using weak
encryption on export telecommunications products is standard policy of
the USA.

Hmmm. Like any other engineering design, a scanner is nothing more
than a compromise between receiver performance, power consumption,
size, cost, complexity, and so on.

Where you draw those lines is a matter of marketing. If you want a
unit with no compromises, expect complexity, expense, and not a whole
lot of portability.

I think the best ideas I've seen yet are the PC based scanners. A
substantial fraction of the price of any radio is the case, knobs,
speaker, buttons, processor, and so on. I look forward to seeing
scanners drop in price and/or improve performance while keeping prices
reasonable.

Of course, the portable scanners will never go away. If you want to
monitor NASCAR or even the traffic at a local airport you'll need to
be portable.

Hi all,

I'm creating a traffic reports web site in Hampton Roads, Virginia (SE shore). I'm looking to buy scanners to monitor police, fire and rescue info, but I have no idea where to begin.

I went to http://www.strongsignals.net/htm/pickrecv.htm from a previous post on this list. And that's helped me a lot.

But I'm still wondering about scrambled signals and whether or not the police around here DO scramble their signals. If they do, is there technology available to unscramble that stuff for public consumption?

Also, is there a web site available with a glossary that translates police/cb speak?

Thanks for any help y'all can give!

Best,
- Jon

>
> "K6PYP and KC6OKA - Southern California Dept. of Veterans' Affairs
> Emergency SHARES Repeater."
>
> Does anyone on here know what happened to the BUZZARD PEAK repeater and
> what this Dept. of VA Emergency SHARES Repeater is?

Taking a guess: It's simply a 'private' ham radio repeater (maybe at a VA-controlled antenna site) set up for use by hams during disasters. Since it might be for use by the Radio Amateur Civil Emergency Service (RACES, which is administered by FEMA, which is a National Communications System participating agency, which is a member of the SHAred RESources program...), or it is to be used by amateur radio operators assigned to Disaster Medical Assistance Teams, part of the National Medical Disaster System, of which the Veteran's Administration is one of the lead agencies, and the VA is also a member of SHARES...

So if either of the two guesses are correct, they're kinda taking quite a bit of 'artistic license' to call it a VA emergency SHARES repeater. However, if you just caught a 'special' DVR track normally reserved for use during emergencies, it makes sense because it'd probably scare some of the idiots ("Uh, is there a net in progress?") away from using the repeater.

I agree on all counts and I'd be willing to bet that there is such a beast being considered as we speak... But I doubt you'd see it for around $200 right off - the 895 I currently use cost me $340 brand new, purchased one month after the radio hit store shelves. (I might add that I still consider it the best $340 I ever spent, even though the same radio costs $200 or less today)

>What I'd really like to
>see is Rich Wells designing a couple of scanners, handheld and base.
>That would be interesting to me. I sometimes wonder if the
>manufacturers consult hobbyists at all.

Some are starting to realize the benefit of consulting with hobbyists. The 895xlt is just such a radio - designed based upon input from some of the scanner industry's top hobbyists and professionals. But, as another poster mentioned, there is always a compromise between features and price. They have to try and appeal to the largest segment of the scanner market. That means keeping the designs simple and prices low for novice users, and then adding in features to attract the advanced and professional users. It's a very delicate balance, and I think the 895 pulled it off rather well.

>So what's my point? Every time I get interested in a new scanner model,
>the closer I look the less perfect it looks. I have been so
>dissapointed that I've seriously considered the higher priced
>handhelds, the MVT-9000 and the AR8200. But it seems even they have

>radio. Just thinking out loud and still searching.

The best thing to do is check the reviews that Rich Wells and others do on these new radios, check around for user input, and see what comes up on the horizon. Maybe even purchase a radio, try it out, then send it back, until you find "the one". I've owned at least a dozen scanners over the years and the 895 is, in my opinion, the best radio you can get for less than $300 today. When the 245 comes out, it may take over that spot for me, but we'll just have to wait and see. But, that's half the fun, isn't it? ;-)

Good luck. When you find that perfect scanner, let us know.

5663. Icom Q7 shortwave/HF problems

Newsgroup: rec.radio.scanner
Date: 1999-06-25 00:00:00 UTC
From: Curt Phillips W4CP <cphillips@engineer.com>
Message-ID: <7l0sc5$g4k$1@nnrp1.deja.com>
Source record: 114596
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,rec.radio.amateur.equipment

OK, I've "opened up" my Icom Q7A to the shortwave frequencies using Goran Vlaski's excellent software (http://www2.crosswinds.net/frankfurt/~vlaski) to program in some shortwave frequencies into Q7 memory locations. However, the results haven't been as good as I would have hoped. First, I was under the impression that the receiver was essentially the same as that in the R-2 (even an ICOM rep at HAMCOM said so), but it seems pretty deaf. The stations that normally boom in here in Houston (HCJB, RadioHavana, WWCR) can barely be heard. I'm running a 19" aftermarket SMA antenna for it (what, a shortwave antenna needs to be longer? :-) I don't mind rigging a longer antenna, but I was wondering if this was the same with the R-2?

Also, even though I can program shortwave frequencies into the memories using the computer, when I try to do the memory-to-VFO swap, the Q7 "bombs" back into one of its regular frequency ranges (usually aircraft, probably because that's AM also). Therefore, I can't readily "tune around" the shortwave bands, trying to find stations that are strong enough to blast through my monster antenna. :-)

Here I am, paid over $150 for this radio, and it won't really do DC-to-daylight. What a disappointment! :-)

Anyway, I do really like the radio, but I'd like it better if I could solve these little problems.

Any input would be appreciated. After all, all I'm looking for as an AR8000 with 2 meter/440 MHz transmit capability in a case the size of a pack of cigarettes for less that $180. (Trunk tracking would be nice, but we won't go there right now. :-)

Well, to make it short and sweet. I would make a unit that had a custom color active LCD screen (like the new Windows CE handheld computer units) and build in hardware logic that would accommodate trunking all systems as well as an accurate log scale signal strength meter. Complete and accurate (not the AOR type crashware) software control with on board 2000 channel memory, 20 space alpha tagging, accurate and fast bandscope, 1.9mv sensitivity across the band with a variable rate attenuator from 30-2000mhz. A heavily multi-shielded internal structure with a magnesium alloy external case. All switches would have action and feel of a precision Swiss watch. Super high quality multi bandpass filtration at each band juncture according to the U.S. Bandplan. A "no brainer" approach to programming that was "logical". All this in a large handheld unit that would use a rechargeable lithium battery with an average life of 6 to 8 continuous hours between charges at half volume. Believe it or not, this is no pipe dream. All it would take is a top flight company (like Yupiteru or Icom) to develop and market it. I would like to see it for under $2000.00. I don't find that unrealistic if a company would eat the development costs. Yeah, right huh?

Uniden Bearcat 9000XLT - Keyboard tricks
(By Jeff Goldman, WA1UDB, with additional credits to Dave Rodriguez, Jeff Zeman and Bob Parnass)

By holding down the 2, 9 & DLY keys as you turn the 9000XLT on, you enter a sort of test
mode. To do a "keycheck test" you can hit any key or turn the VFO knob either direction and the
alpha display will tell you what key you're touching or which direction you're turning the VFO
knob.
At this point, if you momentarily hit LOCK (to the right of the VFO knob) and one other button
various things will happen:
LOCK & C - REPLACES ALL MEMORIES w/1300MHz and alpha-tags channels 1-
250 with CH 00-249 in the display. Again, this will wipe out your memories!
LOCK & D - Checksum and Firmware Version Number.
LOCK & E - LCD Display Test.
LOCK & PROGRAM - Runs a short, continously-repeating demonstration program incorporated specifically for showing at the January, 1995, Consumer Electronics Show in Las
Vegas. It also sounds attention tones as the message scrolls on the display! (Note that the word
"scanner" is spelled "Scaner" in the demo program; it was too late to change this booboo that
originated in Japan.)
The last three tricks will not wipe out memory. Only LOCK/C will do that.

>The only redeeming quality is the small size.

Yes, the intermod is bad in areas such as mine with lots of radio
traffic. I have found, however, that this radio is particularly good
for listening to aircraft frequencies. Also, even with just the rubber
antenna mounted on it, I get WWV time without difficulty.

A handheld with an active, color LCD that runs for 6-8 hours? I think that lithium cell would be rather large, no? Probably talking about a radio about the size of the current generation Sonys, at least?

> I would like to see it for under $2000.00.

Yikes! I don't think you'll sell too many of those! Therein lies the problem. Too many hobbyists can't justify that kind of expense for a single radio. Many seem to want the $200-$300 radios and I think the manufacturers are twiddling with the magical $600 price range and walking the thin line. No matter how good of a radio it was, I think you'd have a hard time convincing people to pony up $2000 for it. Even if you could convince them it's worth it, would they still be tempted to buy it? Or would they rather buy a $500 AR8200/MVT-9000 with a $11000 AR3000 and still have some change?

I think we can all agree what a nice radio would consist of, and therefore the kind of costs it would necessitate. But I don't think any manufacturer would dare try to make it fly for fear of the consequences; few radio sales => Chapter 11.

Anybody know if Bill Gates is into scanning? ;-)

I have come to realize that there is no perfect scanner. I have an
ICOM R8500 that I love. But one major flaw is that fact that you
can only scan one back or all banks. Not a mix of banks. What
were they thinking?! Although computer control gets around this
I don't want to have my computer on all the time.

Give me an R8500 where you can pick and choose banks and supports
Motorola and EDACS trunking. That would be the scanner to have!

A Summary of Current Federal Gun Laws

The Associated Press, June 19, 1999

http://www.nytimes.com/aponline/w/AP-Gun-Laws.html

Summary of current federal gun laws:

--Use of a firearm in a violent or drug-trafficking crime is punishable by a mandatory prison sentence of up to 20 years. A second conviction, if the firearm is a machine gun or is equipped with a silencer, brings life imprisonment.

--People over 21 may acquire handguns from licensed dealers; those over 18 may buy rifles and shotguns.

--Firearms and ammunition cannot be owned by: people convicted of crimes punishable by more than one year in prison (except state misdemeanors punishable by two years or less); fugitives; drug users; the mentally incompetent; illegal aliens; citizens who have renounced their citizenship; the dishonorably discharged; persons under restraining orders; and those convicted of domestic violence.

--Sale of a firearm by a federally licensed dealer must be documented by a federal form that identifies the buyer and records the make, model, and serial number. Dealers must notify the federal Bureau of Alcohol, Tobacco and Firearms when they sell multiple handguns to individuals within a five-day period.

--Prohibited firearms include semiautomatic rifles equipped with detachable magazines and certain other features. Similar

guidelines are imposed on handguns and shotguns.

Message-ID: <377439c6.0@newsman.viper.net>
Source record: 114623

Thanks to all for the replies! I was reading my post, and think that I may have been misleading...It isn't one or two frequencies that the scanner stops on, it is more frequencies than not in this range! I did try it with the antenna unplugged, and that stopped it, so I am suspecting outside interference from my computers as being the culprit in this problem. Also, my scanner is located about 3 feet from where the power meter is on the outside of the house. It may be a bad combination that is the problem, but this frequency range seems to be the only affected one. Strange, but I will play with it and see.

Also, Bill, I don't have the product manual for this scanner. Would it be possible for you to give me the frequency ranges of this scanner?

Again, thanks to all for your help!!

Ricky.

Bill <aci6@aol.com.net.htm> wrote in message
news:19990625020644.03950.00005092@ng-ce1.aol.com...
| Hello Ricky,
|
| Sometimes, power lines generate noise.
|
| Other possibilities are:
|
| * Spurious signals from transmitters on other frequencies.
|
| * Atmospheric noise.
|
| * Appliances, fluorescent lights, computers, scanners (yes, scanners!!) or
| other devices nearby.
|
| * It might even be a cordless phone with some type of encryption.
|
| You can get an idea if it is due to birdies, as others have suggested, by
| trying a different scanner in the same location on the same frequencies at
the
| same time. If both do it on the same frequency (and both aren't BC-160s),
then
| that signal most likely isn't a birdie. If the other scanner doesn't stop
on
| the noise, chances are the noise is being generated within your BC-160.
(Of
| course, it could also be that the other scanner is too "deaf" to receive
| whatever these signals are!!!!)

|
| One other thing you might try is to see if it does it with no antenna. If
it
| doesn't, chances are the noise isn't being generated from within your
scanner.
|
| In any case, good luck with it. I have an old BC-160 that I use almost
everyday
| and it still works well. I use mine on UHF and on programmed frequencies,
so I
| haven't really had the opportunity to run across this problem.
|
| Regards,
|
| Bill

The 5-mile radios are really GMRS Radios that * Require a License *
to operate. Why modify a FRS radio when a stock GMRS radio
already has the increase in power. Many GMRS Radios are advertised
as FRS radios because they include the FRS frequencies in addition
to the GMRS frequencies.

Kenwood Freetak XL has 2 watts and 15 channels.

http://www.swscommunications.com/freexl.htm

Motorola Talkabout Distance DPS Features:

10 Channels
2 Watts of Power

I wouldn't think so. As far as I know pretty well all radio equipment is duty free. Just show up at the border with a receipt and they'll send you in to pay GST on it (sorry, can't get around that). I've bought a few scanners at hamfests in the U.S. and have never had a problem bringing them back across the border. I doubt it would be any different for a transceiver.

If you really want to know for absolutely sure, get out your telephone directory, go to the government pages, and look up the number for Canada Customs Border Services in your local area. You may have to sit on hold for while, but at least you'll get the info straight from the horse's mouth.

Hope this helps.

Good luck,

Paul

Ya and that's misleading to the customer. That makes them think they're buying an FRS radio when its really not. Then they end up using the GMRS freqs. too thinking that they don't need a license.

> Motorola Talkabout Distance DPS Features:

<snip>
This radio IS NOT an FRS radio.

i'm not to technologically minded about computers (or scanners for that manner), so this may be the stupidest question you've ever heard. the other day i noticed that the ethernet adapter card that came with my laptop had the same type of connectors as my scanner, bnc i believe. my scanner ant. fits right onto the card. so is there any potential here, or am i way off base?

please don't flame me
thanks in advance
P.S. am i supposed use HTML messages?

Every time a new base or mobile scanner is introduced I eagerly review the specs looking for the one feature that I so desperatley desire: multiple antenna connectors. In this day and age we have terrific wideband scanners that are hamstrung by a single measly antenna connector. When I buy a scanner that covers 25-1200 Mhz I want at least 2 and preferably 3 antenna inputs. I should be able to program the desired antenna along with the frequency for each channel. Sure, there are some pretty good multi-band antennas out there, but nothing compares to having multiple antennas optimized for discrete bands. The old Shinwa SR-001 had this feature, but it never took off in the marketplace, and Uniden seems content to leave well enough alone in this area.

Just my 2 cents worth.

In this search for the "perfect scanner", wouldn't you want a built in module that allowed you to point the built in laser at people house window and demodulate the window's vibrations into conversation that could be then recorded on the built in microcassette recorder(much like the Sanegan or Sony SWR).

Additionally-it would be absolutely required that they supply a readable, inteligible users manual or hire Rich Wells to do it for them.

5716. Re: PRO 2005- BATT LIGHT AND BEEP WON'T STOP

Hello Bill,
I read ur posting "My Idea of a Good Scanner" in the newsgroup
"rec.radio.scanner".
I have been considering the purchase of a MVT-9000, i am not interested
in computer control, however i am looking for the best wide band
RECEIVER, which i feel this one is.
I am looking for performance on the HF amateur bands as well as VHF/UHF
scanning.
I would be very interested in hearing what u feel r "some serious flaws"
with this radio.

73, Bob (WX3G)
Vienna, Va.

5729. My idea of a Good Scanner

Newsgroup: rec.radio.scanner

My idea of a Good Scanner would be a scanner that had
a memory capacity of over 50,000.
Had a card (that could be updated via a downloaded
internet file) that had ALL of my local Police, Fire, etc.
frequencies on it. INCLUDING the trunktracking freqs.
Had a retractable rubber duck antenna (Like a switchblade)
NO BNC shit.
Was MUCH more user friendly.
Had a little solar panel on it that would charge the batteries
or at least help keep them from discharging so quickly.
Had a DROP IN charger.

5730. Re: What's on 29.620?

You better check again. The 10 meter Amateur radio band in
the US goes from 28.000 MHz to 29.700 MHz.

Yes, I am also a licensed amateur radio operator (for 15 years).

Source record: 114470

O For crying out loud !

I'm sick and tired of this code Vs. Nocode debate/flamewar
I fought and clawed to get my 5WPM and failed several times at the testing centers, But i never gve up and guess what... i finally got it and i am glad i did

If you take the code requirment out of amatuer radio you take the challenge out of it and the pride that goes with the knowlage that you actually did it. and the ham bands will become nothing more than a expensive version of 11 meters and if that happend we all lose.

Those of you that were in collage and were offered a membership in a house (Not sure how to spell it) got subjected to some initation rite...but after it was all over you had a certian kinship with the other members. the code is really no differnt... without it...where's the pride in acomplishing a diffult task (Not that it's that hard)

But then again... who want's to work for somthing anymore ?

If i can get the code you can too.

it's a hassle but it's worth it

Have a nice one all

E-Mail Encouraged...Flames put out with HALON(tm)

I recently acquired a Realistic (Radio Shack) Pro-2020 scanner. It has a "hum" only when something is being received. If anyone out there has this model I am interested in knowing if this is normal. I remember reading somewhere that a certain amount of noise is normal in some of the ealier models of Radio Shack programmable scanners. Thanks.

P.G.

?
GSM has a master key, only known to the provider
and to the user SIM card, isn't it?

Crypting uses a stream cipher.

I mean, following a conversation in real time is impossible,
cracking by brute force may be possible, but how long
will it take?

5742. Casual user questions

Newsgroup: rec.radio.scanner
Date: 1999-06-26 00:00:00 UTC
From: scribex <scribex@my-deja.com>
Message-ID: <7l3kgj$8rj$1@nnrp1.deja.com>
Source record: 114481

Scanner listening has piqued my interest lately after being put on hold for X-number of years. It's an interest, not a burning passion, so I can't justify going to for a world-beater radio with all the bells and whistles. I don't wish to become a master HAM radio technician or electrical engineer to set it up and operate it.

I'm after relatively comfortable, stable listening within a medium-sized city. Mainly, I'm interested in police, fire, emergency response and maybe aircraft, for occasional listening when the mood strikes or when something's going on. (And get this: I don't give a hoot about eavesdropping on other people's cell phone gab, so I won't be adding yet another noxious message to this newsgroup asking how to modify my wood-bodied Atwater-Kent, or what have you, to do that. Relieved? I thought so).

I could go with hand-held (with AC power option) or base. I hope to keep the price, used most likely, between $50 and $125, preferably closer to the $50 end.

I would appreciate your thoughts and recommendations about radios you've had experience with personally. And if you're recommending one that requires a separately purchased antenna, I would appreciate your mentioning which antenna and how much it would cost.

Thanks

scribex

Why would they bother to do so when they can tap the
landline side of any conversation at will? Much easier
than messing around with radios and crypto.

5751. Cape Hatteras Lighthouse Relocation

Newsgroup: rec.radio.scanner
Date: 1999-06-26 00:00:00 UTC
From: Ed Lynch <lynchs@erols.com>
Message-ID: <7l3mlm$o1s$1@autumn.news.rcn.net>
Source record: 114490

I'm sure most of you know but for those who don't, the Cape Hatteras Lighthouse is being moved this summer. The move is because the base / foundation has being ravaged over the years by winter and summer storms, has developed a "floating foundation"....erosion because of ocean encroachment, etc. Anyway, the move is about 2,900 LF to the southwest and is expected to last through mid-July.

Besides it being pretty neat to watch, there are of course some pretty good radio comms to be heard. I believe the prime contractor is International Chimney Movers of NY with a few sub-contractors thrown in....Expert House Movers of Va.. Beach was one.

Frequencies that I heard during the 1 hour period I was there on Saturday are:

154.5700 Contractor
154.5800 Contractor
154.1400 Contractor
164.7250 (103.5) Hatteras Island Park Rangers
163.0750 Park Rangers (?)
415.0125 (103.5) I think that this was closer to Bodie Island Lighthouse

If you're in the area, I definitely recommend giving up an hour or so to watch.

Ed Lynch
Chesapeake, VA.

I am a ham of 23 years... I came from 11 Meters... My wife has been a ham as long as I have... Knowing what I know now... I would have used this money
to buy cell phones and pay for the service for 20 years!!!

As for expensive CB... have you listened to 75 meters or 20 meters lately....
I hear the same language there that I hear on Channel 19 .. or worse.

Lets face it!! Hams are so complacent that the FCC will knock on their door and cite them before they will know that they have lost all their frequencies!!!

It is a dead hobby.... it just hasn't smelled its own carrion yet!!

I can go places and talk to people on the Internet that i use to fight to talk
to on HF... I have 200 countries confirmed on HF... Could do that in a week on internet...

Hams WILL lose their spectrum... bit by bit... because they won't clean up their
act not polince their own!!

Oh well... street corner preaching!!

Fare well ... and find a new hobby!!

Way off base.. Ethernet is a NETworking card that allows another computer with an Ethernet card to communicate to one another thru 50 ohm cable(BNC).. It's not for scanning.

I have the following for sale...I usually ship UPS-COD...you pay shipping, I pay the COD costs...you have cashier's check or money order ready for delivery person...no hassle on either end...

RS Pro-2044...this is a base scanner...covers the usual bands up to 512 mhz!!! With wall wart power supply and antenna...used very little in excellent condition...asking $45.00

RS Pro-2066...this is a mobile scanner...do not have the mounting bracket or manual, but not hard to operate...in good condition...covers the usual bands to 900mhz...it is an older version of the UNIDEN 706xlt if you want to see what one looks like...it can be modded for cell reception.

Any further questions, please e-mail me direct...

thanks...

cleve

My guess would be yes as our use of the FRS freqs. there are not that same as they are here. I believe this to be true with most if not all radio services here in the US.

5765. Scanner Trivia (please bear with me...)

Newsgroup: rec.radio.scanner
Date: 1999-06-26 00:00:00 UTC
From: Paul Judd <scout@direct.ca>
Message-ID: <8Uid3.213$qK2.47512@newsgate.direct.ca>
Source record: 114504

I became a scanner convert sometime around 1977 or '78, after seeing a television commercial for a Bearcat scanner.

The commercial featured this kinda milquetoast-looking guy eating a sandwich and listening to his scanner, imagining that he's riding along in the backseat of a police squad car enroute to a "211 in progress" (or something equally as nail-biting as that). Totally corny, I realize, but it really captured my 14 year old imagination at the time (not that I was a milque-toast or anything, mind you). I knew that I, too, must own one of these tickets to non-stop, action-packed adventure. The fact that my local PD in small-town Utah had maybe one "211 in progress" a year never entered my 14 year old brain.

Shortly thereafter I became keenly interested in cars, girls and beer (in no particular order) and never actually owned a scanner until 1984, but the seed was sown by that commercial, nevertheless.

Anyway, the trivia question is: Does anyone know who the character actor was who portrayed the scanner listener in the commercial? I'm not really looking for a name, but I'm about 87%sure it was the same guy who played in an early-70s sitcom called "The Chicago Teddy Bears", and I'm wondering if anyone else remembers and can confirm my happy memory for me.

Extra points if you can tell me what model of Bearcat he was listening to. I've got my money on the Bearcat III.

There will be no grand prize issued, but I will send an e-mail to Uniden requesting that a minature representation of our winners face be affixed to the end of each knob on the base model of the soon-to-be-released TrunkTracker II. How's that for posterity?

Yeah, I know, you're probably thinking I have far too much time on my hands, but hey, questions like this plague me from time to time. Not to mention those voices...

Paul Judd VE7VKG
Maple Ridge, B.C.

P.S. Anyone remember if there have been any other TV commercials for scanners?

5766. BC 3000XLT for sale (new)

Just a heads up for anyone looking. I ended up with two 3000xlt's so Im selling one. It is brand new in box with everything. I posted it on eBay and it is currently going for 107.50 - which is a crime. I was hoping to get alot more for it. So if anyone's interested go to ebay.com, register and bid on item number 122336766 Search the item number if you cant find it. This is not an advertisement for eBay. I just wanna give you guys a heads up on a great deal for the 3000, new in the box, not used and I'd like to fetch more than 100 bucks for it. Hell I paid over 300 for it. Perhaps we can help each other.

Thanks,
Mike-North Jersey.

-Good suggestion on checking the battery wiring connections. If that doesnt work try a hard reset of the cpu. (Turn the radio off, hold in the CPU reset button, turn the radio on, then off, then release the button.) Note: say bye bye to your programmed memories naturally, they will erase. My 2004 did this once and it took a reset to make it stop.

beep, beep, beep, beep.....

Happy scanning - Ted

Hi Isom: I purchased one a couple weeks agp and works very well.
I am 2.4 miles from a simulcast site and the quality is outstanding.
Another
radio site about 30 ,iles away is understandable scratchy and hard to
hear. Above all don't use the supplied antenna; find a cell phone antenna
with a right angle BNC connector; much better. Try to get the A suffix
version.
George Colina

So, if from Perth (Australia, as opposed to Scotland, but the difference is irrelevant), you use your mobile to call someone in Adelaide, on their mobile, your tiny little handset transmits your voice all the way to their handset?

Uh no. It goes through the land network (okay, with the exception of some expanses, where it might go microwave again)...

Hi George:
Thanks for the information. I purchased mine in May. The closest radio
site is about 20 miles. I have no trouble hearing those frequencies
programmed on my PRO-51, but, not on the Trunk tracker. In trunking
mode it searches but finds nothing. The scanning of local police works
fine.
Radio Shack told me the PRO-51 was more sensitive than Pro-2050 and
that I should get a roof top antenna.
Maybe all this heat, humidity here in South Louisiana may have
something to do with it.

A question: When searching in the trunking mode, and, if I, turn the
squelch off or counter clock, shouldn't I hear that hissing noise?
Because I don't hear anything.

5784. Digital Voice Fallacy

Newsgroup: rec.radio.scanner
Date: 1999-06-27 00:00:00 UTC
From: c9super@my-deja.com
Message-ID: <7l5o0crje1@nnrp1.deja.com>
Source record: 114352

As the following article indicates, one of the arguments for converting to digital voice and/or encryption is to thwart sophisticated criminals by not allowing them to hear they are under surveillance.

A criminal does not need to know whats being said about him, just that he's under surveillance or his house is about to be raided.

By monitoring the signal strength of input frequencies, the use of frequency recorders(i.e. scout) and increasingly less expensive spectrum analyzers, one can easily tell if "someone is in the area" by studying the pattern of transmissions.

Obviously, Motorola won't tell city ofiicials that fact. They'll find out after they've spent millions of taxpayer dollars.

I think Cleve meant to say the PRO-2026...not the PRO-2066 which is
Radio Shack's latest TrunkTracking mobile unit.

Yes, in fact I feel very strongly that the 9000 is the "ONLY" competent wide band receiver especially in the HF region. As even the newest of the breed of PC controlled fall flat in this area as well. Forget the AR8200 as it is all but deaf hear and not to swift in the vhf-uhf either. I would certainly opt for the Bandercom modified units as they are considerably improved over the stock units.

The frequencies that weather radios recieve are in the mid VHF range.
Right around 162 Megacycles. There might be some weather radio links
in the UHF range, though. I know this becasue ther is one in the
Cleveland Ohio area. I think that a link is where a message is
transmitted on a frequency to a transmission site and then from the site
it is broadcast to the general public.

Especially for handheld scanners that are concealed in a pocket, it is difficult to know what frequency you hear a particular intercept on. A guy wearing headphones and glancing into his pocket frequently is bound to attract attention.

How about an enunciator feature that will "say" the frequency/alpha tag of the transmission after the squelch closes but before it opens again?

For example, a Pro-43 goes something like:

"Bravo 2 Two In Custody chtt"

Our Improved scanner goes something like:

"Bravo 2 Two In Custody chtt ONE TWO THREE POINT FOUR FIVE V P D DISPATCH"

You should have the option of enunciating the Freq, the Alpha Tag or both.

If the squelch opens before enunciation completes, enunciation is cut short. On more advanced/expensive receivers, subsequent transmissions are stored in memory (like a skip-free portable CD player) until enunciation completes and then played back. Advanced models would require an Analog/Digital and Digital/Analog converter and memory but this technology is already on the shelf in other consumer-grade products.

Come to think of it, the Opto Scout would be more useful with this feature and a headphone jack.

A few years ago a couple of guys stole two Moto 800MHz radios from a parked rec. dept. truck in Lakeland, Florida. In addition to the parks&rec. department the radios were also programmed for the police and fire talkgroups.
When the burglary was reported the dispatchers were able to "flag" the IDs of the two radios so that if they were used to transmit a warning would show up on the dispatch console and the radios would be on their own talkgroup where they wouldn't distrupt anyone else.
Sure enough, a couple of days later, a dispatcher hears "breaker, breaker, can anybody hear me?" and the warning flag pops up next to the radio ID on the screen.
Well, the dispatcher plays along, pretending to be another CBer and not acting or talking like a police dispatcher.
The crooks, it turned out, had gotten their car stuck in the sand of an orange grove and were using the radios to call for help. They gave the dispatcher a telephone number for "Uncle Henry" and told her right where they were located so Uncle Henry could come with his four-wheeler and pull them out of the sand.
Needless to say, it wasn't Uncle Henry who showed up!
After arresting the two (too bad terminal stupidity isn't a criminal offense) the cops searched the car and found it was full of stolen stuff from a string of burglaries.

On the contrary - IMHO it's a good thing. As news of this spreads, people might once and for all WAKE UP to the fact that cellular radio calls are out there for anyone to hear, and begin to DEMAND truly secure, truly private wireless communications. As long as the issue of monitoring stays swept under the rug, the cellular carriers won't be motivated to do anything more than lobby for ineffective and unenforcable legislation like the ECPA.

I'm sorry if this ruins your private little hobby of eavesdropping on other peoples' phone calls, but in the long run the majority of us will benefit from more secure communications.

>the pattern of transmissions.
Yea, but most criminals are idiots. I seriously doubt that any of the bad guys will ever bother with a signal strength meter. The fact of the matter is, MOST crooks don't even use scanners. The whole issue is so overblown by Motorola and the cops. They want you to believe every crook from the mob all the way down to a shoplifter spends ever waking moment listening to police transmissions. That way, they can justify the multi-million dollar scams they are pulling on taxpayers like us by purchasing these new systems. The REAL reason the cops want secure radios is so the public can't get wind of all their screw ups and illegal activities. And Motorola? They don't give a rats ass about anything other than $. I should know - I used to work for them. - MW

I just picked up a Tennelec Memory Scan-MS 2 scanner. It doesn't have a tuner or crystals. It looks to be at least 20 years old. Does anyone have any information on it, like how to tune it in.

From what I see, it works in the Mhz 30 to 50 range.

Let me know..

Thanks;
Jim P.

Peter,

When I used to live in Miami, I lived near the NOAA Huricane center. As I found, they have a UHF link frequency, which they microwave to the main VHF transmitter site. NOAA uses 416.375 Mhz at this site, however I know that this frequency is not intended for broadcast and only the remote link to the transmitter tower.

I know of no UHF weather transmitters which are part of any standards by NOAA. Even the new Severe Weather Alert Station (like S.A.M.E. recievers) still use the 10 VHF transmitter frequencies.

Hope this helps...

What has that got to do with it? The call will still go through a switch
(exchange) somewhere and that is where any official taps are applied anyway.

You don't think that a mobile to mobile call is totally RF from one handset
to the other when they can be 100's of miles apart do you?

5818. Philadelphia Protester's Page

Newsgroup: rec.radio.scanner
Date: 1999-06-27 00:00:00 UTC
From: David Pinero <openbroadcast@yahoo.com>
Message-ID: <7l3ufrbig1@nnrp1.deja.com>
Source record: 114506

Today, the City Paper, a weekly newspaper in Philadelphia, took a terrific look at the consequences of police communications moving to closed broadcasting systems. Many of the concerns are those of the Open Broadcasting cause I post so frequently about in these groups. The story can be (currently) read in full at the following URL:

http://www.citypaper.net/articles/062499/feat.coverstory.shtml

Parties interested in protesting against this action can now utilize the Philadelphia Closed Broadcasting Response Resource Page located at:

http://home.tampabay.rr.com/mercury/truth4000/action/philadelphia/philadelphia.htm

The page features preconfigured templates for e-mail via the E-The People service, as well as links to and contact information for government officials and key elements of the local media there.

Anyone concerned or curious about the move of police radio systems to closed digital systems which are largely unmonitorable by the public should visit the Open Broadcasting web site indicated in the sig of this message. For the first time in the history of this cause, a resource has been established to empower such concerned parties of Philadelphia and elsewhere to let their concerns be known. Philadelphia has not tipped yet, the cement of policy has not been poured. Now is the time to use the resources at the Philadelphia Closed Broadcasting Response Resource Page to challenge yet another blind implementation of a closed system. With the hallmark of today's media attention, you can make a difference NOW. DO it! Even if you don't live in Philadelphia, a closed system is coming to you soon.

Dave

I remember working in the food industry in the summer of 1970 and we got this new Litton? "Radar Range" oven, with the black screened door WITHOUT the glass - guess they didn't figure the radiation would harm us(?!) at first. Anyway, the door screen was designed with even rows of small round holes, and we threw all sorts of stuff in and watched it explode. The funniest thing I saw was a cook place an egg in it, wondering how long it took to hard-boil, and he watched it cook with his face a few inches from the door until it BLEW, and when he turned around, we were hysterical at the sight of a thousand little yellow dots on his face in the same even rows as the door screen. I'll never forget the look ON his face or the look OF his face at that moment!

I own the Bearcat BC60XLT-1 as a supplement to my trunk tracker. It got it at Wal-Mart for around $100. It has 30 channel and does well in a suburban area. IT does not do Aircraft. It Also has no 800 mhz capability at all so you'll need to make sure your local Public Safety agencies are in it's range. It is also a hand held but does all right with the stock antenna. I add a speaker through the speaker jack though for better voice quality.
Good luck.
BTW it's pretty simple to program.

The glass provides zilch radiation shielding. It is a pretty good
dieletectric. The theory is that as long as the holes in the screen
are appreciably smaller than 1/4 wave, very little microwave energy
can in fact escape. F is about 2450Mhz, so the wave length is about
12.cm, 1/4 wave is 3 cm, so the holes need to be on the order of 3mm
or less, that is about 1/8th of an inch...

Correct. The glass is there so if something does blow up in a
microwave, it doesn't get shot against the room (or, in someone's face.)
Radiation protection is provided by the screen, not the glass.

I am currently listening to my local sheriff dept. Seems a guy found a lost police radio and is talking to sheriff dispatch.

They remotely disabled the radio and now are working to re-enable it so they can tell the guy where to go and give it back.

The guy at first was funny.....

"Hey I found a little black ray-dee-o.... hello... hello"

They got the radio reactivated and are directing him where to go to return it now.

Some deputy will get into trouble for losing his radio and some citizen will get thanked for doing his good deed for the day.

Let's get this sorted out for once and all..I have said this before these are newsgroups. All im doing is posting on a Newsgroup If it upset's you that much then just dont download the post it's easy and simple... I not being funny or nasty at all. I just trying to get the maximum out of the site with the least amount of cost to myself and if im wrong in wanting that then Im sorry. But at then end of the day it's up to the user not the read the post after all the group is not moderated in any way and if one post yestersday is classed as "spamming" then we might as well just not read the NG's at all.I could of stuck a password on the site and made everyone join the mailing list to get the password to access the site but why push people into a corner it's not fair..Im not out to upset people and I dont think I am. If people want to get upset about it then it show's how small minded they really are..

>as long as I have... Knowing what I know now... I would have used this
>money
>to buy cell phones and pay for the service for 20 years!!!
>

Does this imply you were (are) one of thoses type who makes every
irrelevent phone call on a
local repeater phone patch? If so that was not intention of phone
patches originally. Where I live we
we have a local Doctor and his wife (both hams) amongst others clutter
the local repeater with very
questionable i.e. conducting business activies over the phone patch.

>As for expensive CB... have you listened to 75 meters or 20 meters
>lately....
>I hear the same language there that I hear on Channel 19 .. or worse.
>

It happens in all services including Cellular. The same rules apply to
Police, Fire, Cellular, PCS, etc.

>Lets face it!! Hams are so complacent that the FCC will knock on their
>door and cite them before they will know that they have lost all their
>frequencies!!!
>

The FCC's complacency started all the problems on 75 and CB. Back in the
70's when the FCC budget
wacked by GAO. When I started in ham radio in '68 the problem was not as
bad as it is now.

>It is a dead hobby.... it just hasn't smelled its own carrion yet!!
>
>I can go places and talk to people on the Internet that i use to fight to
>talk
>to on HF... I have 200 countries confirmed on HF... Could do that in a
>week on internet...
>

So what is the point, I can pick up my telephone to do the same thing.
Not as introverted and isolated as
the Internet. However, the phone bill would be so large to not only fund
Ham equipment purchases but a
building to house it in.

>
>Hams WILL lose their spectrum... bit by bit... because they won't clean up
>their
>act not polince their own!!

Hams will lose spectrum only because "Money Talks and Bull Shit Walks".
Learned this lesson after working
5 years in DC under Regan adminstration. Thanks to Media hype of PCS and
other technologies of the future
Spectrum Auctions are large amount financial icome for FCC.
>
>Oh well... street corner preaching!!
>
>Fare well ... and find a new hobby!!

Did you?

That was absolutely hilarious! I heard him say "I'm just tryin' to return this here ray dee o, I'm not tryin' to be a smart ass, I don't want to steeeel it, I'm just a campin - and I want to return it"

Then the dispatcher would call "Control to the gentleman who found the radio..."

It was very funny!

Jeff

-Rich Wells REALLY needs to have a desired feature section on his web page where we can submit our ideas. After a few months he sends copies to radio shack, uniden, gre, yupiteru, alinco, icom, yaseu and kenwood and anyone else who wants to please us (relm? regency?)

Okay, I wont be tooooooooo greedy...

-Handheld w/4-6 disposable AA batteries & charging circuit, comes w/nickel metal hydrides or lithium cells
-2000 memories in 20 banks of 100
-.5Mhz -to- 2000 Mhz
-NAM/WAM/NFM/WFM/USB/LSB modes
-10 linkable search banks
-1000 lockouts from search
-Optional auto hold in search mode
-Individually selectable delays on memories
-Programmable step sizes from .05 Khz to 100 Khz
-Doesn't default freq steps in search (If searching 461.0125 to 461.9875 in 25 Khz steps it stays on the interstitials)
-CTCSS/DPL receive and detect/display
-S Meter
-I dont really need a color display (would be cool though) but I do need an easy to read display that works from above or below (wide angles & big figures)
-Alpha Tags for memories and talk groups
-Scrolling menu system for most functions
-Moto/EDACS/Johnson Trunking
-Backlit keypad and display w/on/off switch
-Conversion scheme and performance like the yupi's
-100 steps searched or memories scanned per second
-Entering zero in memory auto locks it out from scan
-Lockout review in scan and search, selective restore
-Water resistant / shock resistant belt carry case
-service search like some of the bearcats
-auto program empty memories in selected banks from search (one of each detected active, no re-writes, including PL/DPL tone activity)
-2 way computer interface port (I'd settle for civ though)
-Data skip feature that really worked
-Drop in rapid desk top charger / operating stand, like a convertacom, with it's own antenna and audio jacks
-Audio quality as good or better than the yupi 7100
-Tone control
-Discriminator jack
-Heavy duty (or sealed) type keypad
-Metal chassis or at least a metal frame
-Extra scan and manual buttons on the top of the radio

-detented tuning knob w/good feel and sturdy mechanism
-Reprogrammable default mode and step sizes for different bands
-Dual VFO's
-Separate bank of 20 priority memories

The funny thing is - just about every one of these features, or a part of them, have been made available at one time or another on some radio. Some folks say the perfect radio will never be made - you wouldn't ever need to buy a new one! Don't pooh pooh some of the more outlandish suggestions that have been made here - have you seen the latest generation of palm tops? - pretty astounding stuff in packages a great deal smaller than our radios at even cheaper prices! The newest high end palm pilots have amazing displays.

I'd pay $800-1000 for a handheld with the above features, provided it delivered excellent selectivity and sensitivity, which is all I really want, anyway!

Happy Scanning - Ted

5852. SCANNER Capability: How do you test

Subject: ??TESTING SCANNER
Date: Wednesday, June 16, 1999 17:14

I was listening the other day to airband on a cheap department store radio
and it was picking up lots of air traffic and it was coming in loud and
clear.

However my Bearcat 3000 scanner was not????
It was picking up some traffic but not near what this other radio could.

How do you know if your scanner is doing all it should be able to??

Hi Phil,

I noticed your very positive comments about the 895. I own the Pro 2050, 60, 90, 2042 (I like scanners). I was thinking about getting the 895, but was not sure if I could justify buying it to myself (and my wife). I was wondering if you could post your likes/dislikes about this model. I know it's being sold for a very nice price right now, and the trunking is not really an issue with me, as LA (where I live) is EDACS anyway. Personally, I loved my Pro 90 so much (because of other features), I bought the 2050, which is basically the base version of the 90. Does the 895 have other features that make it a good buy (and does it have good reception)?

Look here: They make a battery insert for the BC3000 in NiCad ($19) and NiMH ($25), they also have the complete battery pack (a 1000 mAh NiMH battery pack will run you $43).

All of the SDSO talk groups on the new 800 trunking system are digital, so there is no current way to listen in on them.

4 Channel UHF Xtal Hand Held Scanner.

Made for Craig, but looks like it may be made by Regency.

Works great!. Just needs battery holder contacts cleaned and
new AA batteries.

Has 461.075 in Channel 1 and 461.425 in Channel 2.

Used standard 10.7 if xtals.

Best Offer incl.. Shipping to ContUSA

I went to the Uniden web site last night and looking for a shipdate on the 245 and found the smartscanner software download. Does this mean that the July ship dates that I have heard could be real?

True the UK has fully digital trunk network and has had for many a year now.
But the digits over the air interface are not the same as the digits over
the trunk network. The former may be encrypted the later are not. Digits do
not make a secure link.

BNC: Bayonet Neill Concelman
TNC Threaded Neill Concelman

Mr Neill and Mr Concelman worked at Bell Labs and they also invented
(respectively) the N and C connector.

The "British Naval-" thing seems to be a popular version, where does
that come from? Extensive use on British ships?

/Marcus

At the risk of being labeled a "netcop" or some other such drivel, might I suggest:
1) Not posting an auctioned item as "up for grabs", it is very misleading (not a big deal but not very efficient); rather, use the "FA" term;
2) Finding out WHAT room your are posting ads in before posting them. The ads/links you post are strictly CB items, but they're posted in a scanner room.
3) If you are selling items of CB nature, it would do you a LOT more good to try strictly in CB areas, you'll have more takers and less people like me questioning your tactics! :-)
Mike

Terrific! I'm thrilled to know that you're finally going to stop posting hundreds of off-topic posts here each month. It is also great to know that you're going to start practicing what you have long said you were going to do. No more lying, impersonating, carrying on personal vendettas, obssessing about others who are more capable and knowledgeable than you about radios, no more making false accusations to various police departments around the country, no more computer trespassing, no more lies. It is great to hear, John that you have decided to change your ways.

Well that is nothing. I read in a local paper that a neighbor was
listening in on another neighbor using one of those parabbolic dish
things. Ain't that something?

That was one hell of a story....

Rumor has it that such a system is in the planning stages here in Phoenix also.

Let me tell you some things that I gleaned by reading between the lines on this one:

This "new" system that Big M is selling to Philadelphia is hardly new. It is the ASTRO system, an APCO Project 25 compliant system developed by Motorola in conjunction with the APCO25 steering committee. It's been out for quite a while now, and yes, it's been prone to failure in urban areas.

The reason for this is simple. On a conventional system, if there is interference on the system, the human ear can still decipher what's being said, even in heavy adjacent channel interference (which could happen inside a steel structure). On a digital system though, the voice is converted into a data stream and separated into packets. These packets must all be a certain length, and contain a set sequence of numbers, called a frame synch. Introduce noise into that system and the frame synch is lost. Without the valid frame synch, the system stays closed and the transmission is never heard. Analog trunked radios already suffer from this, despite Motorola's impressive bit interleave and error correction technology. Introduce digital signals, DES encryption and narrower band splits, and there's a real problem there. Forget about a drug dealer monitoring your system, how about one setting up a low power analog transmitter in an adjacent channel. Or even worse, a wide band signal that slops over the whole range. You're 51 million dollar radio system is 100% useless in that area, allowing the criminals to pick off cops at random knowing full well they can't call for help. Nice. Did ya stop to ponder THAT one commish?

In the case of the Philly system, I would hope that these people realize what they are doing, especially in the case of block watchers. These folks are there because YOUR AGENCY ISN'T DOING ENOUGH TO PROTECT THEM!!! Hello?

Anybody out there??? Here in Phoenix, the block watchers aren't viewed as a bunch of vigilantes "driving around in their cars, trying to get involved in crime-fighting." They are a valuable part of the Phoenix PD. I have never been looked at like "Oh you're one of THOSE people" when I've provided information because I heard the call on my scanner and saw the guy they were looking for duck into an alley. In my neighborhood, the police appreciate any and all the help they receive from scanner listeners, and our police would never badmouth anyone who cares about his or her community enough to help in this manner. I find the comments of Mr. James absolutely appalling. Nothing like telling people who VOLUNTEER their time to help the police "thanks for nothing, get lost". Is the commissioner's post an elected one? If so, then you Philadelphia voters know what to do....

There is definite interest in the Project 25 committee for scanner manufacturers to develop an APCO 25 compliant scanner, to ease interagency communications. Many agencies rely on scanners to provide them advance warning of a situation developing in the next town. I have yet to see a highway patrol or sheriff's vehicle that doesn't have a scanner in it. These folks need to learn the value of scanning as a whole and not use the very rare instance of a crook having a scanner as an excuse to encrypt all police transmissions.

Philadelphia should consider this fact when building the new system and leave the traffic open (unencrypted) so that other agencies with APCO compliant radio systems and (when they come out) compatible scanning receivers can monitor these transmissions. As was said in the story, they should only encrypt the sensitive information like drug raids in progress and so on. This is a more secure system, because you can re-key the involved radios by hand, and then go to the scene and use them, giving the element of surprise. A fully encrypted radio system would require them to use OTAR (Over The Air Rekeying), which could be a problem in two ways. For one thing, if an officer's radio receives interference (again, very likely in an urban area) than an invalid key could be sent to that radio, effectively shutting it down for that officer. It's probably a simple matter of turning it off and then on again to reset it, but what if the officer has no idea it's happened? Not good....

The other problem is just the nature of OTAR itself. It's no different than those magnetic "hide-a-key" things. Very easy for someone who knows what they're looking for to find. And once they have found it (Not too difficult when you think about how a digital system really works. Do a dejanews search for apco25_scanner@hotmail.com and read what he said about it.) guess what? They have everything they need to intercept the new key as it is sent out, making the system completely open. Anyone who knows the protocol and is a fairly competent PC programmer can crack the encryption methods used by the ASTRO system. And just how difficult it is for someone to acquire Motorola's protocol information? Remember POCFLEX? Enough said... If it goes full encrypted, it is much more vulnerable to being cracked, because this information will be broadcast with *every* transmission sent.

Another thing that Philly could do to emliminate the rift between the police and it's citizens would be to simulcast routine traffic over the old repeater system - why not?? It's not like it's doing anything, and should the system completely fail, they have a backup! That would allow them to use their new system, control what the media/public has access to and most importantly, NOT have to get involved with programming special radios for the press! Anyone with a scanner is all set - geez, I'm not even a city official, and I just solved their problem right there for free. Where's my medal? ;-)

Hopefully Philadelphia will do the right thing here. I'll be closely watching the details (and yes, I'm sending a copy of this very post to the protest page, Dave. Thanks for sharing this with us!)

>other features that make it a good buy (and does it have good reception)?

I think the 895 is a great radio. Trunktracking, built-in CTCSS, mil air, pc control, etc, etc. You can't beat it Add a discriminator tap and you add a whole new realm of scanning, as it works great for data decoding as well.

I did have a couple of dislikes, but they're really trivial in the grand scheme of things. Firstly, the radio itself is huge, making mobile mounting somewhat cumbersome, and it didn't ship with the PC cable, which bothered me. In my opinion, putting a normal rs-232 9-pin serial port on the back would've been a better idea than the 5 pin connector they used. So, if you want to control it via PC, be prepared to buy a seperate cable for it.

The only problem I've ever had is sometimes the CTCSS doesn't kick in quite right, and you have to turn the CTCSS mode off and then on again. (I've been informed that this was an early firmware glitch and the newer ones don't do that, so you shouldn't have this problem.) Other than that, it's outperformed all my other scanners by a mile. Plus the ability to load frequencies via computer in a few seconds makes it a top pick, in my opinion. Sure, there's better radios on the market, but you'll spend enough for 2 895's if you get one. For the under $300 market this is my pick (At least until I see a 245 - then I might change my mind!) ;-)

Hope that helped,
-Phil

What else would you expect from an AOL user? Please, no comments about Webtv users. I'm fully aware that I just opened a can of worms.

You wrote:
>At the risk of being labeled a "netcop" or some other such drivel, might I suggest:
1) Not posting an auctioned item as "up for grabs", it is very misleading (not a big deal but not very efficient); rather, use the "FA" term;
2) Finding out WHAT room your are posting ads in before posting them. The ads/links you post are strictly CB items, but they're posted in a scanner room.
3) If you are selling items of CB nature, it would do you a LOT more good to try strictly in CB areas, you'll have more takers and less people like me questioning your tactics! :-)

From: David Schoenberger <dtscho@mail.wm.edu>
Message-ID: <7l9fda$9vh$1@autumn.news.rcn.net>
Source record: 114326

I am beginning work on a project comparing the communications systems of major East Coast cities. I am trying to determine how spending and technology affect the efficiency of communications systems. The plan is to visit approximately a dozen cities from Boston to Miami, and analyze the police and fire radio systems in each. Hopefully, I will be able to tour communications centers, ride along with police, and interview some of the radio technicians, all in an effort to see how well the public is being served by the radio systems in place.

I will complete this project in the summer of 2000. Currently, I am doing research (choosing the cities, finding information about communications systems, etc.). I am in search of articles on the Internet pertaining to public safety radio systems. These could include articles about funding and technology. Anything related to the radio systems would help. (By the way, I have already seen the excellent article from CityPaper about Philadelphia's proposed digital trunked system.)

I'm excited about this project both for its relation to the scanning hobby, and its uniqueness. I also believe the information I obtain could be useful to public safety planners and officials. I would greatly appreciate any assistance. Thank you.

Ok, here's my possibly-faulty understanding of how it works:

In California, the CHP uses these "mobile extenders" statewide. The car "dispatch" radios are 2-frequency simplex in the 42MHz and 39 MHz band. The portable radios use 154.905 simplex, which are received by the VHF High-band radio in the car. So, yes, it's a third frequency, in that sense.

When the officer gets out of the car and/or activates the extender, all messages received on the low-band radio are retransmitted from the car at 3/10 watt on 154.905. For officer safety reasons, the car's transmitter "samples" the frequency every second or so when transmitting, so if the officer needs to call in, his portable will preempt the "repeater" in the car and go through to the dispatcher.

Also, early on they had trouble with heterodyning and terrible interference (in both directions) if several units were out at the same location. Every car suddenly became a repeater station on the same frequency. This was solved by using a tone burst when activating the extender. As each additional officer activated his extender, his/her car radio received the tone and became the default repeater for all portables in range. I believe this is done with a combination of single-tone burst and PL tones, but I'm not sure exactly how it is accomplished. Nor do I know how the reverse is accomplished when units leave a scene.

Clear as mud?

Ok, it's digital, but is it Encrypted?

San Diego County Sheriff's Department's URL:
http://www.co.san-diego.ca.us/cnty/cntydepts/safety/sheriff/

San Diego County Sheriff's Department, just like the City of
Philadelphia, doesnï¿½t want neighborhood watches using
scanners for "vigilante efforts,"

> Perhaps scrambling police conversations protects the public
from cerebral criminals, but other public safety measures will
be curtailed when communications go digital.

Just ask volunteers in any of Philadelphiaï¿½s 600 neighborhood town
watch groups that have contributed to the cityï¿½s falling crime rate.

"Town watch groups are the eyes and ears of the police department,"
says Sam Ricks, an active member of a town watch group in the 12th
police district (encompassing the Kingsessing, Elmwood and Paschall
communities). "If the police clip off our ears, our role is greatly
diminished."

Just as the media depend on scanners, so do the approximately 15,000
neighborhood town watch volunteers in Philadelphia.

On a regular basis, Ricks says, he and fellow volunteers successfully
foil criminal offenders based on information gleaned over a scanner.

"We donï¿½t follow police on scanners," he says. "We generate 911 calls."

Philadelphia officials express little sympathy for Ricks and his cohorts. The city doesnï¿½t want neighborhood town watches using scanners for "vigilante efforts," anyway, says Joseph James, a deputy commissioner in the Department of Public Property.

"We donï¿½t need people driving around in their cars, trying to get involved in crime-fighting."

Read the news about here:
---

800 MHz Transition Team

Exciting changes lie ahead for the San Diego Sheriffï¿½s Department.
Along with many other city and county agencies, the Sheriffï¿½s
Department will at last be able to communicate throughout the entire
region using a new Motorola 800 MHz radio system.

The project, called the Regional Communications System (RCS),
includes the City of Carlsbad, many of the fire protection districts,
and numerous city agencies. What is most exciting about the RCS is the
ability for field units to be able to talk to each other,
regardless of where they are in the county.

This is, unfortunately, quite true. All the regulations in the world
aren't going to mean diddly squat unless either (1) those subject to
said regulations voluntarily comply with same, or (2) there is
sufficient enforcement to deter would-be violators.

The thing is, the problem isn't just on 75m, I hear the same garbage
on 20 and on 40, and these aren't no-code techs on HF. Run the
callsigns through a callsign server on the Internet and you'll find
out that they're General and Advanced and Extra Class licensees, who
are running a full KW right next to the rebroadcast shuttle comms from
WA3NAN and their language is every bit as bad as anything you'll find
on CB. If the code is supposed to keep people like that from getting
onto the ham bands, somebody apparently forgot to tell these guys.

> So what is the point, I can pick up my telephone to do the same thing.
>Not as introverted and isolated as
> the Internet. However, the phone bill would be so large to not only fund
>Ham equipment purchases but a
> building to house it in.

The point is that if one simply wishes to communicate with persons in
other countries, there's no need to waste one's time learning Morse.
All you need to do is download mIRC or Internet Phone. I'll have
already communicated with 200 countries in the time it takes the next
guy to learn the code. All it takes is a local call to my ISP. So this
is no longer a valid selling point for ham radio, or for the code
requirement either. This is 1999, not 1899.

> Hams will lose spectrum only because "Money Talks and Bull Shit Walks".
>Learned this lesson after working
> 5 years in DC under Regan adminstration. Thanks to Media hype of PCS and
>other technologies of the future
> Spectrum Auctions are large amount financial icome for FCC.

And large segments of unused spectrum, caused by general disinterest
on the part of non-hams due to general snobbishness on the part of
code-geek hams, provides an excellent source of material to be
auctioned to someone who might actually make use of it.

>As for expensive CB... have you listened to 75 meters or 20 meters
>lately....
>I hear the same language there that I hear on Channel 19 .. or worse.

Something everyone seems to forget: Channel 19 on CB is the nationally agreed upon truckers' channel. These guys aren't radio hobbyists, they're professional drivers. They're not out on the road to activate grid squares - they're out there earning a living.

>Hams WILL lose their spectrum... bit by bit... because they won't clean up
>their
>act not polince their own!!

Hams have already started losing their spectrum...checked out what USED to be the bottom part of the 1-1/4 meter band lately? You won't find hams there anymore, you'll find United Parcel Service instead.

But it has niothing to do with any failure to police the ranks, and eveerything to do with the fact that portions of the radio spectrum that were underused got reallocated. Plain and simple, there wasn't enough ham activity there to warrant allowing the amateur community to retain its allocation.

And this is what will eventually cause the death of ham radio if things don't change. Someone earlier in this thread remarked that if you take the code out of ham radio, you take the challenge out of it. I think that's utter nonsense...as if there was no challenge in working someone 5000 miles away on USB on HF? If it were all that easy, awards like DXCC wouldn't mean much, would they?

No, there are plenty of other modes and plenty of other challenges available in ham radio...and none of them have anything to do with learning some antiquated mode of communications that was invented over 200 years ago for the sole purpose of sending messages over a hardwire telegraph line. It is the failure of the amateur community to keep up with the times that is causing people to turn elsewhere, and it is this that will ultimately cause the death of ham radio...not the potty-mouths on 75 meters.

After all, the 11 meter band (CB) still sounds pretty busy to me, it doesn't look like the potty-mouths there have caused any lack of interest in the band!

>Fare well ... and find a new hobby!!

I have...I monitor military comms on HF, VHF, and UHF. Nothing there that's going to shock anyone's sensibilities, unless the thought of listening to real-world warfare as NATO fighters "splash" a MiG-21 over Kosovo is too much for someone to consider...

I agree with you Tom and I was probably out of line using profanity. But
what this guy offered was not a reply but a lecture on radio ethics,
with the assumption that my intent was to break the law. All I wanted to
know was why I could only transmit to certain radios, which by the way
were not mod.ed to broadcast or recceive illegal bands, thats how they
functioned out of the box. It does transmit on said freq. b/c I can
receive on the other radio, so I do beleive that some sort of filter is
at work here. If my profanity offended you I am sorry, but the tone of
"bill's" message offended me, but maybe he doesn't know any better.

Let me make sure I understand you here. Are you to have us believe
that you NEVER pay any attention to the TV news when there's an air
disaster? You just flip on Nickelodeon is that it? What, you watch
the weather report and the whacky "finally tonight" story and shut the
TV off and go back to monitoring NOAA?

Give me a personal break!!! Listening to the scanner is ALL about
hearing accident or emergency details. Maybe where you live these
things don't happen very often but where I live they are a part of
every day life.

I agree that "ambulance chasing" and standing in the way of rescue
workers is stupid but that's not what responsible scanner enthusiasts
do. Sitting at home monitoring an incident as it unfolds and maybe
getting a more accurate depiction of the story does not make someone
sick and morbid.

As for the "media sharks" you refer to, you can continue to call them
that as long as you refuse to watch stories that involve car
accidents. plane crashes and personal injury or death.

Yes we're here to share and learn and I think the only thing we
learned from this whole thread is NOTHING about the original question.
We also got to see a bunch of uptight know-it-all people share thier
views of how we should all conduct ourselves.

Hi!

If you`re looking for some facts about German police and rescue VHF radio you can have a look at my homepage. Nothing special (just some frequencies, channel tables, PICs from the radios used in .de), but I think there is not very much available about this on the web in English. In .de we often can hear foreign countries on our 4m bands VHF relais (75/85 MHz), perhaps also abroad sometimes German police radio can be received...

I am looking for more info for the Motorola 7100CP Mobile Data Terminal.
I tried Motorola's Web site with no luck. I need to know is it a hand
held or vehicle mount? Is it capable of MDC-4800? Info likethat.. A pic
would be great...

Thanks all in advance...

Keith: the site didn't work.... but thanks..

Man! I thought the radio hobby was supposed to be fun and create a sense of comradeship among the members of the fraternity who share the common interests. However, after reading some of the crap posted here and the answers to it I'm ashamed to admit that I'm a ham radio operator and, yes, that I have a couple of scanners.
What happened to "friendly" hams and civility? We've condemned the CB operators for years for their behavior but we seem to have lowered ourselves to that level from what I've read here. And, no, I don't believe the no-code licenses are to blame....it's the lousy attitudes and superior God-like demeanor of some in the hobby who feel that, as the saying goes, their fecal matter lacks an aromatic quality.
How about acting like mature men and women [boys and girls???] and treating each other with at least a little respect? Is that so difficult?

You are VERY correct here with your statement!!! I totally
support your ideas.

I have worked long & hard with other individuals to try to make
this NG a safe & positive place.

But, believe me as there is supporting evidence from Dejanews,
this NG was FAR worse at one time. When I first arrived on this NG a little
more than 2 years ago I found this NG is complete turmoil & an all out flame
war. There was one certain individual who was causing a lot of problems
here & trying to get others kicked off their ISP. Myself & others worked
very hard to improve the situation here, which took 2 years until last
summer when the problem individual lost his internet access by his ISP.
However, some problems still remain as his supporters still cause problems
here at times.

Hang in there. This NG has improved & will continue to get better
with time!

Of course it does't go RF from mobile to mobile, BUT it stays in digital format from exchange to exchange. ie it doesn't revert to analog, fed along microwave links or cable or fibre and then reconverted back to digital for the final short RF part.

No, I'm not quite that daft :-)

If mobile me rings fixed Freddy and he's a permanent tap, then they
get it all. It's rather difficult to put a wire tap on a dynamically
allocated digital inter-exchange circuit between base stations via the
switched net or otherwise.

Let's just say that where I work they have the gear to intercept
off-air and keep track of certain users that way. "Taps" are for wire
services only.

Oh Geesh, another diatribe from an 'expert' with the I did you can too
bull hockey.

Some HAM bands already sound WORSE than channel 19 on a
saturday night when the bars close. And guess what? They are
predominately in the GENERAL and above access areas!

Grow up Michael....

As to your frat analogy... BFD! I wouldn't want to join a frat that
hazed
it's pledges either, just like you do....

If you want a sense of accomplishment, I'll give you one. First throw
out the code, then put something REAL in as a test. Design me a
dual modulus prescaler for a digital PLL to give automatic repeater
offsets. What? Can't do it? Then you're not a REAL HAM, you're
just an appliance operator! Go back to CB where you belong, or at
least stay off VHF and above.

Sound assinine? You bet it does. It's the same damn drivel you posted,
just flipped around.

Hi,

I just used the serial for Airnav 3.0 on v3.1, doesn't work, tells me that the Registration code and personal id dont match (or something like that).

The code I used was the Azrael [PC] one, ID 069AZR, and reg.code of 692939861. Is this wrong?

Failing that, anyone got a serial that works? Thanks!

To all tone decoding enthusiasts!

WintonePRO Beta 2 is now being made available to select testers!
We are interested in folks who want to put the software through
the wringer, and tell us what you think!

WintonePRO features :

* Software Decoding with your Sound Card, No other Hardware required
* DTMF, CTCSS QuickCall I&II capable
* User definable single and double tone sets - Define your own!
* Record sound squelched Compressed Audio, in as little as 6MB/Hr
* Suite of visual audio spectrum analyzing tools
* Fully Windows 95,98,NT compatible
* Plug-In Support for RedShift CE-232 Scanner Control Software

Requirements :

* You must have a Pentium or Faster CPU
* Windows compatible sound card
* HAM Radio, Scanner, or another audio input source
* Usage experience with Wintone 2.0 Helpful, but not required

If you are interested, please email us at wintonebeta@steaksandwich.com.
You will recieve a confirmation email giving you a URL.

Please note, that due to an unfortunate ISP incident, our previous
tester database was deleted. If you had contacted us before, please
email us again, so we can get you put back in the list!

5942. Re: Digital Voice Fallacy

Newsgroup: rec.radio.scanner
Date: 1999-06-28 00:00:00 UTC
From: Sluggo <Sluggo@kickass.com>
Message-ID: <NLMd3.1516$WH3.559326@homer.alpha.net>
Source record: 114422

I sadly hope that you don't REALLY believe that cops want digital radios so that the public doesn't get wind of "all their screwups and illegal activities." That seems to imply that ALL the other cops on the frequency must be covering up the BS from the few who might be screwups. I'm used to that kind of stereotyping, but I still hate hearing it. I'm really beginning to understand what a member of a minority group must sometimes feel, because as soon as my uniform goes on I become one: laughed at, scorned, called names, stared at, assaulted, blamed for problems, etc. And I'm nothing more than an average guy trying his hardest to be fair, make a living for my family, and come home at the end of my shift!
Ok, I'm off my soapbox now. First of all, 95% of cops I know (and work with, if you haven't figured it out yet) don't even have a clue whether they're on VHF, UHF, 800, trunked, analog, digital or whatever. But what many of us do know is that some of our radios SUCK. Many systems are outdated, have poor and spotty coverage, and are sometimes subject to going down at very bad times. Preventive Maintenance? What's that??? That would cost money, we'll just fix the system when it breaks, who cares whether the lives of the cops, citizens, whoever, is at risk. I'm not saying that a digital system will alleviate all those problems, and I could really care less if Joe Scanner is listening to us going to a call. But I do think about it regularly. Sometimes I hope the bad guys have one and are gone before we get there. Other times there's that typical paranoid cop voice in my head saying "What if they have a scanner AND they're still here waiting to blow me away so that they can finish and make off with their (fill in the blank)?" Very, very rare a bad guy has a scanner, but you come across them just enough to make you really think about what you said on the radio as you are en route to a call.
Here's a nice example that really made us do a double take. We were getting ready to serve a search warrant of the apartment of a drug dealer. After we were inside and searching the house, we noticed that everytime we keyed up one of our portables something was vibrating, like a pager or something. Turns out this jamoke managed to obtain some sort of vibrating, wideband receiver. Any transmitter of high power in the area, or of low power within a few feet would set this damn thing off (i.e. portables, body wires, etc.) But thanks to being an idiot, the guy lives a block from the antenna towers at the PD, so the silly thing was vibrating contantly. Anyway, definitely an isolated example, and not really a scanner, but one of those "things that make you go hmmmm".
I'm not against scanners, I know few cops who are against them. I own several myself, have an amateur radio license, and feel enjoy meeting people into the hobby. I've had many more good encounters with scanner listeners than bad ones.
Whew, ok, just had to vent a little, I really hate being (implicitly) accused of trying to cover up my, and everyone else's, screwups and illegal

activities, whatever those may be.
Let's see what kind of flame war this stirs up, though not my intention.

-John

"Email address definitely not real...get over it. "

Yes, there's always a chance that a bad guy might have a scanner, but
any department with even a little bit of creativity can find workarounds if
that is a major concern.

Source record: 114423

Hello Chris,

I am happy to hear that you have ended your comments in this thread. If that is the case, these will be my last also . . .

My main question still goes unanswered:

If you didn't intend to use the info gained (in the answer to your original question) to "transmit to the police", then why had you already tried it and failed???

You DO realize that, by simply "transmitting" from one of your transceivers to the other on the police frequency, you have broken the law? Oh, I suppose no one will care since, more than likely, no responsible party heard you do so. But, remember this: ignorance is no excuse! My purpose, in my replies to your question, was to discourage you from doing so, AGAIN!! You see, the "radio hobby" has already suffered enough from guys like you . . . It doesn't matter if you are a Ham or not - when you are caught (and, you will be caught) interfering with public service traffic, the headline will read: "Ham Radio Operator fined for Police interference" or something like that. Even though you may be correct in describing yourself as "the ignorant one here", you pale in comparison to the ignorance of the media!! To them, more than one gun is a "cache" and everyone with a radio is a "Ham Operator."

I do have a suggestion - Spend a little time reading about radio. Once you do, you will be surprised at what you can learn. And, once you have done that, you just may be able to answer your own question.
However, as with anything worthwhile, ethics are important. From your actions and comment ("attept (sic) to preach radio ethics"), you don't seem to care about such. Perhaps, in time you will. Until you do, I hope and pray that you will not become a Ham because we already have too many like you in our ranks . . . You see, there are those of us who cherish and revere the privileges and opportunities afforded us by our Ham licenses. And, we don't want a bunch of clowns lousing up our little playground . . . You, sir, are, currently, a clown - Grow up, learn to handle responsibility, grow a little "wisdom" and quit stealing from those of us who have paid our dues.

And, one more thing - When someone calls your hand for being or doing wrong, admit it and learn from the experience instead of moaning and groaning that you were mistreated . . . Remember, YOU wrote: "But hey I am the ignorant one here." Now, go out and do something about it - Indeed, YOU have much to learn!!

Good luck,

Bill

I have a several year old UBC3000 scanner. I like the scanner, especially the multi-priority feature. However, the battery life of the BP2500 is terrible (3 hours at best, and they don't last for many cycles) and they are really expensive now. For $50-60 per battery, I might as well find a new scanner.

So, I have several questions:

1) Does anyone have a source for BP2500 batteries (new or reconditioned) for less than the $50-60 I've seen?

2) I'd really rather have a scanner with better battery life. Any scanners using NiMH or LiON batteries? I use the 3000 mostly to listen to my local police, fire and EMS by sitting on channel 1 with priority set on (the priorities for each bank are the local freqs), and then scan some or all banks when I want to hear more than just the locals. I carry it around the house a lot, so I want portable. Any recommendations for a replacement to the 3000? Where should I buy it?

Thanks for your help.

No, not if you're referring to the board for the 760xlt. It won't work with the 2026. It's too bad too, because that radio could really use a tone board to cut interference.

Though you won't find it at the price you mentioned, see this month's
QST review of the AOR 7000B. Their verdict: For a scanner which
covers the bandwidth that it does, the AOR 7000B is quite good. Lots
of bells and whistles too. However, if you're serious about SW or MW
listening, get a radio dedicated to that task.

>Because I don't hear anything.

Nope. Trunktrackers mute their audio in trunked mode unless they are
receiving a transmission. If you listen really closely or with headphones,
you will hear, very faintly, the data channel buzzing away while it waits
for a transmission...

If you can scan in the areas of TV channel 3 or 4, why don't you use a
cable TV set top box? They're pretty good and they're cheap.

I used pin line sockets mounted in the side of my 43 for disc output. These are very small and pretty easy to melt into the side of the case. I have used other jacks also but the type I used isnt easy to find. I got a 1/8" mini phone jack from an old mini tape recorder. It fit stacked on top of the power input& charger jacks. I like the pin lines better though. Ira

Source record: 114199

Hello. I was scanning around the 140-150 range about an hour ago when i stumbled on an interesting signal. I heard it on 145.090mhz, and it was a sort of flick going at exactly one second intervals. I was listening on a RS20-176A antenna mounted in my attic and a RSPro-90 handheld attached to it, so reception was fuzzy, but the flick was very pronounced. Also, there was some noise that sounded like it could be the faint remnants of some FSK or other data transmission--it happened at irregular intervals over the one second marks. I heard it starting at around 2200 ET (when i turned my scanner on) and it was practically gone one hour later. I live outside Philadelphia, Pa.
Do you know what this could have been? I've read about low-flying satellites making similar noise, but i'm not sure if this is on the right freq. However, i'd love to find out, so any knowledge is greatly appreciated. thanks,

matt

Source record: 114200

I'm in northern VA and I tuned into 145.090 Mhz and after listening for a few minutes heard a brief transmission that sounded like a data burst of some sort at 2332 and again at 2337 ET. I checked the 2 meter band allocation list and 145.090 MHz is allocated for "simplex and weak signals," so I kind of doubt that this was a satellite.

You're in the middle of the 2 meter ham band. Years ago hams used
drum fax machines that sound exactly like what you're describing.
That may have been it.

Or it could have been something else... ???

Sounds like APRS - Automated Position Reporting System. It's a ham radio operation that uses packet mode to give regular position reports that can be plotted on a map by anyone with the relevant APRS software.

There should be programming buttons on the front.... they are programmed in
BINARY..... the first four digits select the
BAND..... I forget what they are now...
but as an example 0000 might be low band
0010 might be high band and 0100 might be UHF.... in all you need 16 digits to
program one frequency..... lotta work
by todays standards..... but when they first came out in 1975 or 1976 they were
neat!
Bought one new back then.... around $300
as I recall..... seems to me they were only 16 channels tho.....

Phil,
That is quite a compliment to the 895xlt. I was recently ready to fork over the money for one and then I started hearing rumors of a new model to replace the 895. Question: Do you ever miss the WFM on your 895? Also, do you find 20 search lockouts sufficient? After reading Rich's info I really got interested in the 895.

In reality, scanner enthusiasts have had a lot to be thankful lately I'd say. If they come out with a base model with the features of the new 245xlt I may grab one considering the good reputation of the 895xlt.

RE: BUZZARD PEAK 145.460 MHz - UPDATE

I received two informative responses to my post about the BUZZARD PEAK
repeater:

#1

The W6FXN repeater was taken down just before Richard LaBelle became
a silent key.
Neither K6PYP or KC6OKA are coordinated to the frequency pair by TASMA.
The earthquake net is now found on the Flint Peak repeater on
147.705 (-) MHz.

>How do you know if your scanner is doing all it should be able to??
>

By doing just what you did, compare it to another radio (assuming you
don't have test bench equipment, of course).
Radio performance does degrade over the years. I didn't realize how badly
my 9000XLT was performing until I hooked a new Pro-2045 to the same antenna and
scanned some of the same frequencies. The RS2045 heard a ton of stuff the
9000XLT was missing. The 9000XLT is now at Uniden for servicing.
I also had a 3000XLT that I thought was doing okay, but after I replaced
it with a new Sony SC1 I realized that the 3000XLT was missing a lot. That
radio, too, has been returned to Uniden for service by its new owner.

Sluggo ... while I agree with most of what you said, cops do need a way to have secure communications. I was a news photographer years ago and went with the local police and sheriff's dept on several different raids and guess what I saw at some of these homes ??? Yes, it was a scanner, just what wasn't needed or wanted. Thankfully both departments at the time had special low power surveilance frequencies. Now they both use encryption on special things like that ...

I (and most scanner hobbiests, I think) don't really care is a department goes digital, just as long as we can listen to them. There is no need to go digital and encrypted all of the time. It is legal to listen to an un-encrypted digital system. We just need digital caplable scanners made, and I suspect that we will have them somewhere down the road.

You are right, most cops don't know if they are on UHF or VHF or 800 or Trunked, analog or digital and don't care. The cops I know just want a radio that works when they need it.

Just my 2cents ...

Mike

SNIPPED

> (By the way,
> I have already seen the excellent article from CityPaper about
> Philadelphia's proposed digital trunked system.)

First strike against you, that "excellent article" was heavily
biased and contained a series of factual errors being perpetuated
by the anti Motorola crowd (ie. scanner enthusiasts who will be
locked out of monitoring ASTRO digital systems).

For instance the article ERRONEOUSLY pointed the finger at Motorola
for the Kansas City fiasco. The truth of the matter (had the so called
"journalist" bothered to check his facts), was the system in place at
KC was a GE/Ericsson EDACS system. Motorola was NOT awarded the bid at
all (their price came in way above what the city could afford)

However, therein was the problem, the city had 'champagne taste, with
a beer budget'. The outside consultant (Sachs/Freeman Associates) was
accused of writing 'faulty' specifications. The city decided to ignore
their advice, the advice of Motorola, the advice of GE/Ericsson, and
insisted on a certain configuration.....this configuration had very
poor signal strength and the coverage contours did not afford the city
the "expected" coverage parameters....they were warned in other words,
that what they wanted wouldn't work ! But yet, they chose to go ahead
and implement the Ericsson system.

Do you want detailed parameters ? the original specs called for a 33db
signal loss to account for foilage, buildings, hills, etc...this would
equate to a 95% coverage area. Instead KC opted to reduce the margins
to 21.5 db loss factor, causing nothing but horrendous coverage issues.

There were MORE factual errors in that article, but I won't bother
going into them, suffice it to say the author appears to have NOT
done his homework. "Excellent article" my ass ! (more like a "lets
spread lies so maybe we can convince people I know my shit and all
digital systems suck" propaganda piece)

San Diego may be outside of the area of your project, but here it is!
--

800 MHz Transition Team

Exciting changes lie ahead for the San Diego Sheriffï¿½s Department.
Along with many other city and county agencies, the Sheriffï¿½s
Department will at last be able to communicate throughout the entire
region using a new Motorola 800 MHz radio system.

The project, called the Regional Communications System (RCS),
includes the City of Carlsbad, many of the fire protection districts,
and numerous city agencies. What is most exciting about the RCS is the
ability for field units to be able to talk to each other,
regardless of where they are in the county.

http://www.co.san-diego.ca.us/cnty/cntydepts/safety/sheriff/patrol/800mhz/800mhz_1.html

Executive Summary

The RCS Project involves the construction of a regional public safety/public service wireless radio network that will serve as the primary wireless voice and data communication link for over 80 local, county, and state governmental agencies throughout the 4,500 square miles of the County of San Diego.

A total of 43 separate radio microwave repeater sites using over 153 frequency pairs will be included throughout the County to achieve the required radio coverage.

The project will also replace the Sheriffï¿½s Department primary and backup communications dispatch centers with a new building (primary center only), furnishing, computer software, hardware and ancillary equipment.

Project costs of $83 million will fund the following components: radio backbone/microwave, County public safety user equipment, County local government user equipment, Sheriffï¿½s communications center facility, equipment, computer-aided dispatch system upgrade, backup communications center facility upgrade and equipment, a mobile data system and an automatic vehicle location system.

The voice and mobile radio system should be ready for beneficial use by January 1998. Communications Dispatch Center should be ready for occupancy in January 1998. All components of the project are expected to be complete by October 1998. Over 7,000 users are projected to be on the system by the end of 1998.

The RCS will support growth to over 12,000 users, the maximum over the 15 to 20 year system lifespan.

Can I ask what your qualifications are for such a project? (Not
saying you need qualifications, but if you are going to present it
in the manner that you state, it would be nice to have some kind
of technical/engineering training to back up your paper)

I wonder about this, as it already is apparent that at least your
objectivity is in question. The supposed "excellent" CityPaper
article was a onesided, misinformed, out and out incorrect
presentation of innuendo and lies.

You might want to start out your research by checking out those
so-called "facts" brought out in that article.

The lower half of 145MHz is used, in a lot of the US, for amateur radio FM repeater outputs. The stations are typically centered every 10KHz on the odd number. (e.g., 145.07, 145.09, 145.11, 145.15, etc) While there no mandate, typically the lower 5 (145.01, .03, .05, .07, .09) are used for amateur radio packet radio.
Packet is a wireless, ham radio version of the Internet. The flick you heard were probably bursts of digital transmissions. Do a search on "ham radio" and "packet" to find more information about the mode. In order to decode these, you can buy a TNC (terminal node controller) from a company like MFJ and hook it between your radio and your computer. Then you could monitor the data/messages being sent. APRS (Automatic Positioning Radio Service) use packet radio and GPS periodically transmit a stations position. This allows hams to track the position of their mobile friends and has been used in public service events to track important vehicles such as the ambulance or the event coordinator. Of course in the commercial sector the ability to track fleet vehcile or have planes/boats automatically report their position has tremendous applications.

Packet Radio..

It's in a number of areas, and I'm not really a packet person, but if I
remember this right, on 20Kz spacing, there are packet 'channels'
at 145.010, 030, 050, 070 , and 090. There also was (still is?)
TCP/IP packet on 144.910, 930, 950 970, and 990.

This is not the ONLY area to find packet, but the biggest concentration
of it is here.

There is also APRS packet, I believe 144.590???

All these sound like quick modem burst.

You've missed a very basic concept. Philladelphia. The city that makes it's own laws.

I don't want to blast any individual officers from Phily, as I've know a few,
but with ANY big city the bad sometimes get overlooked, and promoted.

Philly could not stand the light of day!

Just one example. Philly tried to illegally overrule state law with regards
to firearms. In the past, sheriff issued licenses to carry were by law valid
everywhere in the state. But the local sheriff office where I lived at the
time posted a BIG warning not to carry in Philly unless you went to the
Philly police and got one from them as well. In DIRECT VIOLATION of
state law at the time.

And if you think they were Gestapo with regards to firearms, you should
hear what they did to scanner people!

Oh man I just realized that you said SIMPLEX, meaning no repeaters
(outside of the mobile relay aforementioned).

Soooo, how the mobile relays would work in a repeater system? The
HT's would have to have a freq. of their own, to activate the mobile
extender, which would then simultaneously transmit on the repeater
input freq., correct? Chances are the HT's would transmit in a
different band, allowing for crossband transmissions so that the
patrol car could use a single combined antenna to both TX and RX at
the same time. Is this close? Please tell me if I'm close or way off
somewhere.

Thanks,
Paul

While I agree with you on this, secure communications in a public
service is still dangerous. I think there ought to be regulations
that if such systems are used, that all secure communications be
recorded and kept on file for at least a year. These recordings
should be made available to both prosecution and defense when trial
comes up.

The bottom line: If and when encryption is used by police, it had
better be for tactical purposes only. The public interest will not be
served unless the contents of those communications are revealed.

The problem is the City of Philadelphia. Where else can you find cops who will fire-bomb a whole city block just to get at one house of whackos?

I'd say there's a much bigger problem in the city than just monitoring by scanner. I've also heard rumors (which I can't confirm) that radio antenna space on towers is practically organized crime. Any attempt at dealing down from the asking price is almost a guarantee that someone will damage your feedline, antenna, or radio gear on a regular basis.

Hey, they didn't make up the phrase "Keystone Cops" in a vacuum...

Not sure about this, but isn't digital transmission by definition
"encrypted?" I suppose you could say that a digital receiver would no more
decrypt the transmission than an analogue one does a regular transmission,
but if the feds are cracking down on MDT receivers, then they must consider
digital to be, for legal purposes, encrypted, right?

What does everyone else think?

Isn't that price a little high? I bought a 2006 with computer control and
software for the same.

5997. Need info for Yupiteru MVT 7100

Newsgroup: rec.radio.scanner
Date: 1999-06-29 00:00:00 UTC
From: rollers@interlog.com
Message-ID: <rollers-2906991028160001@209-20-7-228.dialin.interlog.com>
Source record: 114230

Hello all,

I wonder if someone knows if it is possible to modify the MVT 7100 so the delay function while in scan or search modes are disabled? The 7100 has a permanent delay setting of 2 seconds with the delay function OFF, and a delay time of 4 seconds with the delay option ON. I believe this 2 second delay was incorporated because of a Uniden patent on delay functions?? Is it possible to modify the 7100 so there is no delay time at all?

Thanks in advance

Pete.

>Not sure about this, but isn't digital transmission by definition >"encrypted?" I suppose you could say that a digital receiver would no more >decrypt the transmission than an analogue one does a regular transmission, >but if the feds are cracking down on MDT receivers, then they must consider >digital to be, for legal purposes, encrypted, right?

Depends on whether you're talking to a lawyer or an engineer. In the engineering world, the term "encrypted" means that you're using a mathematical algorithm with the purpose of making the message nearly impossible to decrypt without a key. PGP is an encryption system.

Encoding is where you use a one for one substitution of symbols. ASCII is a code. BAUDOT is a code. MDT is coded too. One form of coding is Modulation. Four state FSK (as used in MDT) is a code.

To an engineer, MDT is a coded system --not encrypted.

Now, if you're a lawyer, you read the definition in several dictionaries and find the one which makes your case. You twist it all over the place in favor of your client, and then you make policy and judgement all over it.

Frankly, intercepting signals is a challenge I can't ignore. I'll try it just because it's a challenge. Of course if you ask me what I'm doing I'll tell you it doesn't work. I like to keep folks guessing.

>somewhere.

Close enough. I use them at work. My employer is a water and sewer utility. Often, state police and utilities need a system which is robust enough to survive a major, area-wide disaster. The nice thing about simplex low band VHF is that it doesn't depend on anything to communicate from A to B. Even as robust as Cellular Telephone or trunking networks can be, there's nothing like a stone simple direct simplex radio.

The handheld radio is also useful where a mobile unit is close to a dead area, such as a manhole. A worker who is by himself can take a radio with him in to the manhole and his vehicle can relay a call for help if he gets in trouble.

Our cars and trucks are equipped with 100 watt transmitters. This system works fairly well. However, sometimes we need more range. In cases like that, our dispatch center has a talk around channel pair which just "happens" to have an audio leak from receiver network to the transmitters. All repeated transmissions are monitored and controlled by the dispatch center. Their audio overrides the mobile units. It's sort of like a "third-party" relay system --not a repeater. We get away with this because our dispatchers are there

24x7x365.

Those are the "repeaters" you hear. It's all legal. It's merely
obscure because the FCC doesn't advertise the regulations.

Thanks to the nature of aircraft (they cross borders easily), if you
have an aircraft scanner, it will work the same pretty much no matter
where you go. Nearly all ICAO (International Civil Aviation
Organization) countries have reserved navigation and communications
frequencies between 108 and 137 MHz.

Have fun!

>going into them, suffice it to say the author appears to have NOT
>done his homework. "Excellent article" my ass ! (more like a "lets
>spread lies so maybe we can convince people I know my shit and all
>digital systems suck" propaganda piece)

Perhaps. Perhaps not.

Digital Radio systems in general are a new and not so exact science. The question isn't the technical nature of these systems, although that is a concern, hopefully the system will be designed to allow an analog failsoft should the system go down for whatever reason.

People said the same things about trunking systems when they came out. Now we have scanners capable of following these systems. I'm sure a digital scanner is on the horizon as well.

The issue at hand, and the reason why this article is a good one, is the perception of the Police department that they have to have a $51 million encrypted digital radio system. A good friend of mine who is now retired from the two-way business after 30 years of success, summed it up like this:

"These new digital systems are ridiculous. If the police chief went to the city council and told them the police needed ferrari's and porsche's to do their jobs, they'd throw him out on his ass. But when the chief asks for one of these new whiz-bang mega-million dollar radio systems, the city council blindly whips out their checkbook and writes him a blank check for the whole thing, when the current radio system is already more than they'll ever need."

Amen. And who pays for these systems? You and me, everytime we pay sales tax for anything. These cities whine and cry to the federal government for money to hire new cops, but have no problem paying for their proverbial Ferrari of a radio system with their own taxpayer dollars.

Maybe the article wasn't technically accurate, but the overal gist of the article is right on. Personally, I have nothing against a well planned, digital radio system, but it needs to be open, in other words, not encrypted (except when encryption is necessary, like when conducting raids, etc.) And the whole attitude shown by the deputy commissioner towards his block watchers just sucks. Clue these guys in on this new system, provide them with radio equipment so they can continue to help their community, dammit! Is that so difficult a thing to do? After all THEY are the ones who are paying for this technological beast.... right?

I stand behind my original comments - the article was done quite well, despite the technical errors and omissions you mentioned. If Motorola wants to build public safety systems for use in this country then they'd better make it a point to make it work. Flawlessly.

The call will go through a Mobile Switch, even if it then goes back to
the same Base Transmitting Site.

>That's WHY Fat Freddy calls Nasty Nev mobile to mobile, to make it
>HARD for the good guys.

Not very hard, if the good guys know the number of either of them then
they only need to have all calls to or from them copied to a monitoring
site.

Whatever that means, no one is quite sure. The owner and buyer for the
distributor (largest in U.S.) was just in China or Japan visiting
Uniden. I guess you could say they have some inside info maybe??!!
There are a lot of rumors, we will post facts when we get them.

Check out RadioMax from www.futurescanning.com This software controls
and also records audio-works with the 895XLT. They sell a cable for
the 895XLT. We are not affiliated with them.

hello, I have a realistic pro-35 portable.
It scans and picks up frequencies for about 10 minutes. then it
continues scanning, but it does not pick up any frequencies.

I have taken it to the local radio shack for repairs 2 times,
it functions properly for about 2 months, then it starts
with the same problem again. can anybody please recommend agood repair shop
in N.Y.C.

I live in the Bronx, any inf. or advice would be appreciated
I'm tired of getting ripped off by radio shack

Source record: 114260

I'm looking to pick up a new scanner and had pretty much
decided on the BC235xlt when I stumbled across the 245.
Looking at the best web prices I could find, there is only a
$30 difference between the two ($220 for the 245 vs $190 for the 235).
The only plus I can see for the 235 over the 245 is that it comes
standard with two battery packs vs only one for the 245.

Other than having to have one RIGHT NOW, is there any reason to buy
a 235 over a 245?

Thanks.

Add an Opto-456 Lite board for the ulitmate in computer controlled
scanning. I recommed using Probe 5.0 as the software of choice with the Opto
board. Check out www.optoelectronics.com
It's once of the best combinations around. Also check out Steve Hancock's
site at:

http://home.ptd.net/~pro2006/index.html

has a lot of good info on the 2006, Probe, and other scanning software.

Dan

Please Remember the "Wintone Buyer Beware" messages that were posted about a year ago in these groups. This guy doesn't give you the serial number when you pay for the program. I paid about a year ago to have the program sent to me on disk and haven't received it YET. I did email the guy and he did send me the serial number but I never receive what I originally paid for and that was a registered copy to be sent to me on a disk. I do feel luck though because I know other people had this problem and never got their serial number for the program.

No folly, the switch *must* know who it is routing to whome, easy enough for it to also T off all calls from Fat Freedy or all calls to Nasty Nev to The Men In Black. OK It's not a physical case of croc clips on a strowger frame but the effect is the same.

> and the futilty of attempting to tap Fat Freddy's mobile call to Nasty
> Neville's mobile at any point other than off-air.

This strikes me as even more futile as you need to know where Fat Freddy is, and keep up with him, probably within a mile or so. Then of course the handset is frequency agile and will hop channels as and when... It's still far far easier to apply the tap in the switch.

>a 235 over a 245?
>
>

No, and there are LOTS of reasons to buy the 245XLT over the 235XLT.

1. the 245XLT will do trunking and conventional scanning at the same time, the 235XLT will not.

2. the 245XLT can be computer controlled, the 235XLT cannot.

3. the 245XLT will track both Motorola and GE/Ericsson trunked systems, the 235XLT only tracks Moto systems.

4. the 245XLT will track trunked systems on VHF, UHF, 800 and 900MHz - the 235XLT only does 800MHz systems.

There are plenty more reasons, but these are the major ones. Order your 245XLT now and get on a waiting list. The radios should be available by mid-July.

Try alt.family.radio. They covered this topic in some depth, including
letters from appropriate Canadian authorities. As I remember you can
own the radio, but cannot use it since the frequencies were not set
aside by the Canadian Gov't for public use.

If you picked up a satellite then you would have to downshift in frequency to keep tracking it due to doppler shifting.
Also, the satellite would probably be listenable for something like 5-10 minutes instead of the hour you report.
Probably just someone throwing packets.

I don't believe GRE sells scanners. They build scanners that are sold by RadioShack, Optoelectronics, etc. such as the Pro-43 or the Optocom. I believe GRE does have a website, but I don't remember the URL. When I visited their site there wasn't much to see anyhow. There were a few scanner accessories that had the GRE name on them, but I don't know if any are still being sold. Check with www.grove-ent.com to see if they are still selling GRE accessory type products.

Weird, I have a pentium 133 with only 16mb of ram and it has run just fine,
so not being a computer genius I won't even tread any further.

For Sale:

Realistic Pro-2005 400 channel scanner. Just like the Pro-2006, only slightly slower scan speed. Radio is in good condition cosmetically and electronically. Works well. Mod to restore full 800 MHz as it was designed has been performed. $275 obo.

15:00 CST St. Louis, MO. USA

BC245's just got loaded on the truck in Texas from Uniden Corporation.

Advanced Digital will be shipping customer orders as early as Friday of this
week; and no later than Tuesday of next week (Monday the carriers are only
accepting priority-overnight shipments due to the holiday).

As expected, we received 70% of what was ordered, so I would expect most

dealers to be out of stock almost immediately; with the balance from Uniden
currently unknown. . .

>FREE licenses. I have even read posts from people that think that ANY

Hope my replies to your posts aren't seen by you as flaming, Joey, as that's not my intent...but...free license? No, not here, anyway.

As I mentioned in an earlier post, I've already passed a test of the type the VEs administer to would-be no-code techs. It wasn't administered by VEs, it was unofficial, I had two members of the local ham radio club do this to prove a point to them. Reason: The VEs associated with this club won't administer a test unless you first attend their classes for two months...which are held starting at 7 PM every Tuesday night...and I don't get out of work until 7 PM and couldn't possibly be thre until 7:30 even if I skipped dinner to do it, which after a 12-hour work day I'm not about to do. To demonstrate the stupidity of this to two members of this club I had them give me a no-code written test unofficially, and had it been a real test I'd have my Tech ticket now.

If I ever did get a ham ticket, my sole reason for wanting to do so would be to get on 6 meters, which I can already do without the code. Where I live, I don't have room on this small suburban lot to do much of anything antenna-wise anyway, but on 6 meters a decent antenna isn't much bigger than a TV antenna. Unfortunately, in order to do that, I have to deal with the local ham club and their snotty attitude towards potential and current no-code licensees. Interestingly enough, some of these clods are Advanced-class licensees who ten years ago were on the local BBSes asking ME questions about constructing antennas for HF. In fact, I was enjoying radio as a hobby before a few of these clowns were even born.

Twelve years ago, when I was 29, I gave a 14-year old kid on a BBS (gave him for free) the plans for a tunable preselector that I'd built myself. Now today I'm 41, this person is 26 and is one of the VEs who won't test techs unless they attend the club's classes first, which means joining the group, paying their monthly dues, and putting up with all the politics that I do not have time for being the father of three kids aged 11 and under. All this because of Morse code...what a load of elephant droppings.

So, thanks, but no thanks, I'll continue to enjoy my SWL and scanning activities along with a smattering of AM BCB DX'ing thrown in for an

occasional change of pace. But when I run into this Advanced VE here on the Internet and he wants the plans for the active antenna I'm currently working on building, I hope for his sake that he has a large jar of petroleum jelly handy, for reasons that should be readily discernable upon a few moments of reflection.

Source record: 114091

...this stupid thread.

I'm serious, the way everyone's been carrying on in here, you've probably chased away hundreds of people who were considering becoming hams.

I know that if this is how I'll be treated for getting a no-code license than you can keep the whole damn thing. What a way to make friends, take someone who just spend a big wad of his/her hard earned money buying into the amateur radio HOBBY (that's what it is, remember?) and treat them like crap unless they go all out and get the Ultimate License and half a house full of gear. Way ta go, geniuses...That'll keep new blood coming in for years to come... not.

Wake up people. Ham radio is a hobby, not a social club. Whether you have a no code license and a $200 HT, or spend thousands on equipment and have a fistful of licenses, you are all hobbyists in the same hobby, in it for the same reason. It's supposed to be fun, remember? Take the fun away, and it becomes nothing more than an unnecessary expense, and pretty soon your gear will end up on ebay or rec.radio.swap. Judging from the amount of postings in these two forums alone, I'd say alot more people are getting out than coming in.

Food for thought.

You can add to that list the various beacons used to test for HF
propagation such as those operated by NCDXF.IARU on 20, 17, 15, 12,
and 10 meters, as well as the transmissions from K1MAN on 20, 40, and
80 meters in connection with the ARRA/IAN, and WA3NAN's retransmission
of live space shuttle audio on several frequencies during space
shuttle missions.

Certainly the above are not two-way comms with other radio amateurs,
but they are nonetheless permitted, primarily because they provide a
service of one kind or another to the amateur community and/or to
hobby radio in general.

>in learning Morse. I merely stated that I refused to waste my time
>learning about a method of communication that was invented over 200
>years ago

What a terrible waste of time it must have been for you to learn
English, and how frustrating it must have been for you to have to learn
to type before you could use a computer.

>Well, in my own case, any time spent praticing Morse would have to be
>taken away from my SWL and scanning activities, which time is already
>to little for me to be willing to even consider it.

Bullshit. In the time you've wasted reading and posting to this thread,
you could have learned several letters of the code.

>than a ham. The reason I don't want a ham license is that, quite
>frankly, I have zero interest in Morse as a method of communication, I

Lots of hams feel that way too. Nobody forces us to use it.

>haven't they?). However, given the attitude of numerous hams towards
>Tech licensees, well...I'd just as soon not have to associate with
>that lot. Thre are a lot of Extra, Advanced, and General class hams
>who seem to feel Techs aren't REAL hams at all...and yet, while many

And there are far more who don't feel that way. This is a specious
argument. In fact, if all the people who've used this excuse would
actually get a ham ticket, they could all hang out with each other and
never have to interact with all those allegedly cranky old hams who
actually took the trouble to get a license when it involved some actual
work.

>of these same hams can chatter away at 20 or 30 WPM morse, ask them to
>sit down in front of a computer and install Windows 98 and a
>compendium of packet radio software, and their eyes glaze over.

Another canard you'd have a difficult time proving. Not that it's
relevant to anything at all. It's just another straw man to let you
pretend that learning Morse is preventing you from getting a ham ticket.

>Given the current state of communications technology, I'd say the
>ability to set up packet software is a heck of a lot more relevant to
>modern hamming than pounding brass...so just who are the REAL hams?

The folks like me who did the work required to get a ham license. It's
far easier now than it was then, of course.

>The bottom line is this...Morse may have been great 30 years ago, but

Morse sucked 30 years ago.

>with the advent of laptop computers that are smaller than your
>telephone book and pack more computing power than mainframes of 30
>years ago, I think it's safe to say that the future of ham radio, if
>any, does NOT rest with CW. Continuing to insist that it does will

It never did, and nobody's saying that. Another straw man.

>only cause more and more people to turn away from ham radio, and as
>the number of hams on HF decreases accordingly, the amount of
>bandwidth allocated to the service will decrease accordingly until
>there's nothing left.

Here's a huge clue, kid. Morse code is NOT what's causing the demise of
ham radio. You could give out free ham tickets at every Radio Shack in
the country, and ham radio would still be declining over the long term.

>At that point, if you and I are still around to see it, you can
>explain to me why retaining the code requirement was in the best
>interests of the hobby...I'll be the guy listening to Navy, Air Force,
>and Coast Guard comms on HF, VHF, and UHF while laughing my fanny off
>at the hams who choked to death the goose that laid their golden egg.

No, you'll be the guy who was too damn lazy to spend a few minutes a day
to get a ham ticket. I'll be the guy who can do everything you are
doing, in addition to having every privilege allowed to hams. Even if I
don't even use ham radio any more, I will have the knowledge that I did
it because I wanted to, not because somebody gave it to me. I'll also
have all the memories of the things I've learned, the people I've
helped, the clubs and comm systems I've helped to develop, and last but
not least, all the good friends I've made. I'll be the one laughing.

Stay away from ham radio, kid. We don't need whiners like you in our
hobby. We have more than enough of those already.

>73 DE KNY2VS

What a pretentious sig. A ham wannabee who tries to get a bit of
reflected glory by using a "call sign" that looks like a ham call.
Pathetic.

6068. Freqs for Ft McCoy, WI ?

Newsgroup: rec.radio.scanner
Date: 1999-06-30 00:00:00 UTC
From: ope1canoli@aol.com
Message-ID: <19990630171613.18284.00005857@ng-ft1.aol.com>
Source record: 114102

Im headed up to Ft McCoy for 2 weeks and was wondering if anyone would know where I might get some freqs for the area. I have the county freqs but Im specifically looking for the Federal Police freqs on Ft McCoy. They dont have an MP company there, but instead use federal officers for protective services. Any help you can give would be appreciated.

Thanks

Tom Montgomery

Thanks, jeff, for your response. It all makes sense and it's what i originally figured, but i have one question--what is the FSK converter (data slicer) for? While i'm relatively new to digital communications, it has been my understanding that FSK is an audio tone modulated to different frequencies, each one representative of a piece of information (the information it represents is dependent on the protocol). Am I correct? If so, can't I use a spectrogram to plot the different freq. tones and their durations, and then link each to its meaning? I know this would be tedious, but is it theoretically possible?

It's all the same people. Megahertz and megacycles are the same things. We use MHz mostly here in the states whereas megacycles seems to be a common term in Europe.

get caught doing other things on the local network besides reading your
mail. =)
for example you can clock in from a computer. You just need to know the
program.
now. lets say i connect to a machine in a different time zone. I have
access to all programs on that computer. Guess what. Run the clock in and
out program and clock out. And 4 hours later than what you really left.

but if they find out
they will quickly let you go.

>

Yep....and it happened in the last 10 minutes of the auction. I had some
serious contenders on that one. This guy wanted it so bad he could taste it.
It looked brand new, and I hated to sell it, but I already have one with a
456 board and needed the cash to buy some new ham toys.
Scanners tend to sell at premium prices on the auctions if you have good
photos and are up-front with the description.
Take a look on eBay and see what the Pro-60's have been going for and that
will give you an idea of what yours might be worth.

There are many ways to send digital data. Do a search on some ham radio pages for a program called Hamcom. That is where the interface circuit comes from that is heard so much about here. It is just an op amp running at full gain so that you get a bunch of pulses out of a signal. It just converts the small signals to the levels required of the rs232 input of a serial port.

Some of the FSK just switches between 2 tones and does it several times for each symble to be displayed. It might go something like this where the 1 is one tone and the 0 is another. 1100011 1110001 YOu then look up the places where the pulses match this in a table and convert to the symble repersented by the sequence. Some are varitable length and sometimes there will be just a long sequence with out any breaks. Depends on the code. Most are published somewhere.

If you had a storage scope, this could be done very easy for one character at a time for some systems. There are some programs out , maybe the hamcom program has this display, I have seen so many that the capabilities of each run togeter, that has this type of display as an option.

Source record: 114118

I have a Uniden Bearcat BC80XLT for sale. It is in very good condition cosmetically, showing only light marks from light use over the past 6 month. It was used in congunction with my BC235XLT to scan the other non-trunked frequencies. It comes complete with antenna, earphone, manual, ac adapter and belt clip already installed. It is working as it did when I bought it brand new some 6 months ago. I have a photo I can e-mail you if you would like.

This scanner has 50 programmable channels in 5 banks and does cover the 800MHZ band.

This unit normally sells for about $130 and I am asking $75 and this includes shipping to your door (or PO box.)

Please e-mail me privately if you are interested.

From: spoiler1 <spoiler1@earthlink.net>
Message-ID: <377AC063.6E586CF4@earthlink.net>
Source record: 114120

Hi all
Am contemplating buying a ICOM R2 I have been looking for information and haven't found much other than the tech specs at the ICOM site. I have a couple of questions
if someone that currently owns one would be willing to answer for me.

1. I know there are 8 banks of 50 can they be linked or can you selectively scan more than one bank at a time?

2. Does it accept a standard 1/8 earphone directly without an adapter?

3. Is it tedious to program without the computer software?

4. Can you enter Alpha tags?

5. Are you happly with the unit?

Thanks in advance

Lemme see.... Friday, July 2 is a holiday for some American businesses. Monday, July 5 is the "official" observance date of Independence Day for most businesses because the Fourth falls on Sunday this year.

I'm not sure I believe that Uniden is going to spend the holiday weekend shipping scanners. There may not be much commercial shipping capacity available.

In most cases, the "converter" simply adjusts voltage levels from the radio signal levels to the computer serial port levels. Level converter circuits generally include some filtering so the signal is as "clean" as possible when the computer gets it.

>While i'm relatively new to digital communications, it has been my
>understanding that FSK is an audio tone modulated to different frequencies,

That describes AFSK (AUDIO Frequency Shift Keying). In true FSK, the frequency of the carrier itself is changed to represent different digital values (0 and 1 in basic digital modes).

Message-ID: <MPG.11e4788c3ed755af989812@news.earthlink.net>
Source record: 114124

Well the long and short of it is that the R2 is the "most sensitive" scanner currently available on the market. Even more so then the venerable MVT-7100. I does have a touch of intermod in the 450-490mhz range, but is virtually eliminated with the attenuator on. You can and will hear things with the R2 that many other don't even know is there. You can't beat the size and yes it uses a standard 1/8th inch plug as well. Once you figure out the programming sequence, it is as easy as pie, although the stock instructions don't make it quite that easy. All in all a incredible buy for the price and a must have in the shack.

Don't give up hope for a PRO-2004 backlight just yet. I'm
working on making a composite backlight using EL material
from Limelight nightlights. Since I don't own a 2004 (yet),
I need exact dimensions, or better yet, a dead EL from one.
Make ya a heck of a deal if someone can send me one. ;-)

Please reply directly if you have one available to rc123@gnc.net
Robert

There are a couple options, you can grab you local yellow pages and look under Batteries for a area business that sells replacement inserts for battery packs. You can usually expect to pay about $15-$20 for the insert and will probably have to do some soldering work (not that complicated). The store may be willing to do all of the work for you for a fee if you aren't too handy with a soldering iron. There is a company on the internet "Primecell" that sells replacement inserts, including the NiMiH, for a reasonable price. The only drawback is they are a bit slow with the shipping process. But either way, you can replace the battery in your 3000xlt without it costing a fortune.

Well I have yet to find a good radio repair shop local, the only one I would recommend happens to be in NY, G & G Communications (http://www.iinc.com/ggcomm/). They are a bit slow as far as getting time to look at your radio, but last time I talked to Jerry he said he averages about a month backlog. I have sent scanners to them and had them returned with no bill if they couldn't repair them, and also had work done on other items that was reasonable.

Is your computer still SMOKING Mike? I said something aalong these lines, and I got flamed unmercifully! My gosh, I never would have believed that with the creation of the NO-CODE license, would come such a clamor from people wanting FREE licenses. I have even read posts from people that think that ANY examination is 'UNCONSTITUTIONAL'!!!! Believe that? I took, and passed a 5 WPM CW test 26 years ago. Four years later, I passed a 13 WPM code test in the FACE of an FCC AGENT! And people nowadays THINK THEY have it tough! Im telling you, back then, that 13 test was ONLY given by the FCC. And they kinda make you nervous. Not exactly like being at GRANDMA'S DINNER TABLE...They didn't SMILE, or offer you ANY encouragement! And those that failed, didn't get any, "SORRY, MAYBE YOU WILL GET IT NEXT TIME" crap. These people that refuse to learn Morse,

are not serious about getting a better Ham License. let them stay where they are! ... Joey

> Ok, it's digital, but is it Encrypted?

Yes and no. Some people have told me that the system is encrypted, and some have told me it is only digital. When we were trained on the new radio system we were told some talk groups are digital, some talk groups are digital & encrypted, and some of the talk groups are in the clear. I believe that all of the county's law enforcement dispatch and tactical talk groups are digital and encrypted. We were even told that some of our talk groups were secure from other agencies on the system, and used unique encryption keys. I'm not sure about the various law enforcement command & tactical talk groups as every law enforcement radio on the system has them. All of the mutual aid command & tactical talk groups are in the clear, as (I guess) several departments on the system did not want to pay the extra money for digital or encryption capable radios. If a major incident erupts, most of the communications will most likely be switched to the mutual aid talk groups to allow coordination between agencies (fire, police, medical, etc).

The first thing I will ask you is, are you a Ham operator? This sounds like something a CBer would write, that is FRUSTRATED because of the MORSE REQUIREMENT to get a HIGHER class Ham license. Is this the case? Are you fuming because the WHOLE WORLD still requires MORSE for Hams to communicate on the HF bands? I fully believe that with all the whimpering and pouting from would be Hams, if the FCC 'COULD', it WOULD throw out morse code as a requirement. But the fact is, THEY CAN'T!!!! Get it? They CANNOT! You might as well face it, as long as the WORLD community wants MORSE, WE will have it too. I personally don't see what is so stinking difficult about it. I learned it when I was 10 YEARS OLD! I could do 15 WPM (receive) when I was 14. You learned to TYPE, didn't you? But then, THAT was voluntary. CW is a REQUIREMENT for anything except an entry level Ham license. If you can learn to TYPE, you can learn CW. If people would spend as much time PRACTICING morse code, as they do BITCHING about it, they would have their licenses before they knew it. MORSE, MORSE, MORSE...I am one of those 'CODE GEEK HAMS', and I don't want to see one Cycle of those UNUSED frequencies go to the likes of CBers, or Multimillion Dollar companies like UPS. I am not just addressing YOU, but everyone that uses MORSE CODE as an excuse to remain CB. Just remember, the FCC might MODIFY the code requirement, but they WON'T dispose of it. Those waiting on that, might as well have 'CB' tattooed on their forearms...Joey

You are right about United Parcel Service getting 220 to 222 mhz. But you forgot to mention the REAL reason this spectrum was REALLOCATED. It wasn't JUST because of lack of interest by the Ham community, but because of UPS'S MONEY! UPS BOUGHT that stinking frequency range! Ever heard the old adage, MONEY TALKS, BULL#$%$ WALKS? And this POLICING THE RANKS...By this do you mean, reporting someone you hear cursing to the FCC? What else can ANYONE do? You can't go to their house and tear down their antenna, snatch them out of their house and BEAT them, etc...So it really boils down to FCC enforcement, which, unfortunately is lacking...

Hey, I have been looking for someone ELSE that built something from Ramsey. I like their stuff too. I have buit their little 2 meter power amp kit, and I tuned it up with a bird, and threw it on the floor of my car. It has been working GREAT there for over 3 years. By the way, being that you built that Freq counter, can you tell me the frequency of the timebase crystal it uses? Thanks, Joey

Hi Rob,

Nice pick up. But before buying it I strongly reccomend you to give a close look to the new model (9000 MKII). The Mark II version has a descrambler feature on it and the scanner is now all silver gray (but this is irrelevant). Furthermore, check also the mods made by Bandercom. I have a Yupi 9000 with a Discriminator Output, scan rate enhanced to 45 freq/sec, flashing LED on top panel that informs when squelch is open (for nite ops) or scanner is idle (steady light).
It's the best handheld ever. The only lack is the duckie antenna. It sucks. Only good in the 900 Mhz range.
All the best and good buy.

Kevin

>Burt Smith, BurtonS961@AOL.com

If you look in the June 99 issue of monitoring times.

recieved F=(display F * 1.5) + 133.35

so 490 to 510 Mhz with steps of 20

Kind of strange how the 30 khz steps are steped down to 20 khz steps.
Is this a bug or a feature?

I was wondering if it is possible to decode an pager protocol with just a reciever, a spectrogram program, and a copy of the protocol. I've been looking around on the net (halfheartedly) for a clear description of any of the standard US paging protocol, but i haven't been able to find one useful enough. Is decoding impossible (extremely difficult) without a program like POC 32? I appreciate your help very much.
take care,
matt

For sale:
Realistic Pro-2006 scanner, installed Optoelectronics OS-456 and
Scanstar Professional software (for IBM PC) version 3.44

All one owner, bought on 9/14/94. I have the original receipts for
all three.

Included:
- Original owners manual for all three as well as Realistic
Service manual for 2006.
- Serial cable for connection of PC to OS456/2006 and original telescoping
antenna.

Pro-2006 is in perfect working and cosmetic condition, backlight
hardly used and in perfect condition because the unit was almost
always computer controlled.

$450.00 plus shipping/handling/insurance for all

Michael Staples

I would be willing to bet that the developers of these programs (POC32,
PD-204, Semasoft, pocflex, winflex, etc.) spent many hours decoding the
protocols by hand as they were debugging their code. So, Yes, it is
possible and probably very tedious.

All you really need is something to translate the FSK RF data to 1's and
0's (like a scanner with a data slicer), detailed knowledge of the
protocol, and enough time and energy to convert all of the 1's and 0's
into pager messages.

I would also be willing to bet that, whether you use a computer to
display messages, a modified pager to display messages, or hand decode
the messages, all of these activities would be considered illegal in the
U.S. (if you used the information for your own gain, or redistributed
the information to others).

Unproto (un-protocol or non-connected) packets have not been deemed to
constitute a "broadcast" in a sense that would violate Part 97. Similar
regulatory theory as is applied to code practice and ARRL bulletins.

I'm aware of the current ITU agreements upon which the requirements of
Part 97 are based. I'm also aware that technically, the FCC has
already violated those agreements by issuing CB licenses back in the
era of 1958 thru 1977 to persons who then proceeded to operate on HF
frequencies without having demonstrated any knowledge of Morse
whatsoever...a practice which continues today without licensing.

>don't see what is so stinking difficult about it. I learned it when I was 10
>YEARS OLD! I could do 15 WPM (receive) when I was 14. You learned to TYPE,
>didn't you? But then, THAT was voluntary. CW is a REQUIREMENT for anything
>except an entry level Ham license. If you can learn to TYPE, you can learn CW.

I made no comments whatsoever about the degree of difficulty involved
in learning Morse. I merely stated that I refused to waste my time
learning about a method of communication that was invented over 200
years ago for the sole purpose of sending messages over a hardwire
telegraph system.

It also occurs to me that, if I were a ham operator, I ceertainly
don't think that I'd be too interested in sending messages in dits and
dahs at 5 words per minute when there are certainly more efficient
ways to send messages - the use of the human voice among them along
with various digital modes.

I did not waste my time learning how to drive a horse-drawn carriage
before getting a license to drive a car, and for the same reasons, if
I ever do decide to get a ham license, I will not waste any time
learning Morse, either.

>If people would spend as much time PRACTICING morse code, as they do BITCHING

>CODE as an excuse to remain CB. Just remember, the FCC might MODIFY the code
>requirement, but they WON'T dispose of it. Those waiting on that, might as well
>have 'CB' tattooed on their forearms...Joey

Well, in my own case, any time spent praticing Morse would have to be taken away from my SWL and scanning activities, which time is already to little for me to be willing to even consider it.

As for unused spectrum going to the likes of CBers, well, once again, judging from some of the stuff I've heard on 20m, 40m, and 80m, that's already happened...and as for UPS, that's also already happened with a portion of the spectrum that was formerly a part of 1.25 meters.

With regard to using Morse as an excuse to remain CB, I don't. Nor do I use it as an excuse to remain an SWL and scanner enthusiast rather than a ham. The reason I don't want a ham license is that, quite frankly, I have zero interest in Morse as a method of communication, I feel it is obsolete and its capabilities are exceeded by a number of other more modern methods of communication, and thus my only interest in a ham ticket would be the no-code tech (oh yes, by the way, the FCC has indeed DISPOSED of the code for that particular license class, haven't they?). However, given the attitude of numerous hams towards Tech licensees, well...I'd just as soon not have to associate with that lot. Thre are a lot of Extra, Advanced, and General class hams who seem to feel Techs aren't REAL hams at all...and yet, while many of these same hams can chatter away at 20 or 30 WPM morse, ask them to sit down in front of a computer and install Windows 98 and a compendium of packet radio software, and their eyes glaze over.

Given the current state of communications technology, I'd say the ability to set up packet software is a heck of a lot more relevant to modern hamming than pounding brass...so just who are the REAL hams?

The bottom line is this...Morse may have been great 30 years ago, but with the advent of laptop computers that are smaller than your telephone book and pack more computing power than mainframes of 30 years ago, I think it's safe to say that the future of ham radio, if any, does NOT rest with CW. Continuing to insist that it does will only cause more and more people to turn away from ham radio, and as the number of hams on HF decreases accordingly, the amount of bandwidth allocated to the service will decrease accordingly until there's nothing left.

At that point, if you and I are still around to see it, you can explain to me why retaining the code requirement was in the best interests of the hobby...I'll be the guy listening to Navy, Air Force, and Coast Guard comms on HF, VHF, and UHF while laughing my fanny off at the hams who choked to death the goose that laid their golden egg.

>forgot to mention the REAL reason this spectrum was REALLOCATED. It wasn't JUST
>because of lack of interest by the Ham community, but because of UPS'S MONEY!
>UPS BOUGHT that stinking frequency range!

I seem to recall two things when this happened...number one, that UPS's response to the FCC's Proposed Notice Of Rulemaking was actually received by FCC *after* the supposed deadline for comments to said notice, and number two, that the FCC stated that a primary reason for going ahead with the reallocation despite the objections of the amateur radio community was "widespread disuse of the frequencies in question" or words to that effect.

Today there is a similar situation in many areas on 6 meters, and utilization of the amateur radio allocations above 900 MHz is sparse or in some cases nonexistent. And these are bands that are fair game for no-code licensees!

On the other hand, the current situation for operating privileges for the various license classes seems kind of screwed up to me anyway. On 40 and 80 a Novice can work the world using...what is it, 75 watts max on CW? Yet the same novice cannot pick up a 500 milliwatt HT and talk to the guy down the street on 2 meters. Makes sense...NOT!

>TALKS, BULL#$%$ WALKS? And this POLICING THE RANKS...By this do you mean,
>reporting someone you hear cursing to the FCC? What else can ANYONE do? You
>can't go to their house and tear down their antenna, snatch them out of their

>unfortunately is lacking...

Yes, this is exactly what I mean, Joey. FCC's Compliance and Information Bureau (CIB) is down to just ONE remaining HF manned monitoring station. The network of HF monitoring stations is still equipped, but everything is remoted from the Columbia Operations Center in Maryland (during business hours anyway...at other times CIB's Communications and Crisis Management Center at FCC HQ in Washington, DC takes over). There's sometimes just one person on duty here, and that's a lot of territory for one person to cover, regardless of how well-equipped he or she is.

The FCC does, however, still respond to complaints. You may not want to go to someone's house and tear down their antenna and so forth, but a local ham club could most certainly hit the bricks with the appropriate RDF equipment, locate the offending party, perhaps get the

ARRL's section coordinator and Official Observers and whatever other self-policing machinery the amateur community has at its disposal, and then go to the FCC with a mountain of evidence and let CIB take it from there. It would be one way of getting such buttheads off the air, or at least provide a deterrent for would-be offenders to think about before firing up the tools of their nefarious trade.

That's why I download headers first, cull out the garbage threads,
then download the bodies of only the messages I actually want to read.
On some days I might get 200 headers and only read 5 messages. After
you've been around awhile you learn to spot the spammers and the
morons from the subject headers and the phony addresses they use to
try to conceal their real identities.

I think the anonymity plays a big part...they type a phony address
into the options setup in their NNTP client, then figure that since
nobody knows their true identity, they have carte blanche to indulge a
lifelong fantasy of being able to act like a complete imbecile and get
away with it.

>I would never let myself get sucked into this kind of behavior. Some of
>these people have been fighting back and forth for a long time. I used to
>see some of them going back and forth on Fido-net. Some of the same ones
>that are here now.

I used to read a few Fight-O-Net echos myself, some years back, and I
have to agree with you. Some of the names I see in various newsgroups
belong to many of the same people I remember from Fido, and in many
cases, they're even bigger knotheads here than they were on Fido.

Perhaps the capacity of a moron's brain to spout drivel is directly
proportional to the size of said moron's audience...however, I'm sure
that's a topic better suited to a different group...wouldn't want The
Moderator to flame me for posting off-topic, now, would I? ;-)

>
>This is not a ROOM!

I let this one slide the first time through, but...correct, Joey! The term "room" here on the Internet is generally used to refer to realtime discussions such as those conducted in the AOL chat "rooms" or on IRC (Internet Relay Chat...though most knowledeable IRC users refer to them as "channels" rather than "rooms".

With respect to the relevancy of discussing this issue in a scanner-related Usenet newsgroup, the six scanners that I currently have in my shack are collectively capable of receiving all or part of six different amateur radio bands: 10m, 6m, 2m, 1.25m, 70cm, and 35cm.

It's worth noting that only one of those bands - 10m - requires potential users thereof to demonstrate any proficiency in Morse code. The other 5 bands can also be worked with a no-code Technician class license. The remaining HF bands are covered by my two HF receivers, but that's a topic for rec.radio.shortwave - and in any event, this is at least a radio-related topic which makes it a lot more relevant than the porno spam I seem to get along with the legitimate posts here in this newsgroup.

I will commend gdfthr768@aol.com for having the cojones to put up with AOL's clumsy interface to the newsgroups which they shove down their customers' throats in lieu of a real NNTP client...but also, he should be reminded that this (fortunately) is not Fight-O-Net...and there are far worse evils here to gripe about than discussing ham radio in a newsgroup whose topic is the scaners I can use to receive all or parts of half a dozen ham bands. :-)

Come to think of it...a test of typing proficiency might make a better test of fitness for participation in amateur activities than a test of CW proficiency, particularly if one's interests in ham radio lie more in the area of packet radio than that of pounding brass.

So...if you want a license to use CW, you get a code test. If you want a license to work RTTY, you get a typing test. If you want a license to work phone, you get tested on your ability to speak and to understand the spoken word. If you want to work packet radio using your computer, we'll test your ability to connect the appropriate hardware to, and install the necessary software on, a computer. If you want a license so you can talk through an amateur radio satellite using your HT, we'll test your ability to install and use a suitable satellite tracking program...and so on for various activities that hams engage in. At least then the testing would be relevant in that the potential licensee would be tested on skills that are relative to his or her intended use of the spectrum allocated to the pursuit of such interests.

I just ignore the garbage. The radio newsgroups are very interesting, and
you can still gain a lot of knowledge. I have been reading them for a
couple of years now. You can pretty much tell when someting is worth
reading or not, by the subject. I don't understand why people behave the
way they do on the newsgroups. I don't think people would behave this way
in person.

I would never let myself get sucked into this kind of behavior. Some of
these people have been fighting back and forth for a long time. I used to
see some of them going back and forth on Fido-net. Some of the same ones
that are here now.

Matt,

What you heard was Ham radio Packet. It is a digital form of
communications. The frequency of 145.09 Mhz, is used around the country.
Also common is 145.01, 145.03, 145.05, 145.07, 145.51, and others.
APRS is on 145.39. Do a search on packet, you will find a ton of
information.
